

Authorized Valid NSK300 Test Question & Guaranteed Netskope NSK300 Exam Success with The Best New NSK300 Test Sample

NSK300

Option D : The user will be alerted and a single incident will be generated referencing the DLP-PI profile.

Correct Answer: C

Explanation/Reference:

In the given scenario, a user is attempting to upload a file containing sensitive PI and PCI data to Microsoft OneDrive. The Netskope Security Cloud provides real-time data and threat protection when accessing cloud services, websites, and private apps from anywhere, on any device. Based on the exhibit provided, different DLP (Data Loss Prevention) profiles are triggered - DLP-SourceCode, DLP-PCL and DLP-PII. Each of these profiles has specific actions associated with them; for instance, an alert is generated for Source Code while blocking actions are initiated for PCI and PII data. Since multiple DLP profiles are triggered due to the sensitive nature of the content in the file being uploaded, separate incidents will be generated for each matching profile ensuring comprehensive security coverage and incident reporting. QUESTION: 4

You are implementing a solution to deploy Netskope for machine traffic in an AWS account across multiple VPCs. You want to deploy the least amount of tunnels while providing connectivity for all VPCs. How would you accomplish this task?

Option A : Use IPsec tunnels from the AWS Virtual Private Gateway.

Option B : Use GRE tunnels from the AWS Transit Gateway.

Option C : Use GRE tunnels from the AWS Virtual Private Gateway.

Option D : Use IPsec tunnels from the AWS Transit Gateway.

Correct Answer: D

Explanation/Reference:

The best approach to deploy Netskope for machine traffic across multiple VPCs in an AWS account with the least amount of

2026 Netskope Valid NSK300 Test Question - Netskope Certified Cloud Security Architect Realistic New Test Sample 100% Pass

Actualtests4sure provides you with a free demo of Netskope NSK300 Questions so you do not have any doubts about the quality of our exam prep material. Similarly, We also provide free updates up to 365 days after purchasing Netskope Certified Cloud Security Architect dumps questions, so that you always get the latest Netskope dumps.

Netskope Certified Cloud Security Architect Sample Questions (Q16-Q21):

NEW QUESTION # 16

Users at your company's branch office in San Francisco report that their clients are connecting, but websites and SaaS applications are slow. When troubleshooting, you notice that the users are connected to a Netskope data plane in New York where your company's headquarters is located.

What is a valid reason for this behavior?

- A. The Netskope Client's DNS call to Secure Forwarder is failing
- B. The Netskope Client's on-premises detection check failed.
- **C. The closest Netskope data plane to San Francisco is unavailable.**
- D. The Netskope Client's default DNS over HTTPS call is failing.

Answer: C

Explanation:

The reported issue of slow website and SaaS application access for users in the San Francisco branch office, despite being connected to a Netskope data plane in New York, can be attributed to the geographical distance between the user location and the data plane. The Netskope Security Cloud operates through a distributed network of data planes strategically placed in various regions. When users connect to a data plane that is geographically distant, it can result in latency due to longer network traversal times. In this case, the closest Netskope data plane to San Francisco might be unavailable or experiencing high load, leading to performance issues. To address this, consider optimizing data plane selection based on proximity to the user location or investigating any data plane availability or performance issues.

NEW QUESTION # 17

You built a number of DLP profiles for different sensitive data types. If a file contains any of this sensitive data, you want to take the most restrictive policy action but also create incident details for all matching profiles.

Which statement is correct in this scenario?

- **A. Create a single Real-time Protection policy and include all of the DLP profiles; all matched profiles will show up in a single DLP incident.**
- B. Create a Real-time Protection policy for each DLP profile; each matched profile will generate a unique DLP incident.
- C. Create a single Real-time Protection policy and include all of the DLP profiles; each matched profile will generate a unique DLP incident
- D. Create a Real-time Protection policy for each DLP profile; all matched profiles will show up in a single DLP incident

Answer: A

Explanation:

When configuring a Real-time Protection policy with multiple DLP profiles, if the content matches multiple profiles, the policy

performs the most restrictive action associated with the DLP profiles that match for that policy. The resulting incident lists all the profiles that matched along with their corresponding forensic information. This means that even though the most restrictive action is taken, details for all matching profiles are created and included in a single DLP incident¹².

NEW QUESTION # 18

A recent report states that users are using non-sanctioned Cloud Storage platforms to share data. Your CISO asks you for a list of aggregated users, applications, and instance IDs to increase security posture. Which Netskope tool would be used to obtain this data?

- A. Advanced Analytics
- B. Applications in Skope IT
- C. Cloud Confidence Index (CCI)
- D. Behavior Analytics

Answer: A

Explanation:

To obtain a list of aggregated users, applications, and instance IDs, especially when dealing with non-sanctioned Cloud Storage platforms, the Advanced Analytics (A) tool within Netskope would be used. Advanced Analytics provides in-depth visibility into cloud app usage and activities. It allows security teams to create detailed reports and dashboards that can help identify risks and ensure compliance with company policies by analyzing user behavior, application access, and data movement across the organization¹.

NEW QUESTION # 19

Given the following:

```
user eq 'user@company.com' and access_method eq 'Client' and activity eq 'Download' or activity eq 'Upload' and site eq 'Amazon S3'
```

Which result does this Skope IT query provide?

- A. The query returns all events of user@company.com downloading or uploading to or from the application "Amazon S3" using the Netskope Client.
- B. The query returns all events of everyone except user@company.com downloading or uploading to or from the site "Amazon S3" using the Netskope Client.
- C. The query returns all events of user@company.com downloading or uploading to or from the site 'Amazon S3' using the Netskope Client.
- D. The query returns all events of an IP address downloading or uploading to or from Amazon S3 using the Netskope Client.

Answer: C

Explanation:

The given Skope IT query specifies the following conditions:

User equals 'user@company.com'

Access method equals 'Client'

Activity equals 'Download' or 'Upload'

Site equals 'Amazon S3'

The query combines these conditions using logical operators (AND and OR).

The result of this query will include all events where the specified user ('user@company.com') is either downloading or uploading data to or from the site 'Amazon S3' using the Netskope Client.

It does not include events related to other users or IP addresses. Reference:

NEW QUESTION # 20

What is a Fast Scan component of Netskope Threat Detection?

- A. Dynamic Analysis
- B. Static Analysis
- C. Heuristic Analysis

- **D. Machine Learning**

Answer: D

Explanation:

The Fast Scan component of Netskope Threat Detection utilizes Machine Learning to quickly detect and block malware in real-time. This is part of Netskope's multi-layered security approach, which includes various engines to defend against a wide range of threats. The Fast Scan capability specifically leverages machine learning-based detection for rapid analysis and response to potential threats¹.

The information regarding the Fast Scan component and its use of Machine Learning can be found in the Netskope documentation, which outlines the threat protection framework and the role of machine learning in detecting and blocking malware

NEW QUESTION # 21
