

# CV0-004 - CompTIA Cloud+ (2024) Accurate Free Sample Questions

P.S. Free 2025 CompTIA CV0-004 dumps are available on Google Drive shared by Itcertmaster: <https://drive.google.com/open?id=1oyoUjMDBxRzJDz2nqIUt-v62XhkRq8Cg>

CompTIA Cloud+ (2024) exam practice questions play a crucial role in CompTIA Cloud+ (2024) CV0-004 exam preparation and give you insights CompTIA Cloud+ (2024) exam view. You are aware of the CompTIA Cloud+ (2024) CV0-004 exam topics, structure, and a number of the questions that you will face in the upcoming CompTIA Cloud+ (2024) CV0-004 Exam. You can evaluate your Salesforce CompTIA Cloud+ (2024) exam preparation performance and work on the weak topic areas. But here is the problem where you will get CompTIA Cloud+ (2024) exam questions.

For the CV0-004 Test Dumps, we ensure you that the pass rate is 98%, if you fail to pass it, money back guarantee. CV0-004 test dumps contain the questions and answers, in the online version, you can conceal the right answers, so you can practice it by yourself, and make the answers appear after the practice. Besides, the PDF version can be printed into the paper, some notes can be noted if you like, it will help you to memorize.

## Relevant CV0-004 Exam Dumps | CV0-004 Latest Test Pdf

The CompTIA Cloud+ (2024) (CV0-004) web-based practice test is compatible with these browsers: Chrome, Safari, Internet Explorer, MS Edge, Firefox, and Opera. This CompTIA Cloud+ (2024) (CV0-004) practice exam does not require any software installation as it is web-based. It has similar specifications to the CompTIA CV0-004 desktop-based practice exam software, but it requires an internet connection.

## CompTIA Cloud+ (2024) Sample Questions (Q258-Q263):

### NEW QUESTION # 258

A company hosts various containerized applications for business uses. A client reports that one of its routine business applications fails to load the web-based login prompt hosted in the company cloud.

#### INSTRUCTIONS

Click on each device and resource. Review the configurations, logs, and characteristics of each node in the architecture to diagnose the issue. Then, make the necessary changes to the WAF configuration to remediate the issue.

## Answer:

### Explanation:

The issue is with Web app 1 (Finance application).

From the WAF logs, we can see that requests to `https://webapp1.comptia.org/FIN/login.html` are being blocked (Rule ID 1006).

The rule is configured to block access to the finance application's login page. This corresponds to the reported issue of the web-based login prompt not loading.

To remediate the issue, the WAF configuration for Rule ID 1006 should be changed from "Block" to "Allow". This will enable the web-based login prompt to load for the client.

Additionally, the client app configuration indicates that the client laptop (IP 192.168.10.142) is trying to access the service, and the WAF logs show that requests from this IP are being blocked due to the current rule set. Changing the action for Rule ID 1006 will also ensure that legitimate attempts to access the login page from this IP are not blocked.

Steps for remediation:

Go to the WAF configuration.

Find Rule ID 1006 for the Finance application 1.

Change the action from "Block" to "Allow".

Save the changes.

Reference:

Web application firewall (WAF) configurations typically include rules that define which traffic should be allowed or blocked.

Blocking legitimate traffic to login pages can prevent users from accessing the application, which seems to be the case here.

Client application configurations and WAF logs provide valuable insights into the source of the traffic and the rules that are affecting it. It's important to ensure that the rules align with the intended access policies for the application.

#### NEW QUESTION # 259

Users report being unable to access an application that uses TLS 1.1. The users are able to access other applications on the internet. Which of the following is the most likely reason for this issue?

- A. The security team modified user permissions.
- B. The firewall was modified.
- C. Changes were made on the web server to address vulnerabilities.
- D. Privileged access was implemented.

**Answer: C**

Explanation:

If users are unable to access an application that uses TLS 1.1 but can access other internet applications, it is likely that changes were made on the web server to address vulnerabilities, such as disabling outdated and less secure protocols like TLS 1.1.

#### NEW QUESTION # 260

A company implements a web farm with 100 servers behind an application load balancer. During scaling events, new web servers that are placed in service have not loaded all their modules, which causes some requests to the web farm to fail. Which of the following should the cloud engineer implement to address the scaling issue?

- A. Instance warm-up
- B. Scheduled scaling
- C. Event-based scaling
- D. Load balancer passthrough

**Answer: A**

Explanation:

Implementing an instance warm-up period can address the issue of new web servers not having all modules loaded during scaling events. This warm-up period allows new instances to fully initialize and start serving traffic only when they are ready, preventing failed requests. References: Scaling strategies and their operational impact, including the concept of instance warm-up, are covered under cloud infrastructure management in the CompTIA Cloud+ curriculum.

#### NEW QUESTION # 261

A log-parsing application requires significant processing power to ingest the logs streaming from web servers. The engineering team presents the cloud architect with four proposals using the same underlying hardware. Which of the following should the cloud architect select in order to minimize the impact of an instance failure while keeping the cost as low as possible?

- A. Four instances of 4vCPU, 8GB RAM, 80GB HDD
- B. Two instances of 8vCPU, 16GB RAM, 80GB SSD
- C. Four instances of 4vCPU, 8GB RAM, 80GB SSD
- D. Two instances of 8vCPU, 16GB RAM, 80GB HDD

**Answer: C**

Explanation:

Choosing four instances with the given specifications would distribute the load and reduce the impact of any single instance failure. Using SSDs over HDDs would provide faster data processing capabilities which is crucial for a log-parsing application. This setup also retains cost efficiency by not over-provisioning resources.

#### NEW QUESTION # 262

A cloud administrator is looking at the company's cloud services bill for the previous month. The administrator notices on the billing dashboard that certain resources are not being billed to any particular department. Which of the following actions will help correct this billing issue?

- A. Add the resources to the consumer monitoring group.

- B. Modify the tags for all the unmapped resources.
- C. Check the utilization of the resources.
- D. Modify the chargeback details of the consumer.

**Answer: B**

Explanation:

In order to correct the billing issue where certain resources are not being billed to any particular department, the cloud administrator should ensure that all the resources are properly tagged with the correct department or cost center information. This information is used by the billing system to accurately allocate costs to the appropriate departments.

## NEW QUESTION # 263

.....

We have a special technical customer service staff to solve all kinds of consumers' problems on our CV0-004 exam questions. If you have questions when installing or using our CV0-004 practice engine, you can always contact our customer service staff via email or online consultation. They will solve your questions about CV0-004 Preparation materials with enthusiasm and professionalism, giving you a timely response whenever you contact them.
