# CWAP-405 Reliable Exam Sample & Study CWAP-405 Material

Now we can say that the CWNP CWAP-405 exam practice questions are real, valid, and updated as per the Certified Wireless Analysis Professional exam syllabus. So rest assured that with the CWNP CWAP-405 Exam Practice test questions you can ace your exam preparation quickly and be ready to perform well in the final CWNP CWAP-405 certification exam.

In order to meet the different need from our customers, the experts and professors from our company designed three different versions of our CWAP-405 exam questions for our customers to choose, including the PDF version, the online version and the software version. Now I want to introduce the online version of our CWAP-405 learning guide to you. The most advantage of the online version is that this version can support all electronica equipment. If you choose the online version of our CWAP-405 study materials, you can use our products by your any electronica equipment.

Effective CWNP CWAP-405 Reliable Exam Sample With Interarctive Test Engine & Perfect Study CWAP-405 Material

It is universally acknowledged that the pass rate is the most persuasive evidence to prove how useful and effective a kind of CWAP-405 practice test is. In terms of our CWAP-405 training materials, the pass rate is one of the aspects that we take so much pride in because according to the statistics from the feedbacks of all of our customers, under the guidance of our CWAP-405 Preparation materials, the pass rate among our customers has reached as high as 98% to 100%, which marks the highest pass rate in the field. So just feel rest assured to buy our CWAP-405 study guide!

CWNP Certified Wireless Analysis Professional Sample Questions (Q110-Q115):

NEW QUESTION # 110
The network administrator at ABC Engineering has taken a large packet capture from one of their APs running in monitor mode. She has very little knowledge of 802.11 protocols but would like to use the capture file to evaluate the overall health and performance of their wireless network. When she asks your advice, which tool do you recommend she opens the packet capture file with?

- A. Python
- B. Spectrum analyzer
- C. WLAN scanner
- D. Capture visualization tool

Answer: D

Explanation:
A capture visualization tool is a software application that can open a packet capture file and display various graphs, charts, tables, and statistics that illustrate the characteristics and behavior of the wireless network. A capture visualization tool can help a network

administrator with little knowledge of 802.11 protocols to evaluate the overall health and performance of their wireless network by providing a visual and intuitive representation of the captured data. A spectrum analyzer is a hardware device that measures the radio frequency signals in a given frequency range and displays their amplitude, frequency, and modulation. A spectrum analyzer can help identify sources of interference and noise in the wireless environment, but it cannot open a packet capture file. Python is a programming language that can be used to write scripts or applications that manipulate or analyze packet capture files, but it requires coding skills and knowledge of

802.11 protocols. A WLAN scanner is a software application that scans for available wireless networks and displays information such as SSID, BSSID, channel, signal strength, security type, and vendor. A WLAN scanner can help discover wireless networks and their basic parameters, but it cannot open a packet capture file345 References:

NEW QUESTION # 111

In which element of a Beacon frame would you look to identity the current HT protection mode in which an AP is operating?

- A. ERP Information Element
- B. HT Protection Element
- C. HT Operations Element
- D. HT Capabilities Element

Answer: C

Explanation:

The HT protection mode in which an AP is operating can be identified by looking at the HT Operations element in a Beacon frame. The HT Operations element is a part of the Beacon frame that contains information about the High Throughput (HT) capabilities and operation of an 802.11n BSS. The HT Operations element has a field called HT Protection, which indicates how the BSS protects its HT transmissions from interference or collisions with non-HT devices or BSSs. The HT Protection field can have four values: No Protection, Nonmember Protection, 20 MHz Protection, or Non-HT Mixed Mode. The other options are not correct, as they do not contain information about the HT protection mode. The HT Protection element does not exist, the ERP Information element is used for Extended Rate PHY (ERP) protection mode for 802.11g devices, and the HT Capabilities element is used for indicating the supported HT features of an individual device. NEW QUESTION # 112

You are troubleshooting a client that is experiencing slow WLAN performance. As part of the troubleshooting activity, you start a packet capture on your laptop close to the client device. While analyzing the packets, you suspect that you have not captured all packets transmitted by the client. By analyzing the trace file, how can you confirm if you have missing packets?

- A. The missing packets will be shown as CRC errored packets
- B. Protocol Analyzers show the number of missing packets in their statistics view
- C. Look for gaps in the sequence number in MAC headers.
- D. Retransmission are an indication of missing packets

Answer: C

Explanation:

One way to confirm if you have missing packets in your packet capture is to look for gaps in the sequence number in MAC headers. The sequence number is a 12-bit field in the MAC header that is used to identify and order data frames within a traffic stream. The sequence number is incremented by one for each new data frame transmitted by a STA, except for retransmissions, fragments, and control frames. The sequence number can range from 0 to 4095, and then wraps around to 0. If you see a jump or a gap in the sequence number between two consecutive data frames from the same STA, it means that you have missed some packets in between. The other options are not correct, as they do not confirm if you have missing packets in your packet capture. CRC errored packets are packets that have been corrupted during transmission and have failed the error detection check. Protocol analyzers may show the number of CRC errored packets in their statistics view, but not the number of missing packets. Retransmissions are an indication of packet loss or collision, but not necessarily of missing packets in your capture. References: [Wireless Analysis

NEW QUESTION # 113

You are troubleshooting problems with DHCP in relation to lightweight APs. They vendor class identifier (VCI) is not specified in the DHCP server. When you contact vendor support, they inform you that it is not necessary.
When is this information true?

- A. When only one AP exists on the subnet
- B. When only one client option 60 value is required
- C. When the DHCP server is directly connected to the subnet
- D. When only one client option 43 value is required

Answer: D

Explanation:
The DHCP server should be configured to provide the IP address information to the APs, but it may also be required to pass information for option 43. Option 43 is a vendor information option and can be used for any vendor purpose. The vendor class identifier (VCI) (for example, "Cisco AP c3600") is used with option 60 to determine the appropriate information to return with option 43.

NEW QUESTION # 114

802.11k Neighbor Requests and Neighbor Reports are sent in what type of Management Frames?

- A. Action
- B. RRM
- C. Reassociation Request and Reassociation Response
- D. Beacon

Answer: A

Explanation:
802.11k Neighbor Requests and Neighbor Reports are sent in Action frames. An Action frame is a Management frame that is used to perform various operations or functions related to the operation or maintenance of a wireless network. An Action frame consists of a Category field that indicates the type of action being performed, and a variable-length Action Details field that contains specific information related to the action. For example, an Action frame with a Category field value of 5 indicates a Radio Measurement action, and the Action Details field may contain a Neighbor Request or a Neighbor Report subelement .
