

D-PWF-DY-A-00 Valid Learning Materials, D-PWF-DY-A-00 Study Guides

Some customers might worry that passing the exam is a time-consuming process. Now our D-PWF-DY-A-00 actual test guide can make you the whole relax down, with all the troubles left behind. Involving all types of questions in accordance with the real exam content, our D-PWF-DY-A-00 exam questions are compiled to meet all of your requirements. The comprehensive coverage would be beneficial for you to pass the exam. Only need to spend about 20-30 hours practicing our D-PWF-DY-A-00 study files can you be fully prepared for the exam. With deeply understand of core knowledge D-PWF-DY-A-00 actual test guide, you can overcome all the difficulties in the way. So our D-PWF-DY-A-00 exam questions would be an advisable choice for you.

D-PWF-DY-A-00 Guide Quiz helped over 98 percent of exam candidates get the certificate. Before you really attend the EMC D-PWF-DY-A-00 exam and choose your materials, we want to remind you of the importance of holding a certificate like this one. Obtaining a EMC D-PWF-DY-A-00 certificate likes this one can help you master a lot of agreeable outcomes in the future, like higher salary, the opportunities to promotion and being trusted by the superiors and colleagues.

Correct D-PWF-DY-A-00 Valid Learning Materials & Leader in Qualification Exams & Trustable D-PWF-DY-A-00: Dell PowerFlex Implementation Achievement

We have authoritative production team made up by thousands of experts helping you get hang of our Dell PowerFlex Implementation Achievement study question and enjoy the high quality study experience. We will update the content of D-PWF-DY-A-00 test guide from time to time according to recent changes of examination outline and current policies, so that every examiner can be well-focused and complete the exam focus in the shortest time. We will provide high quality assurance of D-PWF-DY-A-00 Exam Questions for our customers with dedication to ensure that we can develop a friendly and sustainable relationship.

EMC Dell PowerFlex Implementation Achievement Sample Questions (Q14-Q19):

NEW QUESTION # 14

Which tool can be used to install the SDR component in a PowerFlex 4.x cluster?

- A. PowerFlex WebUI
- B. vSphere Plug-In
- C. PowerFlex Manager
- D. Installation Manager

Answer: D

Explanation:

The SDR (Storage Data Router) is a critical component of PowerFlex that manages data routing, communication between components (e.g., SDS, SDC), and metadata operations. For PowerFlex 4.x clusters, Installation Manager (IM) is the officially

recommended and verified tool for deploying the SDR component.

Key References from Dell PowerFlex Documentation:

* PowerFlex 4.x Installation Guide:

* Installation Manager is a command-line utility used to automate the deployment of PowerFlex components, including SDR nodes. The guide explicitly states that IM simplifies the installation of SDS, SDC, MDM, and SDR nodes across physical or virtual machines.

NEW QUESTION # 15

Where are DNS server records configured when deploying the PowerFlex Management Controller VMs?

- A. Routes
- B. hosts
- C. ifcfg-eth<#>
- D. Config

Answer: B

Explanation:

When deploying the PowerFlex Management Controller (PFMC) VMs, DNS server records are configured in the hosts file. This step ensures that the PFMC VMs can resolve hostnames for proper communication with other components in the PowerFlex environment. The Dell PowerFlex Deployment Guide explicitly mentions the use of the hosts file for DNS configuration during the deployment process.

* Static Name Resolution: The hosts file provides a simple and reliable way to map hostnames to IP addresses. This is particularly useful during the initial deployment phase when DNS servers may not yet be fully configured or available.

* Ease of Configuration: Modifying the hosts file is straightforward and does not require setting up a full DNS server infrastructure.

* B. Config: The "Config" option is too vague and does not refer to a specific configuration file or location for DNS records.

* C. Routes: Routes are used for defining network paths, not for DNS resolution. They are unrelated to configuring DNS server records.

* D. ifcfg-eth<#>: The ifcfg-eth<#> files are used for configuring network interfaces on Linux systems.

They are not used for DNS server record configuration.

* Dell PowerFlex Deployment Guide (Version 4.x): Specifies the use of the hosts file for DNS configuration during the PFMC deployment process.

* PowerFlex Manager User Guide: Provides instructions for configuring network settings, including DNS resolution, during the deployment of PFMC VMs.

