AZ-800 Instant Discount, Latest AZ-800 Exam Experience

With the increasing marketization, the product experience marketing has been praised by the consumer market and the industry. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the AZ-800 study materials, so we provide free pre-sale experience to help users to better understand our products. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of AZ-800 Study Materials to download.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q98-Q103):

NEW QUESTION # 98
You have an Azure virtual machine named Served that runs a network management application. Server1 has the following network configurations:
* Network interface: Nic1
* IP address. 10.1.1.1/24
* Connected to: VnetVSubnet1
You need to connect Server1 to an additional subnet named Vnet1/Subnet2.
What should you do?

- A. Add a network interface to Server1.
- B. Create a private endpoint on Subnet2
- C. Modify the IP configurations of Nic1.

- D. Add an IP configuration to Nic1.

Answer: A

NEW QUESTION # 99
Task2
You need to ensure that the Azure file share named share1 can sync to on-premises servers.
The required source files are located in a folder named \\dc1.contoso.com\install.
You do NOT need to specify the on-premises servers at this time.

Answer:

Explanation:
See the solution of this Task below
Explanation:
One possible solution to ensure that the Azure file share named share1 can sync to on-premises servers is to use Azure File Sync.
Azure File Sync allows you to centralize your file shares in Azure Files without giving up the flexibility, performance, and compatibility of an on-premises file server. It does this by transforming your Windows Servers into a quick cache of your Azure file share. You can use any protocol available on Windows Server to access your data locally (including SMB, NFS, and FTPS) and you can have as many caches as you need across the world1.
Here are the steps to configure Azure File Sync for the Azure file share named share1 and the source files located in a folder named \dc1.contoso.com\install:
On the Azure portal, create a Storage Sync Service in the same region as your storage account that contains the Azure file share named share1. For more information on how to create a Storage Sync Service, see How to deploy Azure File Sync.
On the on-premises server that hosts the folder named \dc1.contoso.com\install, install the Azure File Sync agent. For more information on how to install the Azure File Sync agent, see Install the Azure File Sync agent.
On the on-premises server, register the server with the Storage Sync Service that you created in the first step. For more information on how to register a server with a Storage Sync Service, see Register/unregister a server with Storage Sync Service.
On the Azure portal, create a sync group that defines the sync topology for a set of files. In the sync group, select the Azure file share named share1 as the cloud endpoint and the folder named \dc1.contoso.com\install as the server endpoint. For more information on how to create a sync group, see Create a sync group and a cloud endpoint and Create a server endpoint.
Wait for the initial sync to complete. You can monitor the sync progress on the Azure portal or on the on-premises server. For more information on how to monitor sync progress, see [Monitor sync progress].
Once the initial sync is complete, you can add more on-premises servers to the same sync group to sync and cache the content locally. You can also enable cloud tiering to optimize the storage space on the on-premises servers by tiering infrequently accessed or older files to Azure Files.

NEW QUESTION # 100
You deploy a new Active Directory Domain Services (AD DS) forest named contoso.com. The domain contains three domain controllers named DC1, DC2, and DC3.
You rename Default-First-Site-Name as Site1.
You plan to ship DC1, DC2, and DC3 to datacenters in different locations.
You need to configure replication between DC1, DC2, and DC3 to meet the following requirements:
Each domain controller must reside in its own Active Directory site.
The replication schedule between each site must be controlled independently.
Interruptions to replication must be minimized.
Which three actions should you perform in sequence in the Active Directory Sites and Services console? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Create a connection object between DC1 and DC2.

Create an additional site link that contains Site1 and Site2.

Create two additional sites named Site2 and Site3. Move DC2 to Site2 and DC3 to Site3.

Create a connection object between DC2 and DC3.

Remove Site2 from DEFAULTIPSITELINK.

Answer Area

Answer:

Explanation:

Actions

Create a connection object between DC1 and DC2.

Create an additional site link that contains Site1 and Site2.

Create two additional sites named Site2 and Site3. Move DC2 to Site2 and DC3 to Site3.

Create a connection object between DC2 and DC3.

Remove Site2 from DEFAULTIPSITELINK.

Answer Area

Create two additional sites named Site2 and Site3. Move DC2 to Site2 and DC3 to Site3.
Create a connection object between DC1 and DC2.

Create a connection object between DC2 and DC3.

Explanation
Graphical user interface, text, application Description automatically generated

Create two additional sites named Site2 and Site3. Move DC2 to Site2 and DC3 to Site3.

Create a connection object between DC1 and DC2.

Create a connection object between DC2 and DC3.

NEW QUESTION # 101
What should you implement for the deployment of DC3?

- A. an Azure AD administrative unit
- B. Azure AD Application Proxy
- C. an Azure virtual machine
- D. Azure Active Directory Domain Services (Azure AD DS}

Answer: D

NEW QUESTION # 102

You have an Active Directory Domain Services (AD DS) domain that contains a group named Group1.

You need to create a group managed service account (gMSA) named Account1. The solution must ensure that Group1 can use Account1.

How should you complete the script? To answer, select the appropriate options in the answer area, NOTE: Each correct selection is worth one point.

Answer:

Explanation:
