

CWSP-208 study vce & CWSP-208 latest torrent & CWSP-208 download vce

DOWNLOAD the newest PDFDumps CWSP-208 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=19hrPKJdxmIMOVkhgGNvFrYbb8xOfTxGt>

Based on high-quality products, our CWSP-208 guide torrent has high quality to guarantee your test pass rate, which can achieve 98% to 100%. CWSP-208 study tool is updated online by our experienced experts, and then sent to the user. So you don't need to pay extra attention on the updating of study materials. The data of our CWSP-208 exam torrent is forward-looking and can grasp hot topics to help users master the latest knowledge. If you fail the exam with CWSP-208 Guide Torrent, we promise to give you a full refund in the shortest possible time. Of course, if you are not reconciled and want to re-challenge yourself again, we will give you certain discount.

Free demo is available for CWSP-208 training materials, so that you can have a deeper understanding of what you are going to buy. We also recommend you to have a try. In addition, CWSP-208 training materials are compiled by experienced experts, and they are quite familiar with the exam center, and if you choose us, you can know the latest information for the CWSP-208 Exam Dumps. We offer you free update for one year after buying CWSP-208 exam materials from us, and our system will send the latest version to your email automatically. So you just need to check your email, and change the your learning ways in accordance with new changes.

CWNP Valid CWSP-208 Exam Sims: Certified Wireless Security Professional (CWSP) - PDFDumps Easily Pass Exam If Choosing us

The pass rate is 99% for CWSP-208 exam materials, and most candidates can pass the exam by using CWSP-208 questions and answers of us. If you choose us, we can ensure you that you can pass the exam just one time. We will give you refund if you fail to pass the exam, you don't need to worry that your money will be wasted. We offer you free demo to have a try before buying CWSP-208 Exam Dumps, so that you can have a better understanding of what will buy. We have online and offline chat service stuff, and if you have any questions about CWSP-208 exam dumps, you can consult us.

CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q29-Q34):

NEW QUESTION # 29

An attack is under way on the network. The attack is preventing users from accessing resources required for business operations, but the attacker has not gained access to any files or data. What kind of attack is described?

- A. Hijacking
- B. Man-in-the-middle
- C. DoS
- D. ASLEAP

Answer: C

Explanation:

A Denial-of-Service (DoS) attack focuses on preventing legitimate users from accessing network resources. In this case, the attacker has not accessed files or data but is interrupting services. This aligns perfectly with a DoS attack scenario.

CWNP Learning Center: DoS and Availability Attacks

NEW QUESTION # 30

Which of the following security attacks cannot be detected by a WIPS solution of any kind? (Choose 2)

- A. DoS
- B. Social engineering
- C. Rogue APs
- D. Eavesdropping

Answer: B,D

Explanation:

Wireless Intrusion Prevention Systems (WIPS) are excellent for detecting on-air threats such as rogue APs, DoS attacks, spoofing, and misconfigured devices. However, WIPS cannot detect:

C). Eavesdropping - Passive listening on wireless transmissions cannot be detected because no signal is transmitted by the attacker.

D). Social engineering - Human-based attacks like phishing or pretexting fall outside the scope of wireless monitoring.

Incorrect:

A). Rogue APs can be detected via MAC address comparison, frame analysis, and signal triangulation.

B). DoS attacks, such as deauth floods or RF jamming, can be detected with appropriate WIPS sensors.

NEW QUESTION # 31

Given: An 802.1X/EAP implementation includes an Active Directory domain controller running Windows Server 2012 and an AP from a major vendor. A Linux server is running RADIUS and it queries the domain controller for user credentials. A Windows client is accessing the network.

What device functions as the EAP Supplicant?

- A. An unlisted WLAN controller
- B. An unlisted switch

- C. Linux server
- **D. Windows client**
- E. Access point
- F. Windows server

Answer: D

Explanation:

In an 802.1X/EAP authentication model:

Supplicant: The device requesting access (the Windows client).

Authenticator: The AP or switch enforcing access decisions.

Authentication Server: The RADIUS server (Linux in this case), which communicates with a backend credential database (Active Directory).

The Windows client runs the EAP supplicant software to initiate authentication.

Incorrect:

A). The Linux server is the Authentication Server (not Supplicant).

C). The AP acts as the Authenticator.

D). The Windows Server is the credential store, not the supplicant.

NEW QUESTION # 32

You have been recently hired as the wireless network administrator for an organization spread across seven locations. They have deployed more than 100 APs, but they have not been managed in either an automated or manual process for more than 18 months. Given this length of time, what is one of the first things you should evaluate from a security perspective?

- A. The VLANs in use
- B. The channel widths configured
- C. The channels in use
- **D. The firmware revision**

Answer: D

Explanation:

In a security context, outdated firmware is one of the most critical vulnerabilities. Firmware updates typically patch known security issues, fix bugs, and provide new features or improved encryption support. If the APs have not been updated or checked in over 18 months, they could be running firmware with known exploits or lacking critical security patches, making firmware review a top priority.

NEW QUESTION # 33

Given: WLAN protocol analyzers can read and record many wireless frame parameters.

What parameter is needed to physically locate rogue APs with a protocol analyzer?

- A. IP Address
- B. Noise floor
- C. BSSID
- **D. Signal strength**
- E. RSN IE
- F. SSID

Answer: D

Explanation:

While BSSID and SSID help identify and classify rogue APs, physically locating them requires using signal strength (often displayed as RSSI or dBm). By measuring signal strength from different locations, administrators can use a method called "triangulation" or
