## APICS Certified Supply Chain Professional Sample Questions (Q245-Q250):

### NEW QUESTION # 245

The use of theory of constraints (TOC) differs from traditional decision making because it:

- A. recognizes that the individual resources that limit business performance are difficult to find and manage
- B. provides a way to analyze the operating cost of a resource that is easier to use than traditional accounting methods
- C. examines the resource's utilization rather than the cost of a product

- D. places greater emphasis on timing than cost in adjusting resources that are limiting business performance

**Answer: D**

Explanation:

The Theory of Constraints (TOC) differs from traditional decision-making approaches by focusing more on timing rather than just cost when adjusting resources that limit business performance. Key points include:

- \* Identification of Bottlenecks: TOC identifies and addresses the most critical bottlenecks that constrain the system's overall throughput.
- \* Focus on Throughput: Emphasizing increasing throughput rather than just cost reduction ensures that the entire system's performance improves.
- \* Timing and Synchronization: TOC places significant emphasis on the timing and synchronization of processes to ensure that bottlenecks are effectively managed and do not impede overall production flow.
- \* Continuous Improvement: By continually identifying and addressing constraints, TOC fosters a culture of continuous improvement and operational efficiency.

#### NEW QUESTION # 246

Which of the following types of alignments between extended supply chain partners will yield the highest level of competitive advantage?

- A. Strategic
- B. Social
- C. Process
- D. Financial

**Answer: A**

Explanation:

\* Types of Alignments: Alignments between extended supply chain partners can be categorized into financial, social, process, and strategic alignments.

\* Financial Alignment (Option A): This involves financial transactions and agreements, which are fundamental but do not necessarily drive competitive advantage on their own.

\* Social Alignment (Option B): This pertains to relationships and cultural compatibility, which can enhance cooperation but are not the primary source of competitive advantage.

\* Process Alignment (Option C): This involves harmonizing processes and operations, which improves efficiency but still may not yield the highest level of competitive advantage.

\* Strategic Alignment (Option D): This refers to aligning long-term goals, objectives, and strategies across the supply chain partners. When partners are strategically aligned, they work towards common goals, share risks and rewards, and are more likely to innovate together. This deep level of collaboration can lead to a significant competitive advantage. References: Strategic Supply Chain Management literature, Collaborative Planning and Execution guides.

#### NEW QUESTION # 247

Which of the following types of data most likely will be communicated between two parties who have formed a strategic alliance?

- A. Bill of material (BOM)
- B. Proprietary
- C. Product specifications
- D. Stochastic

**Answer: B**

Explanation:

\* Strategic Alliance Definition: A strategic alliance is a formal agreement between two companies to work together towards common objectives while remaining independent.

\* Data Sharing in Alliances: In a strategic alliance, the data shared between parties is critical to achieving mutual goals and

maintaining competitive advantage.

\* Types of Data:

\* Stochastic Data: Data that incorporates randomness and uncertainty, typically not the primary focus in a strategic alliance.

\* Proprietary Data: Confidential and exclusive information that gives a competitive edge, crucial for strategic alliances to develop joint strategies.

\* Bill of Material (BOM): A comprehensive list of parts, items, assemblies, and other materials required to create a product, which might be shared but is not as crucial as proprietary data.

\* Product Specifications: Detailed descriptions of a product's design and features, important but generally included under the broader scope of proprietary data.

\* Conclusion: Proprietary data, including sensitive business information, is most likely communicated between parties in a strategic alliance to ensure coordinated efforts and mutual benefits.

### NEW QUESTION # 248

Which of the following advantages of radio frequency identification (RFID) is the main benefit for material handling?

- A. Detection of multiple tags
- B. Long distance readability
- **C. Improved speed and flexibility**
- D. Ability to withstand harsh environments

**Answer: C**

Explanation:

\* RFID in Material Handling: Radio Frequency Identification (RFID) uses electromagnetic fields to automatically identify and track tags attached to objects.

\* Main Benefits:

\* Improved Speed and Flexibility: RFID allows for quick scanning and identification of multiple items without line-of-sight, enhancing operational efficiency.

\* Long Distance Readability: Beneficial but secondary to speed and flexibility in material handling.

\* Ability to Withstand Harsh Environments: Important for durability but not the primary benefit.

\* Detection of Multiple Tags: Contributes to speed and efficiency but is part of the broader advantage of improved speed and flexibility.

\* Conclusion: The main benefit of RFID for material handling is the improved speed and flexibility it offers, allowing for efficient and agile operations.

### NEW QUESTION # 249

A company has decided to source, manufacture, and distribute its products from its own facilities located throughout the world. This strategy is best described as:

- A. a universal distribution system
- B. horizontal integration.
- **C. vertical integration.**
- D. an outsourced supply chain.

**Answer: C**

Explanation:

\* Definition: Vertical integration occurs when a company controls multiple stages of its supply chain, from raw materials to the final product distribution.

\* Horizontal Integration (Option A): This refers to the acquisition of competitors or expansion within the same stage of the supply chain, not across multiple stages.

\* Universal Distribution System (Option B): This is not a standard term in supply chain management and does not accurately describe the scenario.

\* Vertical Integration (Option C): The company is sourcing, manufacturing, and distributing products from its own facilities globally, indicating control over multiple stages of the supply chain, characteristic of vertical integration.

\* Outsourced Supply Chain (Option D): This would imply reliance on external partners for various supply chain functions, which is not the case here. References: Supply Chain Management literature, Vertical Integration studies.
