Axis Network Video Exam

2

Axis Network Video Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47
An installation with an AXIS P1344 experiences image flickering. How can this be remedied?

- A. Changing the camera's white balance
- B. Adding IR light to the scene
- C. Adding white light to the scene
- D. Changing the camera's exposure setting

Answer: D

NEW QUESTION # 48
A customer has a lot of motion blur on recordings from a fixed camera. What would be the most likely setting to address the blurring?

- A. Brightness
- B. Shutter speed
- C. Gain level
- D. Backlight compensation

Answer: B

NEW QUESTION # 49
In a network surveillance installation, the purpose of a router is to

- A. Forward the video stream between networks.
- B. Separate the video stream from the camera control signaling.
- C. Separate audio and video traffic to reduce audio latency.
- D. Forward the video stream to the correct receiver within a network.

Answer: A

NEW QUESTION # 50
If a camera lens is broken and you need to replace it, you should always disconnect the power and network cables because there is a risk that

- A. The shutter will break.
- B. The sensor will attract dust.
- C. The lens electronics will short circuit.
- D. The camera electronics will short circuit.

Answer: B

NEW QUESTION # 51

New Axis ANVE Test Materials & ANVE Test Assessment

Dumps Free

Don't worry because "DumpStillValid" is here to save you from these losses with its updated and real Axis ANVE exam questions. We provide you with the latest prep material which is according to the content of Axis ANVE Certification Exam and enhances your knowledge to crack the test. DumpStillValid practice material is made by keeping in focus all the sections of the current syllabus.

Axis Network Video Exam Sample Questions (Q161-Q166):

NEW QUESTION # 161

In clear weather, Axis specifies, in accordance with Johnson's criteria, an AXIS Q1921 with a 60 mm lens to have detection range of 1200 m (3900 ft) for a person. Based on this estimation which of the following is true?

- A. An analysis or analytic software is able to discern a person versus a car in 1200 m distance with 50% probability
- B. An analysis or analytic software is able to detect a person in 1200 m distance with 90% probability
- C. A human observer is able to detect a person in 1200 m distance with 50% probability
- D. A human observer can discern a person versus a car in 1200 m distance with 90% probability

Answer: C

NEW QUESTION # 162

If a surveillance camera is installed in an environment with fluorescent lighting, which effect may this have on the video quality?

- A. Increased color saturation
- B. Increased random noise
- C. Flickering effects on video
- D. Motion blur on moving objects

Answer: C

Explanation:

Fluorescent lighting can cause flickering effects in video due to the way these lights operate. Fluorescent lamps typically flicker at twice the power line frequency (50 Hz or 60 Hz), which can interfere with the camera's frame rate and shutter speed, leading to visible flickering in the recorded video. This effect is more pronounced when the camera's exposure settings are not synchronized with the frequency of the lighting. Axis Network Video documentation discusses the importance of using cameras with anti-flicker settings or adjusting the shutter speed to match the lighting frequency to mitigate this issue.

NEW QUESTION # 163

Why is the background of this scene slightly out of focus?

- A. The IR LEDs are on
- B. The light level is too low
- C. The pixel density is too low
- D. The depth of field is too shallow

Answer: D

Explanation:

The background of the scene is slightly out of focus due to a shallow depth of field. Depth of field refers to the range of distance within a photo that appears acceptably sharp. A shallow depth of field results in a narrow focus area, causing objects outside this area to appear blurred. This can be influenced by the aperture setting of the lens, the focal length, and the distance to the subject. Axis documentation on camera setup and focus adjustments provides guidance on managing depth of field to ensure optimal image clarity.

NEW QUESTION # 164

To ensure optimal performance of outdoor cameras running video analytics, maintenance is

- A. irrelevant.

- B. optional.
- **C. essential.**
- D. automated.

Answer: C

Explanation:

Maintenance is essential for ensuring the optimal performance of outdoor cameras running video analytics.

Regular maintenance tasks include cleaning the camera lens, checking and updating firmware, inspecting connections, and verifying that analytics software is functioning correctly. These activities help maintain image quality and ensure the accuracy and reliability of the video analytics. Axis installation and maintenance guides recommend routine maintenance to prevent performance degradation and extend the lifespan of the equipment.

NEW QUESTION # 165

What is the main purpose of HDMI out on a camera?

- **A. For connecting to a public view monitor**
- B. For accessing camera recordings
- C. For central monitoring
- D. For connecting to an installation monitor

Answer: A

Explanation:

The main purpose of an HDMI output on a camera is for connecting to a public view monitor (PVM). This allows live video feed from the camera to be displayed directly on monitors in public areas, which can act as a deterrent against theft or unwanted behavior. Axis documentation states that HDMI outputs are used to provide real-time video display for public viewing, enhancing security presence and situational awareness.

NEW QUESTION # 166

.....

ANVE practice materials are typically seen as the tools of reviving, practicing and remembering necessary exam questions for the exam, spending much time on them you may improve the chance of winning. However, our ANVE training materials can offer better condition than traditional practice materials and can be used effectively. We treat it as our major responsibility to offer help so our ANVE Practice Guide can provide so much help, the most typical one is their efficiency.
