

Cost-Effective Oracle 1Z0-1151-25 Exam [2025]

DOWNLOAD the newest Prep4King 1Z0-1151-25 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1aMOrZ3Vz8Luj_E3xDJpK1kb0hmj8dlBm

Our 1Z0-1151-25 learning materials are carefully compiled by industry experts based on the examination questions and industry trends in the past few years. The knowledge points are comprehensive and focused. You don't have to worry about our learning from 1Z0-1151-25 exam question. We assure you that our 1Z0-1151-25 learning materials are easy to understand and use the fewest questions to convey the most important information. As long as you follow the steps of our 1Z0-1151-25 quiz torrent, your mastery of knowledge will be very comprehensive and you will be very familiar with the knowledge points. This will help you pass the exam more smoothly. The 1Z0-1151-25 learning materials are of high quality, mainly reflected in the adoption rate. As for our 1Z0-1151-25 Exam Question, we guaranteed a higher passing rate than that of other agency. More importantly, we will promptly update our 1Z0-1151-25 quiz torrent based on the progress of the letter and send it to you. 99% of people who use our 1Z0-1151-25 quiz torrent has passed the exam and successfully obtained their certificates, which undoubtedly show that the passing rate of our 1Z0-1151-25 exam question is 99%. So our product is a good choice for you. Choose our 1Z0-1151-25 learning materials, you will gain a lot and lay a solid foundation for success.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.
Topic 2	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 3	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.

Topic 4	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.
Topic 5	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.

2025 Realistic Oracle Reliable 1Z0-1151-25 Dumps Ebook

Customer first, service first is our principle of service. If you buy our 1Z0-1151-25 study guide, you will find our after sale service is so considerate for you. We are glad to meet your all demands and answer your all question about our 1Z0-1151-25 Training Materials. So do not hesitate and buy our 1Z0-1151-25 study guide, we believe you will find surprise from our products. you should have the right to enjoy the perfect after sale service and the high quality products!

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q40-Q45):

NEW QUESTION # 40

What steps must be completed during the onboarding process for Oracle Database@Google Cloud?

- A. Google Cloud project creation and OCI account subscription
- B. Account linking and identity federation
- **C. Purchase and configuration**
- D. My Oracle Support registration and RBAC assignment

Answer: C

Explanation:

The onboarding process for Oracle Database@Google Cloud primarily involves purchasing the service (via Google Cloud Marketplace) and configuring the resources (e.g., Exadata Infrastructure in GCP). Options B, C, and D include preparatory or optional steps, but the core onboarding focuses on purchase and initial setup, as per Oracle's documentation. This streamlined process reflects the service's integration into GCP workflows.

NEW QUESTION # 41

ABC company uses Okta as its identity provider and wants to federate with OCI to enable single sign-on (SSO) for accessing OCI resources. Users should be granted access to OCI compartments based on their Okta group memberships.

Which is the most direct and recommended approach to achieve this?

- A. Create a custom application in Okta that uses the OCI API to authenticate users and authorize access to resources.
- B. Establish a VPN connection between your on-premises network and OCI and configure Active Directory Federation Services (AD FS) to bridge Okta and OCI.
- C. Use SCIM provisioning to create and manage OCI users based on Okta user attributes and group memberships.
- **D. Configure Okta as a SAML 2.0 Identity Provider in OCI and map Okta groups to OCI groups.**

Answer: D

Explanation:

Here's why:

SAML 2.0 is the standard for web-based SSO: It's a mature and widely supported protocol for exchanging authentication and authorization data between identity providers (like Okta) and service providers (like OCI).

Direct Federation: Configuring Okta as a SAML IdP in OCI establishes a direct trust relationship, eliminating the need for intermediaries like VPNs or AD FS.

Group Mapping: OCI allows you to map Okta groups to OCI groups. This is crucial for implementing role-based access control (RBAC) and granting users access to specific OCI compartments based on their existing Okta group memberships. This simplifies user management and ensures consistent access policies.

Why the other options are less suitable:

B). Use SCIM provisioning: While SCIM (System for Cross-domain Identity Management) is useful for user lifecycle management (creating, updating, and deleting users), it's not the primary mechanism for SSO. It focuses on provisioning identities, not authenticating them for access. You would still need SAML for SSO.

C). Establish a VPN connection and use AD FS: This adds unnecessary complexity. A VPN is for network connectivity, not identity federation. Introducing AD FS adds another layer of infrastructure and management overhead when a direct SAML integration is available.

D). Create a custom application: Building a custom application is a complex and time-consuming approach. It requires significant development effort and ongoing maintenance. Using the built-in SAML integration is far more efficient and secure.

NEW QUESTION # 42

Which of the following components is NOT a core part of the Oracle Database@Google Cloud architecture within the Google Cloud environment?

- A. Google Cloud Project and VPC
- B. Google Cloud Router
- C. Google Cloud Storage Buckets directly mounted to Exadata compute nodes.
- D. Oracle Exadata Infrastructure

Answer: C

NEW QUESTION # 43

A company XYZ has been using Oracle Cloud Infrastructure to host their mission-critical applications, but they have decided to start using Azure for some of their workloads. They want to enable connectivity between their Oracle Cloud Infrastructure and Microsoft Azure to create a multicloud architecture.

- A. Use a VPN connection to connect the two clouds.
- B. None of the above.
- C. Use public Internet to connect the two clouds.
- D. Use OCI-Azure Interconnect to establish a private, high-bandwidth, low-latency connection between the two clouds.

Answer: D

Explanation:

The OCI-Azure Interconnect is the official Oracle-Microsoft partnership solution for establishing a private, high-bandwidth, and low-latency connection between OCI and Azure. This interconnect leverages Azure ExpressRoute and Oracle FastConnect to create a dedicated network link, bypassing the public internet for enhanced security and performance. A VPN connection (Option A) is possible but less optimal due to higher latency and lower reliability compared to the interconnect. Using the public internet (Option B) is insecure and unsuitable for mission-critical applications. This solution is detailed in Oracle's multicloud architecture guides and the OCI-Azure partnership documentation, emphasizing its suitability for enterprise multicloud deployments.

NEW QUESTION # 44

Which scenario is least likely to need Oracle Interconnect for Google Cloud?

- A. Deploying a multicloud disaster recovery solution
- B. Migrating data from an on-premises data center to OCI
- C. Running latency-sensitive applications across OCI and GCP
- D. Leveraging OCI's Autonomous Database with GCP's AI tools

Answer: B

Here's why:

Migrating data from an on-premises data center to OCI is a one-time data transfer operation. While network connectivity is important for this migration, it doesn't necessitate the ongoing, dedicated connection that Oracle Interconnect provides. You would typically use other methods like:

Cloud storage services: Uploading data to cloud storage (like OCI Object Storage) and then importing it into other OCI services.

The other options are more likely to require Oracle Interconnect:

Running latency-sensitive applications across OCI and GCP: Applications that require real-time communication between components running in different clouds benefit significantly from the low latency provided by Oracle Interconnect.
