At this time, you will stand out in the interview among other candidates with the CTFL-AT certification. Constant improvement is significant to your career development. Your current achievements cannot represent your future success. Never stop advancing. Come to study our CTFL-AT Learning Materials. Stick to the end, victory is at hand. Action always speaks louder than words. With the help of our CTFL-AT study questions, you can reach your dream in the least time.

The CTFL-AT certification is offered by the International Software Testing Qualifications Board (ISTQB), which is a non-profit organization that aims to standardize and improve the quality of software testing worldwide. By earning this certification, software testers can demonstrate their expertise in agile testing and increase their value in the job market.

The CTFL-AT exam is designed for software testers, test analysts, test engineers, test managers, and anyone involved in Agile testing projects. ISTQB Certified Tester - Foundation Level Extension - Agile Tester certification is suitable for those who are new to Agile testing and those who have experience in Agile projects. The CTFL-AT Certification is a valuable addition to the tester's resume as it demonstrates their knowledge and skills in Agile testing methodologies.

ISQI CTFL-AT (ISTQB Certified Tester - Foundation Level Extension - Agile Tester) certification exam is a globally recognized certification for software testing professionals who want to expand their knowledge and skills in agile testing methodologies. ISTQB Certified Tester - Foundation Level Extension - Agile Tester certification exam covers the concepts, techniques, and tools used in

agile testing, which are essential for delivering high-quality software products.

Our ISQI CTFL-AT mock test will help you understand the ISTQB Certified Tester - Foundation Level Extension - Agile Tester (CTFL-AT) exam inside out and you will get better marks overall. It is only because you have practical experience of the ISTQB Certified Tester - Foundation Level Extension - Agile Tester (CTFL-AT) exam even before the exam itself.

ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q58-Q63):

NEW QUESTION # 58

Which two of the following statements are CORRECT with regards to test automation on agile projects?

- 1) Every test developed for past iterations is kept and executed as part of a regression suite for each new release of code.
- 2) It would be very difficult to ensure high quality in an agile project without test automation.
- 3) Automated acceptance tests are run regularly as part of the continuous integration full system build.
- 4) Automated regression suites are only run for the final release of code.
- 5) In agile projects, the results from automated acceptance tests provide feedback on the overall product quality.

- A. 3, 4
- B. 1, 3
- C. 2, 5
- D. 2, 3

Answer: C

NEW QUESTION # 59

Your agile team is using the Testing Quadrants to ensure that all important test levels and test types are covered in the test plan. In relation to Quadrant 3 - business facing and product critique, what should be considered for the plan?

- A. Functional Testing
- B. Performance Testing
- C. Prototype Testing
- D. Exploratory Testing

Answer: D

NEW QUESTION # 60

Which of the following is the BEST way for a test team to keep its independence when working in an Agile development environment?

- A. Assign testers to be members of the Agile team, but ensure the testers report to a different manager than the developers.
- B. Share the Test Strategy with the Agile development team, but not the details of the Test Cases.
- C. Locate the team that develops the test automation framework in a different location to the Agile development team.
- D. Co-locate only some of the testers with the Agile development team, while the rest of the testers are in a different location.

Answer: A

Explanation:

Explanation

According to the ISTQB Tester Foundation Level Agile Tester syllabus, one of the key principles of agile testing is that testers are integrated into the agile team and work closely with developers and other stakeholders. However, this does not mean that testers lose their independence or objectivity. Testers should still be able to provide an unbiased view of the quality of the software and

challenge the assumptions and decisions made by the team. Therefore, option C is the best way for a test team to keep its independence when working in an agile development environment, as it allows testers to be part of the agile team, but also report to a different manager than the developers, who can support their professional development and ensure their independence. Option A is not a good way to keep independence, as it limits the transparency and collaboration between testers and developers, which are essential for agile testing. Option B is also not a good way to keep independence, as it creates a physical and organizational barrier between the test automation team and the agile development team, which can hinder communication and feedback. Option D is also not a good way to keep independence, as it creates an inconsistency and imbalance between the testers who are co-located with the agile development team and those who are not, which can affect the quality and efficiency of the testing process. NEW QUESTION # 61

You have been asked to execute an exploratory testing session on Park & Ride system. The test charter has been titled as "Buy a bus ticket". As a result, a number of defects were reported, the titles of which are listed below.

Which defect is out of scope for the given test charter?

- A. Payment for parking ticket is restricted to cash only (no credit card supported).
- B. Failed to buy a bus ticket after 18:00.
- C. Failed to buy a bus ticket when the network connection to the Central System is down.
- D. Price for a bus ticket was calculated incorrectly.

Answer: A

NEW QUESTION # 62

Which of the following is an Agile software development approach in which transparency of content and progress of tasks is usually obtained with the visualization of the active tasks and in which iterations are optional?

- A. Scrum
- B. Slack
- C. Continuous integration
- D. Kanban

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From CTFL-AT Syllabus v4.0, Section 1.2 Fundamentals of Agile Software Development, it states:

"Kanban is a lean approach that uses visualization (typically via a task board) to manage work in progress and improve workflow. Unlike Scrum, iterations in Kanban are optional." Thus, Option C (Kanban) is correct. It emphasizes visualization and does not require fixed-length iterations.

* Option A (Scrum) is iteration-based.

* Option B (Continuous integration) is a practice, not a development approach.

* Option D (Slack) is a communication tool, not a methodology.