Why the hosts file is used: Why the other options are incorrect: Key References: By following these guidelines, administrators can ensure that the PFMC VMs are properly configured for DNS resolution, enabling seamless communication within the PowerFlex environment.

NEW QUESTION # 16

PowerFlex is being deployed on the Management Controller. Three MDMs have been added to the cluster.

```
pfmc-192.168.140.4: / # scli --query_cluster
Cluster:
  Mode: 1_node, State: Normal, Active: 1/1, Replicas: 1/1
  Virtual IP Addresses: 192.168.141.9, 192.168.142.9
Primary MDM:
  Name: pfmc-svm-4, ID: 0x544c45c43d8d4300
  IP Addresses: 192.168.141.1, 192.168.142.1, Port: 9011, Virtual IP interfaces: eth1, eth2
  Management IP Addresses: 192.168.140.4, Port: 8611
  Status: Normal, Version: 4.0.100
Standby MDMs:
  Name: pfmc-svm-5, ID: 0x092f39a25374a801, Manager
  IP Addresses: 192.168.141.2, 192.168.142.2, Port: 9011, Virtual IP interfaces: eth1, eth2
  Management IP Addresses: 192.168.140.5, Port: N/A
  Name: pfmc-svm-6, ID: 0x77f15df67310d802, Tie Breaker
  IP Addresses: 192.168.141.3, 192.168.142.3, Port: 9011
pfmc-192.168.140.4: / #
```

Which step should you take next?

- A. Convert the cluster to a multi-node cluster.

- B. Move on to creating protection domains.
- C. Add a second MDM to the cluster.
- D. Add a tie breaker MDM to the cluster.

Answer: A

Explanation:

After deploying three MDMs (Metadata Managers) in a PowerFlex cluster, the next critical step is to convert the cluster to a multi-node configuration. This ensures the cluster leverages the redundancy and fault tolerance provided by the three MDMs (one active primary, one standby, and one Tie-Breaker).

Key References from Dell PowerFlex Documentation:

* PowerFlex 4.x Administrator Guide:

* A multi-node cluster requires at least three MDMs (two primary MDMs in active/standby roles and one Tie-Breaker). After adding these MDMs, the cluster must be explicitly converted to a multi-node configuration using the command:

```
scli --convert_cluster_to_multi_node
```

NEW QUESTION # 17

Which area in PowerFlex Manager do you go to in order to discover switches?

- A. Protection
- **B. Resources**
- C. Settings
- D. Lifecycle

Answer: B

Explanation:

The Resources section in PowerFlex Manager is where administrators go to discover and manage physical and virtual infrastructure components, including switches:

* Resources Overview (Option A):

* The Resources area provides a centralized view of hardware and software components, including switches, nodes, and other devices.

* Discovery of switches involves scanning the network to identify switch configurations and integrate them into the PowerFlex environment for monitoring and management.

* Why Not the Other Options?

* Option B: Protection: This area focuses on data protection and backup solutions within PowerFlex, not hardware discovery.

* Option C: Lifecycle: While Lifecycle helps manage the firmware and software updates, it does not handle hardware discovery tasks.

* Option D: Settings: The Settings section is used for configuring PowerFlex Manager itself, such as network settings and system options, not discovering switches.

References:

* Dell EMC PowerFlex Manager User Guide

NEW QUESTION # 18

Place the PowerFlex implementation steps in the correct order.

Steps	Correct Order
Prepare the environment.	
Deploy the PowerFlex Management Controller	
Perform post-installation tasks.	
Deploy PowerFlex Manager Templates.	
Install PowerFlex Manager.	

Answer:

Explanation:

Explanation:

The correct order for implementing PowerFlex is as follows:

- * Prepare the environment.
- * Ensure that hardware, networking, and software prerequisites are met.
- * Configure the required infrastructure, including switches and IP addresses.
- * Deploy the PowerFlex Management Controller.
- * Install and configure the Management Controller to serve as the central management hub.
- * Deploy PowerFlex Manager Templates.
- * Deploy necessary OVA's for PowerFlex Manager and configure the virtual machines.
- * Install PowerFlex Manager.
- * Install PowerFlex Manager for centralized lifecycle and cluster management.
- * Perform post-installation tasks.
- * Validate the setup, configure cluster policies, and enable features such as HA, DRS, and protection domains.
