EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47

Question:

A backup array was able to achieve a 30:1 reduction by finding multiple copies of the same data. Which method was used in this scenario?

- A. Data replication
- B. Data deduplication
- C. Data encryption
- D. Data compression

Answer: B

Explanation:

Data deduplication is a technique that eliminates redundant copies of data, storing only unique instances.

When multiple copies of the same data are found, deduplication replaces them with references to a single stored copy, significantly reducing storage requirements.

* Data replication: Involves copying data to another location for redundancy, not reducing storage size.

* Data encryption: Secures data but doesn't affect storage size.

* Data compression: Reduces data size by encoding information more efficiently but doesn't eliminate duplicates.

NEW QUESTION # 48

Question:

What is an advantage of deploying intelligent storage systems in the data center?

- A. Migrates data from a data center to the cloud at no cost
- B. Reduces the amount of data to replicate, migrate, and back up
- C. Reduces the complexity of managing information by creating silos of storage
- **D. Enables efficient and optimized storage and management of information**

Answer: D

Explanation:

Intelligent storage systems incorporate advanced features like automated tiering, deduplication, and compression. These features enable efficient storage utilization and optimized management by automating data placement and reducing manual intervention.

* Option A: While intelligent systems may facilitate cloud integration, they do not guarantee cost-free migration.

* Option B: Data reduction features help, but the primary advantage is broader efficiency and optimization.

* Option C: Creating silos increases complexity; intelligent systems aim to unify and simplify storage management.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Intelligent Storage Systems.

NEW QUESTION # 49

Question:

What is a key challenge in managing the variety aspects of Big Data?

- A. Reducing data volume to manageable sizes
- B. Storing transaction-based data over the years
- **C. Combining data from various sources and formats cost-effectively**
- D. Generating real-time data

Answer: C

Explanation:

Big Data's "variety" refers to the challenge of integrating different data types (structured, semi-structured, unstructured) from various sources.

The key challenge is to combine and manage this data cost-effectively, ensuring analytics systems can process it seamlessly.

* Generating real-time data is about velocity, not variety.

* Storing data over years is about volume.

* Reducing volume is more about data management, not variety.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Big Data Characteristics.

NEW QUESTION # 50

Question:

A storage administrator needs to track the performance and availability of storage components and services.

Which storage management function would provide this information?

- A. Alerting
- B. Reporting
- C. Infrastructure discovery
- **D. Monitoring**

Answer: D

Explanation:

Monitoring is the ongoing process of observing and tracking the performance and availability of IT infrastructure, including:
Storage devices

File systems

Ports and connectivity

It helps ensure service levels are met and detect potential issues.

* Reporting: Summarizes data (often based on monitoring data).

* Alerting: Notifies of specific events or thresholds (also uses monitoring data).

* Infrastructure discovery: Detects and inventories devices.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Storage Infrastructure Management Functions.

NEW QUESTION # 51

Question:

A company needs to ensure high availability for its applications and minimize downtime in case of a disk failure. The current storage configuration is a RAID 0 array with SSDs. Which RAID level is most cost effective and would provide the necessary data protection without significant performance degradation?

- **A. Migrate to a RAID 5 array with SSDs for parity-based protection**
- B. Upgrade to a RAID 6 array with SSDs for dual parity protection
- C. Maintain the existing RAID 0 configuration with SSDs
- D. Implement a RAID 1 array with SSDs for disk mirroring

Answer: A
