CompTIA Cloud+ (2024) Sample Questions (Q71-Q76):

NEW QUESTION # 71

An e-commerce company is migrating from an on-premises private cloud environment to a public cloud IaaS environment. You are tasked with right-sizing the environment to save costs after the migration. The company's requirements are to provide a 20% overhead above the average resource consumption, rounded up.

INSTRUCTIONS

Review the specifications and graphs showing resource usage for the web and database servers. Determine the average resource usage and select the correct specifications from the available drop-down options.

Answer:

Explanation:

Explanation:
 For the Web Server:
 * CPU: 2 vCPUs
 * RAM: 2GB
 * Disk Speed: 10MBps

For the Database Server:

* CPU: 6 vCPUs

* RAM: 128GB

* Disk Speed: 110MBps

These selections are based on maintaining a 20% overhead above the average resource consumption and rounding up to the next available option in the dropdowns provided.

NEW QUESTION # 72

Users have been reporting that a remotely hosted application is not accessible following a recent migration. However, the cloud administrator is able to access the application from the same site as the users. Which of the following should the administrator update?

- A. Network ACL
- **B. Routing table**
- C. Permissions
- D. Cipher suite

Answer: B

Explanation:

Since the cloud administrator can access the application from the same site but users cannot, it suggests a possible issue with the network routing. The routing table may need to be updated to ensure that traffic from the users' location is correctly directed to the new location of the remotely hosted application after the migration. NEW QUESTION # 73

A cloud administrator is reviewing the annual contracts for all hosted solutions. Upon review of the contract for the hosted mail solution, the administrator notes the monthly subscription rate has increased every year. The provider has been in place for ten years, and there is a large amount of data being hosted. Which of the following is a barrier to switching providers?

- A. Service-level agreement
- B. Encrypted data
- **C. Vendor lock-in**
- D. Memorandum of understanding

Answer: C

Explanation:

Vendor lock-in is a situation where a customer is so dependent on a particular vendor that they cannot easily switch to another vendor. This can happen for a variety of reasons, such as the use of proprietary technology, the lack of documentation, or the high cost of switching.

In this case, the cloud administrator is concerned about the increasing monthly subscription rate for the hosted mail solution. They may also be concerned about the difficulty of migrating the large amount of data that is being hosted. These factors could contribute to vendor lock-in.

NEW QUESTION # 74

A company wants to implement a work environment that will have low operational overhead and highly accessible enterprise resource planning, email, and data resources. Which of the following cloud service models should the company implement?

- A. IaaS
- **B. SaaS**
- C. PaaS
- D. DBaaS

Answer: B

Explanation:

A company that requires low operational overhead and highly accessible enterprise resources would benefit from implementing

Software as a Service (SaaS). SaaS provides access to applications hosted in the cloud, eliminating the need for internal infrastructure or application development, which aligns with the requirement of having low operational overhead. NEW QUESTION # 75

An organization needs to retain its data for compliance reasons but only when required. Which of the following would be the most cost-effective type of tiered storage?

- A. Warm
- B. Cold
- C. Hot
- D. Archive

Answer: D

Explanation:

Archive storage is the most cost-effective type of tiered storage for retaining data that is infrequently accessed and only when required for compliance reasons. It is designed for long-term storage and offers lower storage costs compared to hot, cold, or warm storage tiers.
