You have performed a validation site survey after deploying a WLAN infrastructure in an All-Wireless- Office. One specific application is experiencing delays after transitioning from wired to wireless connectivity.

During validation, you discover that all APs are using 80 MHz channel widths instead of the designed 20 MHz on the 5 GHz band.

What can be done to resolve the delay for this application?

- A. Add more APs using 80 MHz channel-widths
- B. APs should be using 160 MHz channel-widths to get more throughput
- **C. Reconfigure to use 20 MHz channel-widths, so reuse of the frequency is more effective**
- D. Power-off half of the APs to reduce CCI and keep 80 MHz channel-widths

**Answer: C**

#### **NEW QUESTION # 244**

You have initiated a site survey to be performed and the team has been onsite and is halfway through gathering the necessary data. The project sponsor just asked you to make sure the WLAN supports radio frequency identification (RFID) location tracking. How would you possibly characterize this situation?

Response:
