NEW QUESTION # 213
An administrator wants to determine if brute-force password attacks are being used against the org. A brute-force attack is when

multiple password combinations are attempted in a short time period.
Where should the administrator look for more information?

- A. User Field History Tracking
- B. Connected Apps OAuth Usage
- C. Login Forensics
- D. Event Manager

Answer: C

Explanation:
Login Forensics is a Salesforce feature that allows you to monitor and analyze login behavior and trends in your org. It can help you identify and prevent brute-force password attacks by showing you the number of login attempts, successes, and failures per user, location, and device. You can also set up alerts to notify you when a user exceeds a certain number of login failures or when a login originates from an unusual location or device. - B. Account Teams
- C. Custom Profile
- D. Permission Set

Answer: B

NEW QUESTION # 217
DreamHouse Realty wants to notify an assigned agent when an appointment Is booked on a custom object for one of their listed homes along with the total number of appointments booked so far. The administrator has configured a Roll-up Summary for the number of appointments as well as a flow to detect the creation of a new appointment and send the information to the agent.
What consideration about process automation should the administrator be aware of to ensure the right Information is delivered?

- A. Roll-up Summary calculations run after processes and workflows.
- B. Only standard objects can be used with Roll-up Summary fields.
- C. Rows can only be triggered from the records created on standard objects.
- D. Roll-up Summary calculations will prevent a Mow from being triggered.

Answer: A

Explanation:
Roll-up Summary calculations are performed after processes and workflows are executed, which means that any changes made by processes or workflows will not be reflected in the roll-up summary field until after the transaction is committed. This could cause inaccurate or outdated information to be delivered to the agent if the flow relies on the roll-up summary field value.
