Exam AD0-E124 Training | Exam AD0-E124 Assessment

The emerging field of information technology has created a vast space for Adobe AD0-E124 certification exam holders to get promotions and high-paying jobs. Thousands of candidates don't clear the Adobe Experience Manager DevOps Engineer Expert (AD0-E124) exam because they have short time and they don't prepare for the AD0-E124 exam questions. It results in a loss of time, money, and confidence. ActualVCE is here to save you from this unfortunate situation with its Real AD0-E124 Exam Questions. These Adobe AD0-E124 Exam Questions are enough to ace the AD0-E124 exam and move forward into Adobe sector with full ease and confidence.

Adobe Experience Manager DevOps Engineer Expert Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which Cloud Manager feature is primarily used to monitor AEM performance metrics?

- A. Deployment Pipeline Dashboard
- B. Adobe I/O Event Logs
- **C. Cloud Manager Quality Gate**
- D. AEM Operations Dashboard

Answer: C

NEW QUESTION # 33

A customer's development team is expanding and requires more development environments to be added to the AEM as a Cloud Service. There is no visible option via the Cloud Manager UI to add a new development environment under the current program. What should the DevOps engineer do?

- A. Add a new runmode via OSGi configuration.
- B. Add a new sandbox program via the Cloud Manager UI.
- **C. Advise the customer to contact the Adobe account team.**

Answer: C

Explanation:

In AEM as a Cloud Service, the number of provisioned environments (especially Development, Stage, and Production environments) is strictly governed by the customer's commercial license and contract. If the "Add Environment" button is disabled or missing in Cloud Manager, it means the organization has reached its licensed limit. Technical teams cannot bypass this via the UI or OSGi. The DevOps engineer must advise the business to contact their Adobe Account Executive or Customer Success Engineer to procure and provision additional cloud environments.

NEW QUESTION # 34

The project builds and deploys successfully on a local environment. A DevOps engineer deploys the same project source code on

an AEM as a Cloud Service Non-Production pipeline. The pipeline fails at the Build & Unit Testing stage.

The end of the build_maven_build.log shows the following log messages:

[INFO] SITS Sites Project - Project Analyser FAILURE

[ERROR] Failed to execute goal org.apache.maven.plugins:maven-assembly-plugin:3.1.1:single (default) project aem-kit-sits:analyse: Failed to create assembly: Error creating assembly archive distribution: archive cannot be empty The non-production pipeline was run once more, and the build failed at the same step with the same errors in the build log file. How should the DevOps engineer resolve this issue?

- A. Check if all OSGi bundles have their Import-Package(s) declared and add any that are missing.
- B. Update the AEM Analyzer to the latest version in the main pom.xml.
- C. Reconfigure the analyzer plugin to ignore the assembly phase.
- D. Update the Maven Assembly Plugin to the latest version in the main pom.xml.

Answer: A

Explanation:

AEM as a Cloud Service enforces strict architectural rules analyzed by the aemanalyser-maven-plugin. This analyzer scans the compiled project to ensure it is compliant with cloud standards. If a custom OSGi bundle relies on external Java packages but fails to explicitly declare them in the Import-Package section of its manifest (often managed by the bnd-maven-plugin), the analyzer feature model validation will fail. This failure frequently manifests as a downstream assembly error where the analyzer's output archive is empty because it crashed during bundle inspection. Resolving the missing Import-Package headers fixes the analyzer model creation.

NEW QUESTION # 35

Which actions should be taken to ensure OSGi configurations persist after AEM restarts? (Choose three)

- A. Use AEM Cloud Manager pipelines to deploy settings
- B. Deploy configurations via a package
- C. Store .config or .cfg.json files under /apps/<project>/config
- D. Manually update configurations in the Web Console before every restart

Answer: A,B,C

NEW QUESTION # 36

A customer of multiple Adobe Experience Cloud products, including Analytics, Tags, and AEM as a Cloud Service, recently onboarded a new team for their Technical Documentation site. This team is separate from the team that manages the Marketing site. The Marketing team was the first group to start using AEM, and they originally named their Admin Console group, "AEM Authors". To enable independent permissions management for both teams, the Admin Console Administrator renames the "AEM Authors" group to "Marketing AEM Authors", and adds a separate group for the Technical Documentation authors.

The DevOps engineer receives a report from the Marketing team that a new team member is unable to access the Production environment after being added to the "Marketing AEM Authors" group in Admin Console.

What should the DevOps engineer do?

- A. Using repointit, change the rep:externalid property for the "AEM Authors" group to "Marketing AEM Authors;ims".
- B. Using repointit, migrate the user accounts from the "Marketing AEM Authors" group to the "AEM Authors" group.
- C. In AEM, rename the "AEM Authors" group to "Marketing AEM Authors" to match the Admin Console group name.
- D. In AEM, make the "Marketing AEM Authors" group a member of the same group as the "AEM Authors" group.

Answer: D

Explanation:

When an Admin Console (IMS) group is renamed, it synchronizes into AEM as an entirely new group, leaving the old group intact. The new "Marketing AEM Authors" group has no permissions mapped to it inside AEM, which is why the new user cannot access anything. Trying to rename the AEM group or manipulate its backend ID (rep:externalid) can break IMS synchronization. The standard, safest best practice is to take the newly synchronized IMS group ("Marketing AEM Authors") and add it as a member of the existing AEM permission structure (the original "AEM Authors" group, or the underlying AEM content- authors group). This grants the new IMS group all inherited permissions seamlessly.

NEW QUESTION # 37
