2026 100% Free CTFL-AT –Newest 100% Free Pdf Pass Leader | Latest CTFL-AT Test Voucher

No matter which country or region you are in, our CTFL-AT exam questions can provide you with thoughtful services to help you pass exam successfully for our CTFL-AT study materials are global and warmly praised by the loyal customers all over the world. They have many advantages, and if you want to know or try them before your payment, you can find the free demos of our CTFL-AT learning guide on our website, you can free download them to check the excellent quality.

ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q72-Q77):

NEW QUESTION # 72

Which of the following is NOT a typical task performed by the tester within an Agile team?

- A. Ensuring all project status meetings are held according to the plan.
- B. Suggesting improvements in team retrospectives.
- C. Ensuring the appropriate testing tasks are scheduled during iteration planning.
- D. Working with business stakeholders to clarify requirements.

Answer: A

Explanation:

Explanation

The tester within an Agile team is not responsible for ensuring all project status meetings are held according to the plan. This is typically a task for the Scrum Master, who facilitates the meetings and ensures that the team follows the Agile principles and practices. The tester within an Agile team is responsible for ensuring the appropriate testing tasks are scheduled during iteration planning, suggesting improvements in team retrospectives, and working with business stakeholders to clarify requirements. These are all tasks that contribute to the quality of the software and the testing process, as well as the collaboration and communication within the team and with the customers. References: ISTQB Foundation Level Agile Tester Syllabus, Section 2.3.1, page 171; ISTQB Foundation Level Agile Tester Sample Exam Questions, Question 2.3.1-1, page 82

NEW QUESTION # 73

Which of the following is NOT a statement of value from the Agile Manifesto?

- A. Processes and tools over individuals and interactions.
- B. Working software over comprehensive documentation
- C. Responding to change over following a plan.
- D. Customer collaboration over contract negotiation.

Answer: A

Explanation:

The Agile Manifesto is a declaration of four values and twelve principles that guide the Agile software development approach¹². The four values of the Agile Manifesto are¹²:

- * Individuals and interactions over processes and tools
- * Working software over comprehensive documentation
- * Customer collaboration over contract negotiation
- * Responding to change over following a plan

These values emphasize the importance of human collaboration, working product, customer feedback, and adaptability over rigid processes, extensive documentation, fixed contracts, and predefined plans. The values do not imply that the items on the right are not important, but rather that the items on the left are more important and should be prioritized.

Therefore, the statement that is NOT a value from the Agile Manifesto is B, as it contradicts the first value of the Agile Manifesto.

The correct statement should be "Individuals and interactions over processes and tools". References: ISTQB Foundation Level Agile Tester Extension Syllabus¹, page 10; ISTQB Agile Tester Sample Exam², question 1.

NEW QUESTION # 74

Which two of the following statements are CORRECT with regards to test automation on agile projects?

- 1) Every test developed for past iterations is kept and executed as part of a regression suite for each new release of code.
- 2) It would be very difficult to ensure high quality in an agile project without test automation.
- 3) Automated acceptance tests are run regularly as part of the continuous integration full system build.
- 4) Automated regression suites are only run for the final release of code.
- 5) In agile projects, the results from automated acceptance tests provide feedback on the overall product quality.

- A. 2, 5
- B. 2, 3
- C. 1, 3
- D. 3, 4

Answer: A

Explanation:

Explanation

Test automation is essential for agile projects, as it enables fast and frequent feedback on the quality of the product. Without test automation, it would be very difficult to ensure high quality in an agile project, as manual testing would be too slow and costly to keep up with the pace of development¹². Automated acceptance tests are one of the key types of test automation on agile projects, as they verify that the user stories are implemented correctly and that the product meets the customer's expectations. Automated acceptance tests are run regularly as part of the continuous integration full system build, and the results provide feedback on the overall product quality¹². Therefore, statements 2 and 5 are correct with regards to test automation on agile projects. References: 1: ISTQB Foundation Level Agile Tester Syllabus, Section 3.3.1, Test Automation¹; 2:

NEW QUESTION # 75

Which of the following statements about Agile retrospectives is true?

- A. Metrics such as burndown charts, velocity, and number of stories completed could be effectively used during Agile retrospectives for process improvement
- B. Agile retrospectives should focus exclusively on improving negative aspects, without wasting time in discussions on what worked well during the iteration
- C. All of the improvements identified in an Agile retrospective must be implemented as soon as possible during the next iteration
- D. An Agile retrospective should be held at the end of an iteration only when the number of story points completed by the team in that iteration is lower than the team velocity

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From the CTFL-AT Syllabus v4.0, Section 5.1 Agile Retrospectives and Process Improvement, it states:

"Retrospectives are used to reflect on what went well and what could be improved. They should include qualitative insights and quantitative measures such as velocity, burndown charts, and number of stories completed." Therefore, Option C is correct, as using metrics to support process improvement is a recommended best practice in retrospectives.

* Option A is incorrect - retrospectives should include what went well, not just negatives.

* Option B is inaccurate - not all improvements must be implemented immediately; they are prioritized and planned based on capacity and impact.

* Option D is false - retrospectives are held at the end of every iteration, regardless of story points completed.

CTFL-AT Syllabus v4.0, Section 5.1

Learning Objective (K2) - Understand the purpose and outcomes of retrospectives

NEW QUESTION # 76

Which of the following statements about Agile retrospectives is true?

- A. Agile retrospectives should be focused mainly on obstructions and hindrances that are outside the control of the team because these issues are more challenging
- B. Traditional projects require feedback from retrospectives; however, Agile retrospectives do not require follow-up activities
- C. Agile retrospectives should be focused on the team members and business representatives, and other participants should not attend or contribute
- D. Agile retrospectives should also provide feedback to the current iteration planning regarding planning accuracy, contents, and the efficiency of the work in the team

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From the CTFL-AT Syllabus v4.0, Section 5.1, it states:

"The team uses the retrospective to review how they worked during the iteration, including planning accuracy and team collaboration, and to identify actionable improvements." Thus, Option D is correct - retrospectives help reflect on iteration planning accuracy, team dynamics, and efficiency to improve future iterations.

* Option A is incorrect - retrospectives aim to focus on what the team can improve, not just on external hindrances.

* Option B is false - Agile retrospectives require follow-up, often in the form of action items tracked in the next iteration.

* Option C is incorrect - Product Owner and possibly others may contribute, depending on team context.
