NEW QUESTION # 21

An administrator wants to use NAS Server Mobility to move a NAS server from SPA to SPB on a Dell Unity system. What consideration must they be aware of?

- A. NAS Server Mobility is no longer supported following a software update
- B. DNS configuration will be lost after the move
- C. The system must be in service mode to complete the move
- **D. Any replication sessions must be in a paused state before starting the move**

Answer: D

Explanation:

When using NAS Server Mobility to move a NAS server from SPA to SPB on a Dell Unity system, an administrator must be aware that any replication sessions must be in a paused state before starting the move. This means that any data replication sessions that are configured for the NAS server must be temporarily stopped to avoid data inconsistencies or data loss during the move. Once the move is complete, the replication sessions can be resumed, and data replication will continue as normal. NAS Server Mobility is still supported by Dell Unity, so it's not a concern of the move. The system does not need to be in service mode to complete the move, and the DNS configuration won't be lost after the move, the administrator should make sure that the DNS entries for the NAS server are updated to reflect the new location.

NEW QUESTION # 22

Which statement is true about dynamic node affinity?

- **A. Maintains relatively consistent utilization, latency, and performance between both nodes.**
- B. Trespass affected block volumes between nodes.
- C. Automatically moves NAS servers to the peer node to balance the workload.

Answer: A

Explanation:

Dynamic node affinity in Dell Unity XT systems is designed to maintain relatively consistent utilization, latency, and performance between both nodes. This mechanism ensures that workloads are balanced across the storage processors, optimizing system performance and resource utilization. By dynamically adjusting the workload distribution, it helps in maintaining stable performance and reducing latency. Reference:Dell Unity XT System Architecture

NEW QUESTION # 23

* A RAID 6 dynamic pool in Dell Unity XT systems requires a minimum of 8 drives to configure.

This includes 2 drives for parity and 6 drives for data storage.

* Drive Configuration:

* The minimum configuration ensures that the system can provide the necessary data protection and redundancy while maintaining performance.

* Dell Midrange Storage References:
