Popular NCP-DB-6.10 Exams | Reliable Test NCP-DB-6.10 Test

Exam NCP-DB-6.10 is just a piece of cake if you have prepared for the exam with the helpful of ActualtestPDF's exceptional study material. If you are a novice, begin from NCP-DB-6.10 study guide and revise your learning with the help of testing engine. Exam NCP-DB-6.10 Brain Dumps is another superb offer of ActualtestPDF that is particularly helpful for those who want to the point and

the most relevant content to pass exam. With all these products, your success is assured with 100% money back guarantee.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q241-Q246):

NEW QUESTION # 241

An administrator wants to manage an additional database on an existing database server VM.
What field should the administrator look in for this new database?

- **A. Unregistered Databases**
- B. Registered Databases
- C. Database Name in NDB
- D. Database Server VM

Answer: A

Explanation:

When an administrator wants to manage an additional database on an existing database server VM in NDB, the first step is to identify if the database is already recognized by NDB. The "Unregistered Databases" field or section within the NDB interface lists databases that are present on a registered database server VM but have not yet been registered with NDB. This allows the administrator to discover and register the new database, enabling full management capabilities (e.g., provisioning, cloning, or patching). Once registered, the database will move to the "Registered Databases" section.

NEW QUESTION # 242

Which disk is omitted from a Software Profile?

- A. System Database
- B. User Database
- **C. System Page File**
- D. SQL Installation

Answer: C

Explanation:

According to the Nutanix Database Automation (NCP-DB) course, a Software Profile is a template that defines the configuration of the database engine, such as the version, edition, features, and parameters. It also specifies the disk layout for the database installation, such as the size, type, and mount point of each disk. However, the System Page File disk is omitted from the Software Profile, as it is automatically created by the NDB service based on the memory size of the database server VM. The other options are included in the Software Profile, as they are essential for the database operation and performance.

NEW QUESTION # 243

Where are two locations an administrator would find the size of a Source Database? (Choose two.)

- A. On the Profiles > Database Parameters list for the assigned DB Parameter Profile.
- **B. On the Era Dashboard Database Summary Table under Source Database.**
- C. Under the Capacity widget on the Database Server VMS > List database summary page.
- **D. On the Databases > Sources table.**

Answer: B,D

Explanation:

Option A: On the Era Dashboard Database Summary Table under Source Database. The dashboard provides a summary of the databases, including their sizes.

Option C: On the Databases > Sources table. This table provides detailed information about the databases, including their sizes.

NEW QUESTION # 244

A database administrator is working with a cloned database and creates a clone removal schedule. Which two default actions are taken on the cloned database? (Choose two.)

- A. NDB marks the cloned database as offline.
- **B. NDB deletes the cloned database.**
- **C. NDB de-registers the cloned database.**
- D. NDB deletes the cloned database VM.

Answer: B,C

Explanation:

When a database administrator creates a clone removal schedule in NDB, the system automates the cleanup of cloned databases based on the defined schedule (e.g., after a set retention period). The two default actions taken on the cloned database are:

NDB deletes the cloned database: The clone's data is removed from storage to free up space.

NDB de-registers the cloned database: The clone is removed from NDB's management inventory, ensuring it no longer appears in the GUI or is tracked.

NEW QUESTION # 245

A database administrator is tasked with creating a new clone of a running SQL database. During the clone process, there are no authorized servers available.

What should the administrator do next?

- A. Click the Skip icon and choose to authorize later.
- B. Register or provision a new database VVI
- C. Register or provision a new authorized server VVI.
- **D. Click the Action icon to authorize one or more database server VMs.**

Answer: D

Explanation:

In the Nutanix Database Automation (NCP-DB) process, when a database administrator is tasked with creating a new clone of a running SQL database and there are no authorized servers available, the administrator should click the Action icon to authorize one or more database server VMs. This is because the Nutanix Database Service (NDB) requires authorized servers to perform operations such as cloning. The authorization process allows the NDB to manage and perform operations on the database server VMs.

NEW QUESTION # 246

.....

If you are having the same challenging problem, don't worry; Nutanix is here to help. Our direct and dependable Nutanix Treasury with Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Exam Questions in three formats will surely help you pass the Nutanix Treasury with NCP-DB-6.10 certification exam.
