RUCKUS RCNI Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Foundational Networking Concepts: This section of the exam measures the skills of RUCKUS ICX Network Administrators and covers essential networking concepts. It includes VLAN design and configuration, STP and loop prevention protocols, PoE requirements, basic LAN concepts, Layer 3 routing configurations, and basic QoS concepts. Candidates should be able to demonstrate proficiency in designing VLANs for network segmentation.
Topic 2	<ul style="list-style-type: none">ICX Solution Troubleshooting: RUCKUS ICX networking Engineers are expected to demonstrate troubleshooting skills in this section. It covers basic networking troubleshooting techniques and procedures for performing ICX switch recovery. Candidates should be able to identify and resolve common network issues in ICX environments.
Topic 3	<ul style="list-style-type: none">RUCKUS Products & Solutions: RUCKUS ICX networking Engineers are expected to showcase their knowledge of RUCKUS products and solutions in this section. It focuses primarily on the ICX product line, covering various switch models and their capabilities. Candidates should be familiar with the features, specifications, and use cases of different ICX switches.
Topic 4	<ul style="list-style-type: none">ICX Solution Implementation: This significant portion of the exam assesses the skills of RUCKUS ICX Network Administrators in implementing ICX solutions. It covers ICX software management, stacking capabilities, PoE configuration, Layer 23 protocols, and ICX services, IPv4IPv6 addressing on switch interfaces, ICX switch management methods, and configuring multicast and security features. Candidates should be able to demonstrate proficiency in configuring stacking for scalable network deployments.

RUCKUS Certified Networking Implementer Sample Questions (Q11-Q16):

NEW QUESTION # 11

Which switch cannot exceed a maximum of 30W per port?

- A. ICX7650
- B. ICX7150-C12P
- C. ICX7550
- D. ICX7150-48ZP

Answer: D

NEW QUESTION # 12

What is the maximum number of software images that can be stored simultaneously on an ICX switch?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

RUCKUS ICX switches are designed to store multiple software images simultaneously, allowing network administrators to manage firmware versions effectively. The maximum number of software images that can be stored on an ICX switch is three.

Image Storage Structure:

* Primary Image:

* The main firmware image that the switch loads during the boot process.

* Secondary Image:

* An alternative firmware image that can be used for redundancy or testing purposes.

* Tertiary (or Additional) Image:

* A third firmware image slot available for further flexibility in image management.

Managing Software Images:

* Viewing Stored Images:

* To display the software images stored on the switch, use the following command:

```
sql
```

Copy code

```
show flash
```

* This command lists all firmware images present in the switch's flash memory.

* Setting Boot Preferences:

* To specify which image the switch should load on the next reboot, use:

```
sql
```

Copy code

```
boot system flash primary
```

* Replace primary with secondary or tertiary as needed.

* Upgrading Firmware:

* When upgrading the switch firmware, you can upload the new image to any of the available slots (primary, secondary, or tertiary) without overwriting existing images, providing a fallback option if needed.

Best Practices:

* Maintain Multiple Images:

* Keeping multiple firmware images allows for quick recovery in case of issues with the current running image.

* Regular Updates:

* Ensure that the stored images are up-to-date to maintain security and feature enhancements.

* Consistent Configuration:

* After uploading a new image, verify that the switch configuration is compatible with the firmware version to prevent potential issues.
