Free PDF Quiz Valid Salesforce - CRT-450 Discount Code

In the PDF version, the Salesforce Certified Platform Developer I (CRT-450) exam questions are printable and portable. You can take these Salesforce CRT-450 pdf dumps anywhere and even take a printout of Salesforce Certified Platform Developer I (CRT-450) exam questions. The PDF version is mainly composed of real Salesforce CRT-450 Exam Dumps. Actual4Dumps updates regularly to improve its Salesforce Certified Platform Developer I (CRT-450) pdf questions and also makes changes when required.

Salesforce Certified Platform Developer I Sample Questions (Q89-Q94):

NEW QUESTION # 89

A developer needs to have records with specific field values in order to test a new Apex class.

What should the developer do to ensure the data is available to the test?

- A. Use SOQL to query the org for the required data.
- B. Use Anonymous Apex to create the required data.
- C. Use test.loadData() and reference a JSON file in Documents.
- **D. Use Test.loadData() and reference a CSV file in a static resource.**

Answer: D

Explanation:

To ensure that specific data is available in test methods, the developer should create test data within the test context.

Option B: Use Test.loadData() and reference a CSV file in a static resource.

Correct Approach.

Test.loadData() is a method that allows test methods to load test data from a CSV file stored as a static resource.

This method creates the records in the test context, ensuring that the data is available during the test execution.

Using a CSV file makes it easy to define multiple records with specific field values.

Usage Example:

```

@isTest
private class MyTestClass {
    @isTest
    static void testMethod() {
        List<MyObject__c> testRecords = (List<MyObject__c>) Test.loadData(MyObject__c.sObjectType, 'MyTestData');
        // Proceed with testing using testRecords
    }
}

```

Where 'MyTestData' is the name of the static resource containing the CSV file.

Test.loadData() does not support loading data from JSON files or from the Documents object.

It uses CSV files stored as static resources.

Option C: Use Anonymous Apex to create the required data.

Not Effective for Testing.

Data created via Anonymous Apex is not available in test methods due to data isolation.

Test methods operate in their own context and cannot access data created outside the test unless SeeAllData=true is used, which is discouraged.

Option D: Use SOQL to query the org for the required data.

Not Recommended.

Test methods should not rely on existing org data.

Tests should create their own data to ensure consistency and avoid dependencies.

Using SeeAllData=true is discouraged.

Conclusion:

To ensure that records with specific field values are available in the test, the developer should use Test.loadData() with a CSV file stored in a static resource.

Therefore, Option B is the correct answer.

Reference:

Test.loadData() Method

Static Resources

Options Not Suitable:

Option A: Use test.loadData() and reference a JSON file in Documents.

Incorrect.

NEW QUESTION # 90

A Developer Edition org has five existing accounts. A developer wants to add 10 more accounts for testing purposes.

The following code is executed in the Developer Console using the Execute Anonymous window:

```

Account myAccount = new Account (Name = 'MyAccount' );
insert myAccount;

Integer x = 1;
List<Account> newAccounts = new List<Account> ();
do {
    Account acct = new Account (Name = 'New Account ' + x++);
    newAccounts.add(acct);
} while (x < 10);

```

salesforce

How many total accounts will be in the org after this code is executed?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The code snippet in question creates and inserts an account named MyAccount and then initializes a loop to add additional accounts.

The loop runs from x = 1 and continues adding accounts until x < 10.

Since the condition x++ is post-increment, the loop runs exactly 10 times, creating and adding 10 new accounts to the newAccounts list.

At the end, the insert DML statement persists these 10 new accounts, along with the already existing account (MyAccount).
Total accounts in the org:
Existing accounts = 5
New accounts added = 10
Total = 15

NEW QUESTION # 91

Which two are phases in the Aura application event propagation framework?
Choose 2 answers

- A. Buddle
- B. Control
- C. Emit
- D. default

Answer: A,D

NEW QUESTION # 92

A developer in a Salesforce org with 100 Accounts executes the following code using the Developer console: `Account myAccount = new Account(Name = 'MyAccount'); Insert myAccount; For (Integer x = 0; x < 150; x++) {Account newAccount = new Account (Name='MyAccount' + x); try {Insert newAccount;} catch (Exception ex) {System.debug (ex);}}` insert new Account (Name='myAccount'); How many accounts are in the org after this code is run?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

NEW QUESTION # 93

Universal Containers decides to use exclusively declarative development to build out a new Salesforce application. Which three options should be used to build out the database layer for the application?
Choose 3 answers

- A. Flows
- B. Relationships
- C. Roll-up summaries
- D. Custom objects and fields
- E. Triggers

Answer: B,C,D

Explanation:

When building the database layer of a Salesforce application using exclusively declarative development, the following options are relevant:

Option A: Roll-up summaries

Valid Declarative Tool.

Roll-up summary fields allow calculations (SUM, COUNT, MIN, MAX) on child records in a master-detail relationship.

They are created declaratively.

Custom objects and fields form the core of the database schema.

They are created using the Setup menu without code.

Relationships (lookup, master-detail, and many-to-many via junction objects) are established declaratively.

They define how objects relate to each other.

Flows are used for process automation and logic.

They are part of the application logic layer, not the database layer.

Option E: Triggers

Requires Code (Not Declarative).

Triggers are written in Apex code.

They are not part of declarative development.

Conclusion:

To build the database layer declaratively, the developer should use Roll-up summaries (A), Custom objects and fields (C), and Relationships (D).

Reference:

Roll-Up Summary Fields

Option C: Custom objects and fields

Valid Declarative Tool.

Creating Custom Objects and Fields

Option D: Relationships

Valid Declarative Tool.

Object Relationships Overview

Incorrect Options:

Option B: Flows

Not Part of the Database Layer.

NEW QUESTION # 94

.....

This is a gainful opportunity to choose CRT-450 actual exam from our company. They are saleable offerings from our responsible company who dedicated in this line over ten years which helps customers with desirable outcomes with the help of our CRT-450 Study Guide. Up to now, there are three versions of CRT-450 exam materials for your reference. They are PDF, software and app versions. And we have free demos for you to download before you decide to purchase.
