If you want to pass the exam quickly, D-ISM-FN-01 prep guide is your best choice. We know that many users do not have a large amount of time to learn. In response to this, we have scientifically set the content of the data. You can use your piecemeal time to learn, and every minute will have a good effect. In order for you to really absorb the content of D-ISM-FN-01 Exam Questions, we will tailor a learning plan for you. This study plan may also have a great impact on your work and life. As long as you carefully study the D-ISM-FN-01 study guide for twenty to thirty hours, you can go to the D-ISM-FN-01 exam.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

Question:

A company is experiencing a sudden surge in website traffic due to a successful marketing campaign. The company's IT

infrastructure is struggling to cope with the increased demand, and the website is slowing down. Which cloud computing characteristic would be beneficial in this situation?

- **A. Rapid elasticity**
- B. On-demand self-service
- C. Resource pooling
- D. Measured service

Answer: A

Explanation:

Rapid elasticity is a cloud computing characteristic that allows resources to be scaled up or down quickly and automatically, depending on demand. In the scenario of a sudden traffic surge, rapid elasticity enables the infrastructure to handle increased loads without manual intervention.

* Measured service: Refers to monitoring and billing based on resource usage.

* On-demand self-service: Allows users to provision resources as needed.

* Resource pooling: Involves sharing resources among multiple users.

NEW QUESTION # 15

Question:

Refer to the Exhibit (Port marked "X"): What type of FC port does the "X" represent?

- A. F_port
- **B. E_port**
- C. N_port
- D. NL_port

Answer: B

Explanation:

The exhibit shows a Fibre Channel (FC) switch connected to another FC switch. The port "X" is used for inter-switch link (ISL) connectivity, which is characteristic of an E_port (Expansion Port).

* F_port (Fabric port): Connects an N_port (host or storage device) to a switch.

* N_port (Node port): End device port in FC networks (like HBA in hosts or storage).

* NL_port (Node Loop port): Used for Arbitrated Loop topologies.

* E_port: Connects two FC switches together for ISL, which is exactly what's shown in the exhibit.

NEW QUESTION # 16

Question:

What is a key advantage of cloning a VM?

- A. Ability to run new VMs simultaneously with the same IP address
- B. Improves the performance of existing and new VMs
- C. Saves time when creating multiple identical copies of a VM
- D. Eliminates the need to create multiple snapshots for a VM

Answer: C

Explanation:

VM cloning allows administrators to create exact copies of a virtual machine quickly.

Saves time compared to manually configuring new VMs.

Useful for testing, development, and scaling environments.

Each clone can be independently modified after creation.

* Same IP address is typically not the case (clones get unique addresses).

* Snapshots provide rollback points, not full VM clones.

* Performance does not improve because of cloning itself.

Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Virtualization and Cloning Benefits.

NEW QUESTION # 17

Question:

A customer uses FCIP to connect local and remote FC SANs. The remote SAN is replicated to and used to store daily backup data. Latency over the IP WAN increases to unacceptable levels during peak replication periods. No other data transfer services using the WAN experience the same latency problem.

What is the likely cause of the data replication performance issue?

- A. FCIP gateway FC ports set to TE_Port mode
- B. FCIP gateway FC ports set to EX_Port mode
- C. IP packet segmentation
- D. Ethernet frame segmentation

Answer: C

Explanation:

IP packet segmentation can cause replication performance issues over the WAN.

Since FCIP tunnels FC frames over IP networks, if the IP packet size exceeds the MTU, packets are fragmented and reassembled, increasing latency.

* TE_Port mode is used for trunking, not related to packet fragmentation.

* EX_Port mode is used for inter-switch connectivity (FCR).

* Ethernet frame segmentation is not relevant in FCIP tunneling.

Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: FCIP and IP WAN Connectivity.

NEW QUESTION # 18

Question:

A Fibre Channel switch has eight ports, and all ports must be operational from 6 AM to 6 PM, Monday through Friday. However, a failure of Port 4 occurs within the week as follows:

* Monday: 11 AM to 1 PM

* Wednesday: 5 PM to 10 PM

* Thursday: 7 AM to 10 AM

* Saturday: 11 AM to 1 PM What is the availability of Port 4 in that week?

- A. 80%

- B. 81.6%
- **C. 86.7%**
- D. 90%

Answer: C

Explanation:

Total operational hours required: 12 hours/day × 5 days = 60 hours

Total downtime during required hours:

* Monday: 2 hours

* Wednesday: 1 hour (only 5 PM to 6 PM counts)
