ITdumpsfree ServiceNow CTA Real Questions Come In Three Different Formats

IT certification exam cost is really large cost for most candidates in the whole world. Passing exam at first attempt will be everyone's goal. Now our ServiceNow CTA valid exam cram review can help you achieve your goal. Recent years we are engaging in

providing 100% pass-rate CTA Valid Exam Cram review for buyers from all over the world, and help thousands of candidates go through exam every year. If you have doubt in your test, let us help you pass exam for sure.

ServiceNow Certified Technical Architect (CTA) Sample Questions (Q37-Q42):

NEW QUESTION # 37

What is the primary factor in determining the number of MID Servers required for a standard ServiceNow deployment?

- A. The number of concurrent users on the instance
- **B. The number of targets and interaction frequency**
- C. The geographical spread of the organization
- D. The number of network routers in use

Answer: B

Explanation:

The primary factor in determining the number of MID Servers needed is the number of targets and interaction frequency.

Targets: The number of devices, applications, or external systems that ServiceNow needs to interact with (e.g., for discovery, orchestration, integrations).

Interaction Frequency: How often ServiceNow needs to communicate with these targets (e.g., continuous monitoring, scheduled data imports).

Why not the other options?

A: The number of network routers in use: While network infrastructure is important, it's not the primary factor for MID Server sizing.

C: The number of concurrent users on the instance: User activity impacts application server load, not directly the number of MID Servers needed.

D: The geographical spread of the organization: Geographic spread can influence MID Server placement, but the primary factor is the number of targets and interaction frequency.

NEW QUESTION # 38

Which encryption solution would ensure that customer credit card numbers were encrypted before being stored in the cloud and would allow for easy administration of encryption keys?

- A. Edge Encryption
- B. Database Encryption
- **C. Client-side Encryption**
- D. Server-side Encryption

Answer: C

Explanation:

Client-side Encryption is the best solution to encrypt customer credit card numbers before they are stored in the cloud and provide easy key management. Here's why:

Encryption Before Storage: Data is encrypted on the client-side (e.g., user's browser or device) before being sent to the cloud, ensuring that even if the cloud storage is compromised, the sensitive data remains protected.

Key Management: The encryption keys are managed by the client or a trusted key management system, providing greater control and flexibility.

Reduced Risk: Client-side encryption minimizes the risk of sensitive data being exposed in the cloud environment.

Why not the other options?

A: Edge Encryption: This is a broader term that can refer to various encryption techniques applied at the edge of the network.

B: Server-side Encryption: Data is encrypted on the server-side, which means the cloud provider has access to the encryption keys.

D: Database Encryption: This encrypts the entire database, but it doesn't provide the same level of control and key management as client-side encryption.

NEW QUESTION # 39

Under technical governance policies, what does environmental management in ServiceNow primarily define?

- A. Application customization

- B. Data ownership
- C. User access policies
- **D. Instance structure**

Answer: D

Explanation:

In the context of ServiceNow technical governance, environmental management primarily focuses on defining the instance structure. This includes:

Instance Segmentation: Determining how many instances are needed (e.g., separate instances for development, test, and production) and how they relate to each other.

Instance Upgrades: Establishing policies and procedures for managing instance upgrades, including scheduling, testing, and communication.

Instance Maintenance: Defining guidelines for ongoing maintenance activities, such as patching, backups, and performance monitoring.

Why not the other options?

B: Data ownership: Data ownership is typically addressed within data governance policies, not specifically environmental management.

C: User access policies: User access policies are part of security governance and are handled through roles, permissions, and access control lists.

D: Application customization: Application customization is governed by development and configuration standards, not directly by environmental management.

NEW QUESTION # 40

Which encryption solution would ensure that customer credit card numbers were encrypted before being stored in the cloud and would allow for easy administration of encryption keys?

- A. Edge Encryption
- B. Database Encryption
- **C. Client-side Encryption**
- D. Server-side Encryption

Answer: C

NEW QUESTION # 41

What components constitute the application layer security within ServiceNow?

Choose 3 answers

- **A. Multi-Factor Authentication (MFA)**
- **B. Access Control Lists (ACLs)**
- C. Full Disk Encryption (FDE)
- D. Platform Encryption (PE)
- **E. IP address access control**

Answer: A,B,E

Explanation:

Application layer security in ServiceNow focuses on protecting data and functionality within the ServiceNow application itself. The following components contribute to this:

A: Multi-Factor Authentication (MFA): MFA adds an extra layer of security by requiring users to provide multiple forms of authentication (e.g., password, security token, biometric verification) to access the application.

C: Access Control Lists (ACLs): ACLs define which users or roles have permission to access, modify, or delete specific data and functionality within the application.

E: IP address access control: While technically a network layer control, IP address access control is often implemented and managed within the ServiceNow application. It restricts access to the instance based on IP address ranges.

Why not the other options?

B: Platform Encryption (PE): This is a broader encryption solution that protects data at rest across the platform, not specifically at the application layer.

D: Full Disk Encryption (FDE): This encrypts the entire hard drive of the server where the ServiceNow instance is hosted, providing

protection at the infrastructure level, not the application layer.

NEW QUESTION # 42

• • • • •

It is a common sense that in terms of a kind of ServiceNow Certified Technical Architect (CTA) test torrent, the pass rate would be the best advertisement, since only the pass rate can be the most powerful evidence to show whether the CTA Guide Torrent is effective and useful or not. We are so proud to tell you that according to the statistics from the feedback of all of our customers, the pass rate among our customers who prepared for the exam under the guidance of our ServiceNow Certified Technical Architect (CTA) test torrent has reached as high as 98%to 100%, which definitely marks the highest pass rate in the field. Therefore, you can carry out the targeted training to improve yourself in order to make the best performance in the real exam, most importantly, you can repeat to do the situation test as you like.
