EMC Dell Midrange Storage Solutions Design 2023 Sample Questions (Q35-Q40):

NEW QUESTION # 35

A customer site has four NAS servers participating in MetroSync replication. Which Dell EMC Unity feature could reduce failover times?

- A. QoS Failover Policy
- B. Cabinet Failover
- C. SRDF Metro
- D. Consistency Groups

Answer: B

NEW QUESTION # 36

When designing a Metro Volume, what configuration must be implemented to avoid unnecessary storage and compute resource usage?

- A. Use DRS affinity rules.
- B. Use MRU for PSP.
- C. Use storage containers.
- D. Place witness at a third site.

Answer: D

Explanation:
When designing a Metro Volume, placing the witness at a third site is crucial to avoid unnecessary storage and compute resource usage. The witness helps in maintaining quorum and ensuring the consistency of the Metro Volume in case of a site failure. Here's how it works:
Witness at Third Site: Placing the witness at a separate, third site ensures that it can independently verify the status of the primary and secondary sites, maintaining high availability and failover capabilities without consuming significant resources.
Avoids Resource Usage: By offloading the witness function to a third site, the primary and secondary sites can focus their resources on storage and compute tasks without the overhead of managing quorum.

NEW QUESTION # 37

A customer has a data center with 30 different applications running on 30 volumes presented from PowerStore. They want to design a DR site within 300 km with 15 min RPO using storage-based asynchronous replication. Which protection policy design leads to most stable storage performance?

- A. Create a single protection policy assigned to 30 volumes, each scheduled with a five minute shift from each other.
- B. Create two protection policies that are assigned to 15 volumes, each scheduled with a five minute shift from each other.
- C. Create 30 protection policies that are assigned to a single volume, each scheduled with a one minute shift from each other.
- D. Create 15 protection policies that are assigned to a pair of volumes, each scheduled with a one minute shift from each other.

Answer: A

Explanation:
In a scenario where a customer needs to design a DR site with a 15-minute RPO using storage-based asynchronous replication, creating a single protection policy assigned to 30 volumes with a five-minute shift between each volume is the most stable design. This approach ensures that the replication load is evenly distributed over time, minimizing the impact on storage performance.

NEW QUESTION # 38

A customer has three Dell PowerStore 1000Ts in a cluster and wants to add a PowerStore 5000X.

What must they do?

- A. Use the PowerStore CLI to add the appliance.
- B. Reconfigure the existing cluster.
- C. Use the PowerStore Manager to add the appliance.
- D. Create a cluster with the 5000X.

Answer: D

Explanation:
PowerStore Clustering:
PowerStore appliances can be clustered to form a single management entity. However, adding different models within the same cluster follows specific guidelines.
Cluster Compatibility:
PowerStore 1000T and 5000X are different models with potentially different hardware configurations and capabilities.
Dell recommends creating a new cluster with the PowerStore 5000X instead of mixing models within an existing cluster to ensure compatibility and optimal performance.
Adding Appliances:
Using the PowerStore CLI or PowerStore Manager to add appliances within the same model range is common, but mixing models generally requires creating a separate cluster.

NEW QUESTION # 39
On what host operating systems can the Grab tool run?

- A. OS/390, Windows, and Linux
- B. Windows, UNIX, and ESXi
- C. Linux, macOS, and Tru64
- D. ESXi, ChromeOS, and OS/390

Answer: B

Explanation:
Grab Tool Overview:
The Grab tool is used for collecting diagnostic information from host systems to aid in troubleshooting and performance analysis.
Supported Operating Systems:
The Grab tool can run on a variety of host operating systems, including Windows, UNIX, and ESXi.
This broad support ensures that administrators can gather necessary diagnostic data across different environments.
