NEW QUESTION # 43

Which views should software architects document? Select the three most popular views. P-Questbn. From the following 9 answers select 3 that fit best.

- A. Configuration view
- B. Link view
- C. Deployment view
- D. Non-functional view
- E. Data view
- F. Building-block view
- G. Stakeholder view
- H. Runtime view
- I. Interface view

Answer: C,F,H

NEW QUESTION # 44

Which of the following statements about (crosscutting) concepts are most appropriate? (Select four.)

- A. For each quality goal there should be an explicitly documented concept.
- B. A concept can define constraints for the implementation of many building blocks.
- C. Concepts are a means to increase consistency.
- D. A concept might be implemented by a single building block.
- E. Uniform exception handling is most easily achieved when architects agree with developers upon a suitable concept prior to implementation.
- F. The definition of appropriate concepts ensures the conceptual integrity of the architecture.
- G. Uniform usage of concepts reduces coupling between building blocks.

Answer: B,C,E,F

Explanation:

Appropriate statements about crosscutting concepts in software architecture include: A. The definition of appropriate concepts ensures the conceptual integrity of the architecture. - Consistent use of concepts across an architecture ensures that the system is cohesive and maintains integrity. B. Concepts are a means to increase consistency. - By defining and following common patterns and strategies, consistency is achieved throughout the system. D. Uniform exception handling is most easily achieved when architects agree with developers upon a suitable concept prior to implementation. - Establishing a common approach to exception handling before development starts can ensure uniformity and reduce errors. G. A concept can define constraints for the implementation of

many building blocks. - Concepts often set rules or guidelines that impact how multiple components or building blocks should be implemented, helping to maintain a unified approach to solving architectural problems.
These answers are derived from established principles and patterns in the field of software architecture, focusing on best practices and common methodologies.

NEW QUESTION # 45

For which quality characteristics is the software architect responsible?

Please name the two characteristics that best match the role of the software architect. (Choose two.)

- A. The performance of the software
- B. The suitability of the software design for its purpose
- C. The technical quality of the software implementation
- D. The software is free of errors

Answer: A,B

Explanation:

The software architect is typically responsible for the following quality characteristics: A. The performance of the software - Ensuring that the software meets performance criteria and behaves efficiently under specified conditions is a primary responsibility of the software architect. C. The suitability of the software design for its purpose - Architects must ensure that the design effectively meets the intended functions and requirements, addressing the suitability of the software for its purpose.

These answers are derived from established software architecture practices and principles, focusing on the roles and responsibilities of software architects in ensuring quality and effective documentation.
