EMC Dell Technologies PowerMax Operate Sample Questions (Q57-Q62):

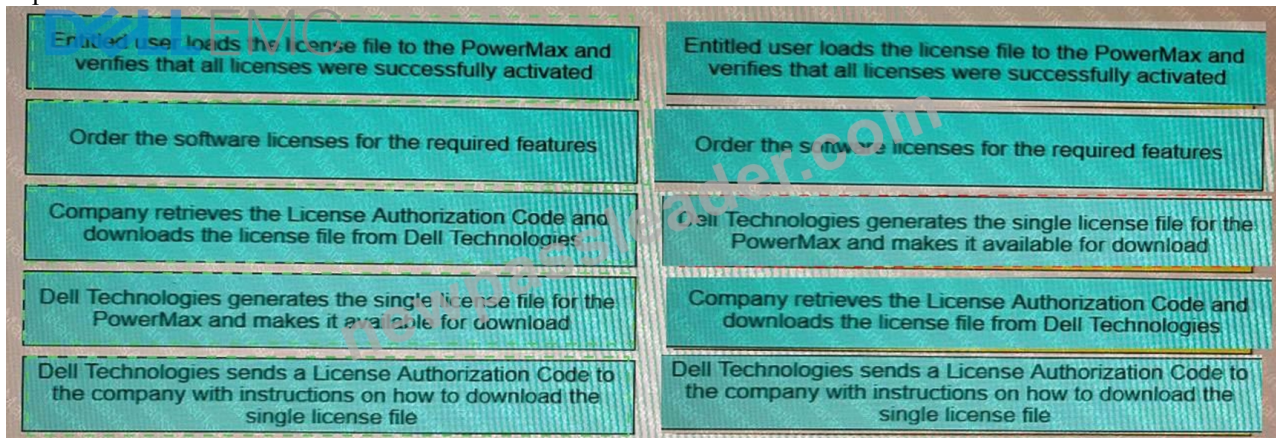

NEW QUESTION # 57

What is the correct sequence of steps to obtain PowerMax licenses and ensure the PowerMax is configured to allow the licensed features to work properly?

Answer:

Explanation:

NEW QUESTION # 58

Refer to the exhibit.

What is the Unisphere for PowerMax deployment option pictured?

- A. Remote
- B. Local
- C. Embedded
- D. Either remote or local

Answer: A

Explanation:

Step by Step Comprehensive Detailed Explanation:

Unisphere for PowerMax offers different deployment options to manage PowerMax storage arrays. Based on the exhibit, we can identify the following:

- * **Separate SYMAPI Server:**The diagram shows a dedicated SYMAPI server. SYMAPI (Symmetrix Application Programming Interface) is a command-line interface used to manage PowerMax and VMAX storage arrays. This indicates that the Unisphere server is not directly connected to the storage arrays.

- * **Unisphere Server Connected to SYMAPI Server:**The Unisphere server is shown to be connected to the SYMAPI server. This means that the Unisphere server relies on the SYMAPI server to communicate with the PowerMax arrays.

- * **No Direct Connection to Arrays:**The Unisphere server does not have a direct connection to the PowerMax arrays.

Considering these points, the deployment option depicted in the exhibit is a remote deployment. In a remote deployment, the Unisphere server is installed on a separate host and communicates with the PowerMax arrays through a SYMAPI server. This allows for centralized management of multiple arrays from a single Unisphere instance.

Why other options are incorrect:

- * **A. Embedded:**In an embedded deployment, the Unisphere software runs directly on the PowerMax array itself. This eliminates the need for a separate Unisphere server.

- * **B. Either remote or local:**While the diagram could technically represent a local deployment with a dedicated SYMAPI server, the presence of the separate SYMAPI server and the lack of direct connection to the arrays strongly suggest a remote deployment.

- * **D. Local:**In a local deployment, the Unisphere server is typically installed on the same host as Solutions Enabler, which has direct connectivity to the storage arrays.

It also includes diagrams and explanations of each deployment scenario. You can find this document on the Dell Support website by searching for "Unisphere for PowerMax Installation Guide."

- * **Dell PowerMax Family: Essentials and Best Practices Guide:**This guide offers a general overview of PowerMax systems and their management using Unisphere. It may provide context for understanding the different deployment options.

NEW QUESTION # 59

What is the largest TDEV PowerMaxOS 5978 can create?

- **A. 64TB**
- B. 256TB
- C. 32 TB
- D. 128 TB

Answer: A

Explanation:

Step by Step Comprehensive Detailed Explanation:

In PowerMaxOS 5978, the largest TDEV (Thin Device) that can be created is 64TB. This represents the maximum size for a single, thinly provisioned storage volume on a PowerMax array running that version of the operating system.

- * **Dell PowerMax Family: Essentials and Best Practices Guide:**This guide provides an overview of PowerMax features and capabilities, including information about storage device sizes and limits.

- * **Dell Solutions Enabler 10.0.0 CLI User Guide:**This guide might contain details about the maximum size of TDEVs that can be created using SYMCLI commands.

NEW QUESTION # 60

What information would you expect to see under the System > Hardware view on a newly installed Unisphere for PowerMax deployment on 2000 and 8000 series arrays?

- A. Capacity, performance, and protection
- B. Provision, protect and set host I/O limits
- C. 10 Profile, performance thresholds, and anomaly detection
- **D. Front-end director, back-end director, and RDF**

Answer: D

Explanation:

Step by Step Comprehensive Detailed Explanation:

Unisphere for PowerMax provides a "System > Hardware" view that offers insights into the physical components of your PowerMax storage array. On newly installed 2000 and 8000 series arrays, this view would typically show information about:

* Front-end directors: These directors handle host connectivity and data transfer to and from the array.

The view would likely display details about the number of front-end directors, their types, and their status.

* Back-end directors: These directors manage the connection to the physical disks (storage media) within the array. The view may show the number of back-end directors, their types, and their status.

* RDF (Remote Data Facility): If the array is configured for SRDF replication, the hardware view might display information about the RDF directors or components responsible for managing remote replication.

Why other options are incorrect:

* A. Capacity, performance, and protection: While these are important aspects of a PowerMax system, they are typically found in other sections of Unisphere, such as the "Dashboard" or "Storage" views.

* B. Provision, protect and set host I/O limits: These are management functions accessible through Unisphere, but not typically displayed directly under the "System > Hardware" view.

* D. I/O Profile, performance thresholds, and anomaly detection: These are related to performance monitoring and analysis, which are usually found in the "Performance" section of Unisphere.

References and documents of Dell's public documentation for PowerMax Operate v.2:

* Dell Unisphere for PowerMax 10.0.0 Online Help: The online help for Unisphere provides detailed information about the different views and functionalities available within the tool. You can access this help within Unisphere itself or on the Dell Support website.

* Dell PowerMax Family: Essentials and Best Practices Guide: This guide offers a general overview of PowerMax systems and their management using Unisphere. It may provide context for understanding the information displayed in the "System > Hardware" view.

NEW QUESTION # 61

What is the maximum number of bricks that can be configured on a PowerMax 8000 system bay?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A
