It-Pruefung hat vielen IT-Zertifizierungskandidaten geholfen. Und It-Pruefung bekommt gute Bewertung von den Kandidaten. Die Erfolgsquote von It-Pruefung Prüfungsfragen erreicht 100%, was auch die Tatsache von vielen Kadidaten geprüft werden. Wenn Sie sich sehr müde für die Vorbereitung der ISTQB CT-PT Zertifizierungsprüfung fühlen, können Sie die CT-PT Prüfungsunterlagen nicht ignorieren. Das ist ein Werkzeug für die hocheffektive Vorbereitung der ISTQB CT-PT Prüfung. Es kann Ihre Effektivität am größten Teil erhöhen.

ISTQB CT-PT Prüfungsplan:

Thema	Einzelheiten
Thema 1	• The Concept of Load Generation: This section of the exam measures the skills of Software Test Analysts and discusses how representative loads are modeled and produced to simulate user or process behavior. It explores methods such as user interface inputs, crowdsourcing, API-based calls, or protocol capture and playback, emphasizing the need for repeatable loads that accurately reflect real-world conditions.
Thema 2	• Types of Performance Testing: This section of the exam measures the skills of Software Test Analysts and covers various approaches such as load, stress, scalability, spike, endurance, concurrency, and capacity testing. It explains how each type evaluates system behavior under different conditions, helping testers and stakeholders understand how the system handles both expected and extreme usage scenarios.
Thema 3	• Testing Types in Performance Testing: This section of the exam introduces the distinction between static and dynamic performance testing. It shows how reviews of requirements, architecture, and code can identify risks before coding is complete, and how runtime checks of resource utilization and response times reveal issues that only appear when the system is in operation.
Thema 4	• Common Failures in Performance Testing and Their Causes: This section of the exam measures the skills of Performance Engineers and outlines frequent failure modes, including slow responses at various load levels, degraded performance over time, and system crashes under peak conditions. It provides examples of underlying causes such as resource leaks, insufficient capacity, and poor handling of spikes or concurrency, illustrating why robust planning and monitoring are crucial for reliable performance.

CT-PT Prüfungsfragen, CT-PT Fragen und Antworten, ISTQB Certified Tester - Performance Testing

It-Pruefung ist nicht nur zuverlässig, sondern bietet auch erstklassigen Service. Wenn Sie die Prüfung nach dem Kauf der CT-PT - Produkte nicht bestehen, versprechen wir Ihnen 100% eine volle Rückerstattung. It-Pruefung steht Ihnen auch einen einjährigen kostenlosen Update-Service zur Verfügung.

ISTQB Certified Tester - Performance Testing CT-PT Prüfungsfragen mit Lösungen (Q36-Q41):

36. Frage

Which of the following is a static performance test?

- A. Evaluation of the test execution skills of the testers
- **B. Review of the network architecture**
- C. Formal signature approval by the end users
- D. Usability test of the user interface

Antwort: B

Begründung:

A static performance test is a non-execution-based review that analyzes system architecture, network configurations, and other elements that affect system performance before execution.

Option A (Usability test) is not a static performance test but rather a functional or UX evaluation.

Option B (Evaluation of testers' skills) is unrelated to performance testing.

Option D (Formal signature approval) is an administrative task and not a static test.

37. Frage

You are managing the testing efforts of an existing distributed system that manages inventories of automobile and light truck tires from multiple warehouses across the country. The system is being enhanced to track incoming restocking shipments at the point of entry to the warehouse and outbound sales shipments at the point of shipment from the warehouse, all of which are executed in real-time. System loads traditionally peak on Mondays due to built-up demand from the previous weekend.

You are preparing a presentation to the business stakeholders, outlining your performance testing strategy.

Which of the following is appropriate to present to this audience?

- **A. The risks that may exist due to platform differences between the test environment and the production environment**
- B. A comprehensive list of support staff to be available during performance testing, including key members of the application development team
- C. A test plan that includes specific technical specifications for the computing hardware to be used for performance testing
- D. Established HTTP response per second goals that will have acceptable minimum, maximum, and average response times

Antwort: A

Begründung:

Business stakeholders are most concerned with risks that affect deployment and production stability. The primary risk in performance testing is that the test environment may differ from production, leading to misleading test results.

Option A (HTTP response goals) is too technical for a business stakeholder audience.

Option B (Hardware specifications) is relevant for technical teams, not business stakeholders.

Option C (Support staff details) is a logistical aspect, not a key performance testing risk for business decision-makers.

38. Frage

Which of the following is usually identified by a performance test?

- A. Suitability issues
- B. Failure to meet accessibility requirements
- **C. Resource bottlenecks**
- D. Learnability concerns

Antwort: C

Begründung:

Performance tests primarily identify resource bottlenecks such as CPU saturation, memory leaks, network congestion, and database slowdowns.

Option B (Suitability issues) is a functional requirement concern, not a performance issue.

Option C (Learnability concerns) relates to usability testing, not performance.

Option D (Accessibility requirements) falls under compliance and usability testing, not performance testing.

39. Frage

Which of the following is a major contributor to unreliable performance projections?

- A. Disagreement between the technical and business stakeholders during analysis
- **B. Differences in the hardware between the test and production environments**
- C. Business stakeholders setting unrealistic performance goals
- D. Redundancy between the test and production environments

Antwort: B

Begründung:

One of the biggest contributors to unreliable performance projections is differences between the test and production environments. If test environments do not match CPU, memory, network configurations, and database setups in production, the results may not be representative of real-world performance.

Option A (Redundancy between test and production environments) is not a problem; it's actually beneficial for reliability.

Option B (Disagreement between stakeholders) can affect planning but does not cause unreliable projections.

Option D (Unrealistic stakeholder goals) affects expectations but not the accuracy of projections.

40. Frage

Which type of performance test measures the system's ability to handle increasing levels of load?

- A. Endurance testing
- B. Spike testing
- C. Elevation testing
- **D. Load testing**

Antwort: D

Begründung:

Load testing assesses a system's ability to handle gradually increasing levels of load and ensures that it meets performance expectations under normal and peak conditions.

Option B (Elevation testing) is incorrect because this term does not exist in ISTQB performance testing terminology.

Option C (Spike testing) focuses on sudden increases in load rather than gradual scaling.

Option D (Endurance testing) examines how a system performs over an extended period, rather than gradual load increases.

41. Frage

.....

Das erfahrungsreiche Expertenteam von It-Pruefung hat den effizienten Prüfungsfragen und Antworten zur ISTQB CT-PT Zertifizierungsprüfung entwickelt, die geeignet für die Kandidaten ist. Die Produkte von It-Pruefung sind von guter Qualität. Sie können sie als Simulationsprüfung vor der ISTQB CT-PT Zertifizierungsprüfung benutzen und sich gut auf die Prüfung vorbereiten.
