Trotzdem es schon zahlreiche Scrum PSPO-II Prüfungsunterlagen auf dem Markt gibt, ist die Scrum PSPO-II Prüfungssoftware von uns ZertSoft am verlässlichsten. Es wird durch Praxis schon bewiesen, dass fast alle der Prüfungsteilnehmer, die unsere Software benutzen haben, Scrum PSPO-II Prüfung bestanden. Viele davon verwenden nur Ihre Freizeit für die Vorbereitung auf Scrum PSPO-II Prüfung. Die Zertifizierung zu erwerben überrascht Sie.

Scrum Professional Scrum Product Owner II PSPO-II Prüfungsfragen mit Lösungen (Q86-Q91):

86. Frage

Which two Key Value Areas are most affected by the daily frequency a team is switching tasks or is interrupted? (choose the best two answers)

- A. All of the above.
- B. Unrealized Value.
- C. Current Value.
- **D. Time to Market.**
- **E. Ability to Innovate.**

Antwort: D,E

87. Frage

John is a new Product Owner and he invites a few stakeholders to the Product Backlog Refinement sessions. The Stakeholders instruct John on what the priorities of the Product Backlog items should be. The stakeholders at this point know more about the functional requirements of these items. Should John only prioritize the Product Backlog items based on the received stakeholder feedback?

- A. Yes
- **B. No**

Antwort: B

88. Frage

What are the most important activities that the Product Owner should do during Sprint 0? (Choose all that apply)

- A. The Product Owner can delegate her/his tasks to the Developers if she/he is stretched too thin to the works during Sprint 0
- B. All of the above
- **C. There is no such thing as Sprint 0**
- D. Work with the stakeholders to prepare requirements for the Sprint 0, ensure that the Developers have enough Product Backlog Items for the upcoming Sprints.
- E. Work with Human Resource department to allocate enough resource before starting Sprint 1

Antwort: C

89. Frage

The environment in which a product will be used changes and emerges continually. What is the effect on the Product Backlog? (choose the best answer)

- A. There is no effect, the Product Backlog must stay the same until the end of the project.
- B. The Product Backlog is archived and a new Product Backlog is created to take its place
- **C. The Product Backlog evolves to reflect what the product needs to be most valuable.**
- D. The requirements specification document, describing the Product Backlog items, must be updated to ensure stability.

Antwort: C

Begründung:

Option B is the best answer because it reflects the agile and empirical nature of Scrum and Product Ownership. The Product Backlog is a living artifact that represents the current understanding of what the product needs to be most valuable for the customers and the stakeholders¹. The Product Backlog is not a fixed or static document, but rather an emergent and dynamic one that adapts to the changing environment, needs, and feedback. The Product Owner is accountable for managing the Product Backlog and ensuring that it is transparent, ordered, and refined². The Product Owner collaborates with the Scrum Team and the stakeholders to inspect and adapt the Product Backlog items based on the new insights, opportunities, and learnings that arise from the changing environment^{3,4}. The Product Owner also uses various techniques, such as product vision, value proposition, user stories, experiments, and evidence-based management, to define, validate, and prioritize the Product Backlog items⁵.

Option A is not the best answer because it contradicts the agile and empirical nature of Scrum and Product Ownership. The Product Backlog is not a requirements specification document, but rather a list of hypotheses and assumptions that need to be tested and validated in the real world⁵. The Product Backlog items are not detailed or fixed upfront, but rather refined and clarified as they get closer to implementation². Updating the requirements specification document to ensure stability implies a plan-driven and predictive approach that does not embrace change and feedback, and that does not optimize value delivery.

Option C is not the best answer because it contradicts the agile and empirical nature of Scrum and Product Ownership. The Product Backlog is not a project plan, but rather a product roadmap that guides the development of the product. The Product Backlog does not have a predefined end date or scope, but rather evolves and changes as the product grows and matures¹. Keeping the Product Backlog the same until the end of the project implies a plan-driven and predictive approach that does not embrace change and feedback, and that does not optimize value delivery.

Option D is not the best answer because it contradicts the agile and empirical nature of Scrum and Product Ownership. The Product Backlog is not a disposable artifact, but rather a cumulative and iterative one that builds on the previous work and learnings¹. The Product Backlog items are not discarded or replaced, but rather refined and updated as the product evolves and changes².

Archiving the Product Backlog and creating a new one implies a disruptive and wasteful approach that does not leverage the existing knowledge and feedback, and that does not optimize value delivery.
