The customer is God. Professional-Cloud-DevOps-Engineer learning dumps provide all customers with high quality after-sales service. After your payment is successful, we will dispatch a dedicated IT staff to provide online remote assistance for you to solve problems in the process of download and installation. During your studies, Professional-Cloud-DevOps-Engineer study tool will provide you with efficient 24-hour online services. You can email us anytime, anywhere to ask any questions you have about our Professional-Cloud-DevOps-Engineer Study Tool. At the same time, our industry experts will continue to update and supplement Professional-Cloud-DevOps-Engineer test question according to changes in the exam outline, so that you can concentrate on completing the review of all exam content without having to pay attention to changes in the outside world.

The Google Professional-Cloud-DevOps-Engineer exam consists of multiple-choice questions that test the candidate's knowledge and understanding of various cloud computing concepts and tools. Professional-Cloud-DevOps-Engineer exam is designed to assess the candidate's ability to design and implement scalable and secure cloud solutions using best practices and industry standards. Professional-Cloud-DevOps-Engineer exam takes approximately two hours to complete, and candidates must achieve a passing score of 70% or higher to receive certification. The Google Professional-Cloud-DevOps-Engineer Certification is a valuable credential for professionals who want to demonstrate their expertise in cloud DevOps engineering and advance their careers in this field.

The Google Professional Cloud DevOps Engineer exam is taken by the specialists who want to obtain international certification and get validated as professional engineers who can manage Cloud DevOps features.

2025 Useful Professional-Cloud-DevOps-Engineer – 100% Free Valid Examcollection | Latest Professional-Cloud-DevOps-Engineer Exam Cost

If you are ready for the Professional-Cloud-DevOps-Engineer exam for a long time, but lack of a set of suitable Professional-Cloud-DevOps-Engineer learning materials, I will tell you that you are so lucky to enter this page. We are such Professional-Cloud-DevOps-Engineer exam questions that you can use our products to prepare the exam and obtain your dreamed Professional-Cloud-DevOps-Engineer certificates. We all know that if you desire a better job post, you have to be equipped with appropriate professional quality and an attitude of keeping forging ahead. And we can give what you need!

Google Professional-Cloud-DevOps-Engineer Certification is a valuable credential for professionals seeking to advance their careers in DevOps engineering on the Google Cloud Platform. It is recognized by leading companies worldwide and can help professionals stand out in a competitive job market.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q144-Q149):

NEW QUESTION # 144

You are on-call for an infrastructure service that has a large number of dependent systems. You receive an alert indicating that the service is failing to serve most of its requests and all of its dependent systems with hundreds of thousands of users are affected. As part of your Site Reliability Engineering (SRE) incident management protocol, you declare yourself Incident Commander (IC) and pull in two experienced people from your team as Operations Lead (OL) and Communications Lead (CL). What should you do next?

- **A. Look for ways to mitigate user impact and deploy the mitigations to production.**
- B. Contact the affected service owners and update them on the status of the incident.
- C. Start a postmortem, add incident information, circulate the draft internally, and ask internal stakeholders for input.
- D. Establish a communication channel where incident responders and leads can communicate with each other.

Answer: A

Explanation:

<https://sre.google/sre-book/managing-incidents/>

NEW QUESTION # 145

You manage an application that is writing logs to Stackdriver Logging. You need to give some team members the ability to export logs. What should you do?

- A. Create an Organizational Policy in Cloud IAM to allow only these members to create log exports.
- B. Configure Access Context Manager to allow only these members to export logs.
- **C. Grant the team members the IAM role of logging.configWriter on Cloud IAM.**
- D. Create and grant a custom IAM role with the permissions logging.sinks.list and logging.sink.get.

Answer: C

Explanation:

Explanation

<https://cloud.google.com/logging/docs/access-control>

The logging.configWriter role grants permissions to create, update, and delete log exports. This is the correct role to give team members who need to export logs.

NEW QUESTION # 146

Your development team has created a new version of their service's API. You need to deploy the new versions of the API with the least disruption to third-party developers and end users of third-party installed applications. What should you do?

- **A. Introduce the new version of the API.
Announce deprecation of the old version of the API.
Deprecate the old version of the API.
Contact remaining users of the old API.
Provide best effort support to users of the old API.
Turn down the old version of the API.**
- B. Introduce the new version of the API.
Contact remaining users of the old API.
Announce deprecation of the old version of the API.
Deprecate the old version of the API.
Turn down the old version of the API.
Provide best effort support to users of the old API.
- C. Announce deprecation of the old version of the API.
Contact remaining users on the old API.
Introduce the new version of the API.
Deprecate the old version of the API.
Provide best effort support to users of the old API.
Turn down the old version of the API.
- D. Announce deprecation of the old version of the API.
Introduce the new version of the API.
Contact remaining users on the old API.

