

Get Unparalleled Top SOA-C02 Exam Dumps and Pass Exam in First Attempt

P.S. Free & New SOA-C02 dumps are available on Google Drive shared by DumpsValid: https://drive.google.com/open?id=1KDruEcQOpz36CKiHG17X_6yllooSqg-Y

For most users, access to the relevant qualifying examinations may be the first, so many of the course content related to qualifying examinations are complex and arcane. According to these ignorant beginners, the SOA-C02 exam questions set up a series of basic course, by easy to read, with corresponding examples to explain at the same time, the AWS Certified SysOps Administrator - Associate (SOA-C02) study question let the user to be able to find in real life and corresponds to the actual use of learned knowledge, deepened the understanding of the users and memory. Simple text messages, deserve to go up colorful stories and pictures beauty, make the SOA-C02 Test Guide better meet the zero basis for beginners, let them in the relaxed happy atmosphere to learn more useful knowledge, more good combined with practical, so as to achieve the state of unity.

SOA-C02 training dumps are created in the most unique, customized way so it can cover different areas of exam with the Quality and Price of the product which is unmatched by our Competitors. The 100% guarantee pass pass rate of SOA-C02 training materials that guarantee you to pass your Exam and will not permit any type of failure. You will find every question and answer within SOA-C02 Training Materials that will ensure you get any high-quality certification you're aiming for.

Excellent Offers By DumpsValid – Free Amazon SOA-C02 Dumps Updates and Free Demo

The AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) practice test software also keeps a record of attempts, keeping users informed about their progress and allowing them to improve themselves. This feature makes it easy for SOA-C02 desktop-based practice exam software users to focus on their mistakes and overcome them before the original attempt. Overall, the Windows-based AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) practice test software has a user-friendly interface that facilitates candidates to prepare for the AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) exam without facing technical issues.

Amazon SOA-C02 certification exam is a popular certification offered by Amazon Web Services (AWS) for individuals seeking to become certified as a SysOps Administrator. SOA-C02 Exam is designed to validate an individual's knowledge of AWS services and their ability to operate and manage them in a production environment.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q246-Q251):

NEW QUESTION # 246

A media company hosts a public news and video portal on AWS. The portal uses an Amazon DynamoDB table with provisioned capacity to maintain an index of video files that are stored in an Amazon S3 bucket. During a recent event, millions of visitors came to the portal for news. This increase in traffic caused read requests to be throttled in the DynamoDB table. Videos could not be displayed in the portal.

The company's operations team manually increased the provisioned capacity on a temporary basis to meet the demand. The company wants the operations team to receive an alert before the table is throttled in the future. The company has created an Amazon Simple Notification Service (Amazon SNS) topic and has subscribed the operations team's email address to the SNS topic.

What should the company do next to meet these requirements?

- **A. Create an Amazon CloudWatch alarm that uses the ConsumedReadCapacityUnits metric. Set the alarm threshold to a value that is close to the DynamoDB table's provisioned capacity. Configure the alarm to publish notifications to the SNS topic.**
- B. Turn on Amazon CloudWatch Logs for the DynamoDB table. Create an Amazon CloudWatch metric filter to pattern match the THROTTLING_EXCEPTION status code from DynamoDB. Create a CloudWatch alarm for the metric. Select the SNS topic for notifications.
- C. Turn on auto scaling on the DynamoDB table. Configure an Amazon EventBridge rule to publish notifications to the SNS topic during scaling events.
- D. Configure the application to store logs in Amazon CloudWatch Logs. Create an Amazon CloudWatch metric filter to pattern match the THROTTLING_EXCEPTION status code from DynamoDB. Create a CloudWatch alarm for the metric. Select the SNS topic for notifications.

Answer: A

Explanation:

<https://docs.aws.amazon.com/amazondynamodb/latest/developerguide/creating-alarms.html>

NEW QUESTION # 247

A SysOps administrator configuring AWS Client VPN to connect users on a corporate network to AWS resources that are running in a VPC. According to compliance requirements, only traffic that is destined for the VPC can travel across the VPN tunnel. How should the SysOps administrator configure Client VPN to meet these requirements?

- A. On the Client VPN endpoint, specify DNS server IP addresses.
- B. Associate the Client VPN endpoint with a private subnet that has an internet route through a NAT gateway.
- **C. On the Client VPN endpoint, turn on the split-tunnel option.**
- D. Select a private certificate to use as the identity certificate for the VPN client.

Answer: C

Explanation:

Split tunnel on client, so traffic destined to resources other than VPN destination will use local internet or intranet. Otherwise

everything will go through the VPN tunnel.

<https://docs.aws.amazon.com/vpn/latest/clientvpn-admin/cvpn-working-endpoints.html#vpn-working-endpoint-create>

NEW QUESTION # 248

A company needs to implement a solution to install specific software on Amazon EC2 instances when the instances launch. Which solution will meet this requirement?

- **A. Configure AWS Systems Manager State Manager associations to bootstrap the EC2 instances with the required software at launch.**
- B. Use the Amazon CloudWatch agent to detect EC2 InstanceStart events and to inject the required software. Modify the InstanceRole IAM role to add permissions for the StartTask API operation.
- C. Use AWS Security Hub remediation actions to install the required software at launch.
- D. Use Amazon Inspector to detect EC2 launch events. Configure Amazon Inspector to install the required software as part of lifecycle hooks for the EC2 launch events.

Answer: A

Explanation:

AWS Systems Manager State Manager is a service that allows you to automate the process of keeping your EC2 instances in a defined state, including installing software at launch or on a schedule.

From the AWS Systems Manager documentation:

You can use State Manager to bootstrap instances with software, apply configurations at launch, and maintain state across your fleet.

This is the most operationally efficient way to install software during instance launch.

NEW QUESTION # 249

A SysOps administrator is designing a solution for an Amazon RDS for PostgreSQL DB instance. Database credentials must be stored and rotated monthly. The applications that connect to the DB instance send write-intensive traffic with variable client connections that sometimes increase significantly in a short period of time.

Which solution should a SysOps administrator choose to meet these requirements?

- **A. Configure AWS Secrets Manager to automatically rotate the credentials for the DB instance. Use RDS Proxy to handle the increases in database connections.**
- B. Configure AWS Key Management Service (AWS KMS) to automatically rotate the keys for the DB instance. Use RDS read replicas to handle the increases in database connections.
- C. Configure AWS Key Management Service (AWS KMS) to automatically rotate the keys for the DB instance. Use RDS Proxy to handle the increases in database connections.
- D. Configure AWS Secrets Manager to automatically rotate the credentials for the DB instance. Use RDS read replicas to handle the increases in database connections.

Answer: A

Explanation:

To meet the requirements of storing and rotating database credentials monthly and handling write-intensive traffic with variable client connections, you can use AWS Secrets Manager and Amazon RDS Proxy.

* AWS Secrets Manager for Credential Rotation:

* Open the AWS Secrets Manager console at AWS Secrets Manager Console.

* Store the database credentials as a new secret and configure automatic rotation for every 30 days.

* AWS Secrets Manager will handle the rotation process and update the secret with new credentials.

* Amazon RDS Proxy for Connection Management:

* Open the Amazon RDS console at Amazon RDS Console.

* Create an RDS Proxy for the PostgreSQL DB instance.

* Configure the proxy to handle the connection pooling and manage the connections efficiently.

* The proxy will help manage the database connections, reduce the overhead on the database, and improve performance during peak loads.

This solution ensures that database credentials are securely stored and rotated automatically while handling increased database connections effectively.

AWS Secrets Manager

Using AWS Secrets Manager to Rotate Amazon RDS Database Credentials
