

CV0-004 Exam Braindumps & CV0-004 Test Quiz & CV0-004 Practice Material

P.S. Free & New CV0-004 dumps are available on Google Drive shared by DumpsQuestion: https://drive.google.com/open?id=1rL-AeT-T2MaDQnCx4Z-GLk_eND1IUdp

365 days free upgrades are provided by CompTIA CV0-004 exam dumps you purchased change. To avoid confusion, get the CompTIA CV0-004 practice exam and start studying. To guarantee success on the first try, subject matter experts have created all of the CompTIA CV0-004 Exam Material.

Candidates may have different ways to practice the CV0-004 study materials, some may like to practice in paper, and some may like to practice it in the computer. We have three versions for you to meet your different needs. If you like to practice in the paper, CV0-004 PDF version will be your choice, which can be printed into the hard one. If you like to practice on your computer, CV0-004 Soft test engine will be your best, choice, besides it also stimulates the exam environment, you can experience the exam environment through this.

CompTIA CV0-004 Exam Dumps - Reliable Way to Pass Exam Instantly

Our company has authoritative experts and experienced team in related industry. To give the customer the best service, all of our company's CV0-004 learning materials are designed by experienced experts from various field, so our CV0-004 Learning materials will help to better absorb the test sites. One of the great advantages of buying our product is that can help you master the core knowledge in the shortest time. At the same time, our CV0-004 Learning Materials discard the most traditional rote memorization methods and impart the key points of the qualifying exam in a way that best suits the user's learning interests, this is the highest level of experience that our most authoritative think tank brings to our CV0-004 learning materials users.

CompTIA Cloud+ (2025) Sample Questions (Q202-Q207):

NEW QUESTION # 202

A cloud administrator wants to provision a host with two VMs. The VMs require the following:

	Host	VM1	VM2
NIC	1Gbps	1Gbps	1Gbps
CPU	4	1	1
RAM	8	2	2
Storage (thin provisioned)	2TB	1.5TB	1.2TB
Storage utilization		22.5%	50%
Daily network traffic		1.2TB	200GB

After configuring the servers, the administrator notices that during certain hours of the day, the performance heavily degrades. Which of the following is the best explanation?

- A. A higher number of processes occur at those times.
- **B. The RAM on each VM is insufficient.**
- C. The storage is overutilized.
- D. The host requires additional physical CPUs.

Answer: B

Explanation:

Given the provided table, the VMs have been allocated 2GB of RAM each, which may be insufficient for their workload, especially during peak hours which could lead to performance degradation. Insufficient RAM can cause the VMs to use swap space on disk, which is significantly slower and can lead to poor performance.

References: CompTIA Cloud+ Certification Study Guide (Exam CV0-004) by Scott Wilson and Eric Vanderburg.

NEW QUESTION # 203

A systems administrator is provisioning VMs according to the following requirements:

- * A VM instance needs to be present in at least two data centers.
- . During replication, the application hosted on the VM tolerates a maximum latency of one second.
- * When a VM is unavailable, failover must be immediate.

Which of the following replication methods will best meet these requirements?

- A. Point-in-time
- B. Snapshot
- C. Transactional
- **D. Live**

Answer: D

Explanation:

Live replication is the process of continuously copying data in real-time to ensure that an exact copy is available in another location. Given the requirement for immediate failover and the presence of the VM instance in at least two data centers, live replication is the best method to meet the one-second maximum latency tolerance and ensure immediate availability in the event of a VM becoming unavailable. Reference: CompTIA Cloud+ Study Guide (Exam CV0-004) - Chapter on Disaster Recovery and Replication Methods

NEW QUESTION # 204

Which of the following requirements are core considerations when migrating a small business's on-premises applications to the cloud? (Select two).

- A. Testing
- **B. Availability**
- C. Hybrid
- D. Logs
- **E. Networking**
- F. Compute

Answer: B,E

Explanation:

When migrating on-premises applications to the cloud for a small business, availability and networking are core considerations. Ensuring that applications are available and that the network is capable of handling the new cloud traffic are pivotal for a successful transition. References: The migration process and its core considerations, including availability and networking, are topics within the Business Principles of Cloud Environments in the CompTIA Cloud+ material.

NEW QUESTION # 205

A company experienced a data leak through its website. A security engineer, who is investigating the issue, runs a vulnerability scan against the website and receives the following output:

```
Nmap scan report for www.example.com (93.184.216.34)
Host is up (0.020s latency).

PORT STATE SERVICE
21/tcp open  ftp
443/tcp open  ssl/http
1119/tcp closed bnetgame
1935/tcp closed rtmp
```

Which of the following is the most likely cause of this leak?

- A. Insecure protocol
- B. RTMP port open
- C. Privilege escalation
- D. SQL injection

Answer: A

Explanation:

The data leak is most likely caused by the use of an insecure protocol. The vulnerability scan output shows that port 21/tcp for FTP (File Transfer Protocol) is open. FTP is known for transmitting data unencrypted, which could allow sensitive data to be intercepted during transfer. References: The security risks associated with the use of insecure or unencrypted protocols are covered under cloud security best practices in the CompTIA Cloud+ curriculum.

NEW QUESTION # 206

A cloud engineer hardened the WAF for a company that operates exclusively in North America. The engineer did not make changes to any ports, and all protected applications have continued to function as expected. Which of the following configuration changes did the engineer most likely apply?

- A. The engineer blocked all traffic originating outside the region.
- B. The engineer completed an upgrade from TLS version 1.1 to version 1.3.
- C. The engineer installed the latest security patches on the WAF.
- D. The engineer implemented MFA to access the WAF configurations.

Answer: A

Explanation:

Given that the WAF was hardened without changing any ports and all protected applications continued to function as expected, it is most likely that the engineer blocked all traffic originating outside of North America, which is the company's operating region. Reference: CompTIA Cloud+ Study Guide (Exam CV0-004) - Chapter on Cloud Security Best Practices

NEW QUESTION # 207

.....

The CV0-004 practice questions that are best for you will definitely make you feel more effective in less time. The cost of CV0-004 studying materials is really very high. Selecting our study materials is definitely your right decision. Of course, you can also make a decision after using the trial version. With our CV0-004 Real Exam, we look forward to your joining. And our CV0-004 exam braindumps will never let you down.