Deprecate the old version of the API.
Turn down the old version of the API.
Provide best effort support to users of the old API.

Answer: A

NEW QUESTION # 147

You are leading a DevOps project for your organization. The DevOps team is responsible for managing the service infrastructure and being on-call for incidents. The Software Development team is responsible for writing, submitting, and reviewing code. Neither team has any published SLOs. You want to design a new joint-ownership model for a service between the DevOps team and the Software Development team. Which responsibilities should be assigned to each team in the new joint-ownership model?

☐ A.

DevOps team responsibilities	Software Development team responsibilities
<ul style="list-style-type: none">Manage the service infrastructureBe on-call for incidentsPerform code reviews	<ul style="list-style-type: none">Submit code to be reviewed by the DevOps teamPublish the SLOs that the DevOps team must meet

☐ B.

DevOps team responsibilities	Software Development team responsibilities
<ul style="list-style-type: none">Manage the service infrastructurePerform code reviews	<ul style="list-style-type: none">Submit code to be reviewed by the DevOps teamBe on-call for incidentsPublish the SLOs that the DevOps team must meet

☒ C.

DevOps team responsibilities	Shared responsibilities	Software Development team responsibilities
<ul style="list-style-type: none">Manage the service infrastructure	<ul style="list-style-type: none">Perform code reviewsBe on-call for incidents on a rotation basisAdopt and publish SLOs for the service	<ul style="list-style-type: none">Submit code to be reviewed

☐ D.

DevOps team responsibilities	Shared responsibilities	Software Development team responsibilities
<ul style="list-style-type: none">Manage the service infrastructureBe on-call for incidents	<ul style="list-style-type: none">Adopt and publish SLOs for the service	<ul style="list-style-type: none">Submit code to be reviewedPerform code reviews

- A. Option A
- B. Option B
- C. Option C
- **D. Option D**

Answer: D

Explanation:

Explanation

The correct answer is D. Option D.

According to the DevOps best practices, a joint-ownership model for a service between the DevOps team and the Software Development team should follow these principles¹²:

The DevOps team and the Software Development team should share the responsibility and collaboration for managing the service infrastructure, performing code reviews, and adopting and sharing SLOs for the service.

The DevOps team and the Software Development team should have end-to-end ownership of the service, from design to development to deployment to operation to maintenance.

The DevOps team and the Software Development team should use common tools and processes to facilitate communication, coordination, and feedback.

The DevOps team and the Software Development team should align their goals and incentives with the business outcomes and customer satisfaction.

Option D is the only option that reflects these principles. Option D assigns both teams the responsibilities of managing the service infrastructure, performing code reviews, and adopting and sharing SLOs for the service.

Option D also implies that both teams have end-to-end ownership of the service, as they are involved in every stage of the service lifecycle. Option D also encourages both teams to use common tools and processes, such as GitLab3, to collaborate and communicate effectively. Option D also aligns both teams with the business outcomes and customer satisfaction, as they use SLOs to measure and improve the service quality.

The other options are incorrect because they do not follow the DevOps best practices. Option A is incorrect because it assigns only the DevOps team the responsibility of managing the service infrastructure, which creates a silo between the two teams and reduces their collaboration. Option A also does not assign any responsibility for adopting and sharing SLOs for the service, which means that both teams lack a common metric for measuring and improving the service quality. Option B is incorrect because it assigns only the Software Development team the responsibility of performing code reviews, which creates a gap between the two teams and reduces their feedback. Option B also does not assign any responsibility for adopting and sharing SLOs for the service, which means that both teams lack a common metric for measuring and improving the service quality. Option C is incorrect because it assigns both teams the same responsibilities as option A and option B, which combines their drawbacks.

NEW QUESTION # 148

Your application images are built using Cloud Build and pushed to Google Container Registry (GCR). You want to be able to specify a particular version of your application for deployment based on the release version tagged in source control. What should you do when you push the image?

- A. Reference the image digest in the source control tag.
- B. Use GCR digest versioning to match the image to the tag in source control.
- **C. Supply the source control tag as a parameter within the image name.**
- D. Use Cloud Build to include the release version tag in the application image.

Answer: C

Explanation:

Explanation
