Answer: A

NEW QUESTION # 265
Members of the sales team are using email to send sensitive client lists with contact information to their personal accounts The company's AUP and code of conduct prohibits this practice. Which of the following configuration changes would improve security and help prevent this from occurring?

- A. Put employees' personal email accounts on the mail server on a blocklist.
- B. Configure the DLP transport rules to provide deep content analysis.
- C. Set up IPS to scan for outbound emails containing names and contact information.
- D. Use Group Policy to prevent users from copying and pasting information into emails.
- E. Move outbound emails containing names and contact information to a sandbox for further examination.

Answer: B

Explanation:
Data loss prevention (DLP) is a set of policies and tools that aim to prevent unauthorized disclosure of sensitive data. DLP transport rules are rules that apply to email messages that are sent or received by an organization's mail server. These rules can provide deep content analysis, which means they can scan the content of email messages and attachments for sensitive data patterns, such as client lists or contact information. If a rule detects a violation of the DLP policy, it can take actions such as blocking, quarantining, or notifying the sender or recipient. This would improve security and help prevent sales team members from sending sensitive client lists to their personal accounts.
