The services provided by our CT-PT test questions are quite specific and comprehensive. First of all, our test material comes from many experts. The gold content of the materials is very high, and the updating speed is fast. By our CT-PT exam prep, you can find the most suitable information according to your own learning needs at any time, and make adjustments and perfect them at any time. Our CT-PT Learning Materials not only provide you with information, and our CT-PT learning guide is tailor-made for you, according to the timetable to study and review.

We have applied the latest technologies to the design of our CT-PT exam prep not only on the content but also on the displays. As a consequence you are able to keep pace with the changeable world and remain your advantages with our CT-PT training braindumps. Besides, you can consolidate important knowledge for you personally and design customized study schedule or to-do list on a daily basis. As long as you follow with our CT-PT Study Guide, you are doomed to achieve your success.

Latest CT-PT Exam Book - CT-PT Cert

For a long time, high quality is our CT-PT exam questions constantly attract students to participate in the use of important factors, only the guarantee of high quality, to provide students with a better teaching method, and at the same time the CT-PT practice quiz brings more outstanding teaching effect. Our high-quality CT-PT learning guide help the students know how to choose suitable for their own learning method, our CT-PT study materials are a very good option.

ISTQB CT-PT Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• The Concept of Load Generation: This section of the exam measures the skills of Software Test Analysts and discusses how representative loads are modeled and produced to simulate user or process behavior. It explores methods such as user interface inputs, crowdsourcing, API-based calls, or protocol capture and playback, emphasizing the need for repeatable loads that accurately reflect real-world conditions.
Topic 2	<ul style="list-style-type: none">• Common Failures in Performance Testing and Their Causes: This section of the exam measures the skills of Performance Engineers and outlines frequent failure modes, including slow responses at various load levels, degraded performance over time, and system crashes under peak conditions. It provides examples of underlying causes such as resource leaks, insufficient capacity, and poor handling of spikes or concurrency, illustrating why robust planning and monitoring are crucial for reliable performance.
Topic 3	<ul style="list-style-type: none">• Testing Types in Performance Testing: This section of the exam introduces the distinction between static and dynamic performance testing. It shows how reviews of requirements, architecture, and code can identify risks before coding is complete, and how runtime checks of resource utilization and response times reveal issues that only appear when the system is in operation.
Topic 4	<ul style="list-style-type: none">• Types of Performance Testing: This section of the exam measures the skills of Software Test Analysts and covers various approaches such as load, stress, scalability, spike, endurance, concurrency, and capacity testing. It explains how each type evaluates system behavior under different conditions, helping testers and stakeholders understand how the system handles both expected and extreme usage scenarios.

ISTQB Certified Tester - Performance Testing Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which of the following is a best practice to include in performance test scripts when verifying results?

- A. Verify that correct information was added to the database.
- B. Increase the number of scripts executed to provide greater coverage.
- C. Add transaction timers to collect response times.
- D. Hold the development team accountable for system performance.

Answer: A

NEW QUESTION # 39

What should be captured for batch processing performance metrics?

- A. Throughput and wait times
- B. Average percentage of network latency
- C. Number of concurrent virtual users
- D. Number of records deleted

Answer: A

Explanation:

For batch processing performance metrics, the two most important factors are:

Throughput - Measures the number of transactions processed over time.

Wait times - Evaluates delays in processing batches.

Option B (Number of records deleted) is irrelevant unless batch processing specifically involves deletions.

Option C (Network latency percentage) applies to real-time transaction processing, not batch jobs.

Option D (Concurrent virtual users) applies more to load testing rather than batch performance.

NEW QUESTION # 40

Which of the following is usually identified by a performance test?

- A. Learnability concerns
- **B. Resource bottlenecks**
- C. Failure to meet accessibility requirements
- D. Suitability issues

Answer: B

Explanation:

Performance tests primarily identify resource bottlenecks such as CPU saturation, memory leaks, network congestion, and database slowdowns.

Option B (Suitability issues) is a functional requirement concern, not a performance issue.

Option C (Learnability concerns) relates to usability testing, not performance.

Option D (Accessibility requirements) falls under compliance and usability testing, not performance testing.

NEW QUESTION # 41

Which of the following is considered a common web service protocol?

- A. HTTP
- B. RTE
- C. SOAK
- **D. REST**

Answer: D

Explanation:

REST (Representational State Transfer) is a widely used web service protocol that enables client-server communication over HTTP. It is commonly used in modern APIs and web applications for performance testing.

Option A (SOAK) refers to soak testing, which evaluates performance over an extended period.

Option C (HTTP) is a transport protocol, but REST is the actual web service architecture built on HTTP.

Option D (RTE) is not a web service protocol but may refer to Real-Time Enterprise systems.

NEW QUESTION # 42

Which of the following is typically the result of oversaturation of system resources during performance testing?

- A. The size of the database will gradually decrease.
- **B. Response time will be slow under significant load levels.**
- C. Error logging will decrease.
- D. Response time will gradually improve over a period of time.

Answer: B

Explanation:

When system resources (e.g., CPU, RAM, I/O) are oversaturated, the system becomes overloaded, leading to increased response times and poor application performance.

Option A (Gradual improvement of response time) is incorrect because performance degrades under heavy load.

Option C (Error logging decreases) is unlikely; in most cases, errors increase when systems reach their limits.

Option D (Database size decreases) is unrelated to performance saturation.

NEW QUESTION # 43

.....

Our CT-PT exam questions can assure you that you will pass the CT-PT exam as well as getting the related certification under the guidance of our CT-PT study materials as easy as pie. Firstly, the pass rate among our customers has reached as high as 98% to 100%, which marks the highest pass rate in the field. Secondly, you can get our CT-PT Practice Test only in 5 to 10 minutes after payment, which enables you to devote yourself to study as soon as possible.
