About ISTQB CT-PT Exam, each candidate is very confused. Everyone has their own different ideas. But the same idea is that this is a very difficult exam. We are all aware of ISTQB CT-PT exam is a difficult exam. But as long as we believe Prep4King, this will not be a problem. Prep4King's ISTQB CT-PT exam training materials is an essential product for each candidate. It is tailor-made for the candidates who will participate in the exam. You will absolutely pass the exam. If you do not believe, then take a look into the website of Prep4King. You will be surprised, because its daily purchase rate is the highest. Do not miss it, and add to your shoppingcart quickly.

ISTQB CT-PT Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none">Common Failures in Performance Testing and Their Causes: This section of the exam measures the skills of Performance Engineers and outlines frequent failure modes, including slow responses at various load levels, degraded performance over time, and system crashes under peak conditions. It provides examples of underlying causes such as resource leaks, insufficient capacity, and poor handling of spikes or concurrency, illustrating why robust planning and monitoring are crucial for reliable performance. |

| | |
|---------|--|
| Topic 2 | <ul style="list-style-type: none"> Testing Types in Performance Testing: This section of the exam introduces the distinction between static and dynamic performance testing. It shows how reviews of requirements, architecture, and code can identify risks before coding is complete, and how runtime checks of resource utilization and response times reveal issues that only appear when the system is in operation. |
| Topic 3 | <ul style="list-style-type: none"> Types of Performance Testing: This section of the exam measures the skills of Software Test Analysts and covers various approaches such as load, stress, scalability, spike, endurance, concurrency, and capacity testing. It explains how each type evaluates system behavior under different conditions, helping testers and stakeholders understand how the system handles both expected and extreme usage scenarios. |
| Topic 4 | <ul style="list-style-type: none"> The Concept of Load Generation: This section of the exam measures the skills of Software Test Analysts and discusses how representative loads are modeled and produced to simulate user or process behavior. It explores methods such as user interface inputs, crowdsourcing, API-based calls, or protocol capture and playback, emphasizing the need for repeatable loads that accurately reflect real-world conditions. |

Reliable CT-PT Exam Review - CT-PT Reliable Exam Review

Our products are officially certified, and CT-PT exam materials are definitely the most authoritative product in the industry. In order to ensure the authority of our CT-PT practice prep, our company has really taken many measures. First of all, we have a professional team of experts, each of whom has extensive experience. Secondly, before we write CT-PT Guide quiz, we collect a large amount of information and we will never miss any information points.

ISTQB Certified Tester - Performance Testing Sample Questions (Q37-Q42):

NEW QUESTION # 37

Which of the following is considered a characteristic of stress testing?

- A. It determines the maximum number of transactions a system can handle.
- B. It focuses on the system's ability to handle transactions over a specific timeframe.
- C. It evaluates the system's ability to handle loads beyond its design limits.**
- D. Considers the system's ability to recover from a sudden increase of loads within the system's limits.

Answer: C

Explanation:

Stress testing is designed to evaluate how a system behaves under extreme conditions, often exceeding its design limitations. The goal is to identify bottlenecks, memory leaks, and failures that occur beyond normal operating conditions.

Option A is incorrect because it refers to resilience testing, which focuses on recovery rather than stress beyond limits.

Option B is incorrect as it describes load testing, which measures performance under expected loads.

Option C is incorrect since determining the maximum transactions is a feature of capacity testing, not stress testing.

NEW QUESTION # 38

Which of the following is an advantage of using performance monitoring tools?

- A. They proactively compile metrics from server logs.**
- B. They more easily identify and report multi-threading problems.
- C. They can prevent malicious behavior.
- D. They can proactively detect denial-of-service (DoS) attacks.

Answer: A

Explanation:

Performance monitoring tools collect real-time and historical performance data, particularly from server logs, application metrics, and infrastructure monitoring. This allows testers to analyze performance trends efficiently.

Option A is incorrect because monitoring tools do not prevent malicious behavior but may detect it.

Option C is incorrect since identifying multi-threading issues is typically done through profiling tools rather than performance monitors.

Option D is incorrect as DoS attack detection falls under security testing.

NEW QUESTION # 39

What is typically the result of oversaturation of system resources during performance testing?

- A. Error logging will decrease.
- B. The size of the database will gradually decrease.
- **C. Response time will be slow under significant load levels.**
- D. Response time will gradually improve over a period of time.

Answer: C

Explanation:

When system resources are oversaturated (e.g., CPU, RAM, or network bandwidth), response times will degrade because the system struggles to process requests efficiently. This is a key performance bottleneck indicator.

Option A is incorrect because response times do not improve under heavy load; they typically worsen.

Option C is incorrect because error logging may actually increase rather than decrease under stress.

Option D is incorrect because database size is independent of system saturation unless records are actively purged.

NEW QUESTION # 40

Which of the following is a best practice to include in performance test scripts when verifying results?

- A. Hold the development team accountable for system performance.
- B. Add transaction timers to collect response times.
- **C. Verify that correct information was added to the database.**
- D. Increase the number of scripts executed to provide greater coverage.

Answer: C

Explanation:

One of the best practices in performance test scripting is to validate that correct data is recorded in the database after execution. This ensures that performance issues do not impact data integrity.

Option A (Increasing the number of scripts) may provide more coverage but does not verify accuracy.

Option C (Adding transaction timers) is useful for performance monitoring but does not ensure correct data entry.

Option D (Holding the development team accountable) is a management responsibility, not a scripting best practice.

NEW QUESTION # 41

Which of the following is a static performance test?

- A. Usability test of the user interface
- B. Evaluation of the test execution skills of the testers
- C. Formal signature approval by the end users
- **D. Review of the network architecture**

Answer: D

Explanation:

A static performance test is a non-execution-based review that analyzes system architecture, network configurations, and other elements that affect system performance before execution.

Option A (Usability test) is not a static performance test but rather a functional or UX evaluation.

Option B (Evaluation of testers' skills) is unrelated to performance testing.

Option D (Formal signature approval) is an administrative task and not a static test.

NEW QUESTION # 42

.....

It is our biggest goal to try to get every candidate through the exam. Although the passing rate of our CT-PT simulating exam is nearly 100%, we can refund money in full if you are still worried that you may not pass the CT-PT exam. You don't need to worry about the complexity of the refund process at all, we've made it quite simple. And if you really want to pass the exam instead of refund, you can wait for our updates for we will update our CT-PT Study Guide for sure to make you pass the exam.
