Free JN0-232 Pdf Guide | JN0-232 Latest Exam Test

We promise you that if you fail to pass your exam after using JN0-232 exam materials, we will give you refund. We are pass guarantee and money back guarantee. Moreover, JN0-232 training materials cover most of knowledge points for the exam, and you can master the major knowledge points as well as improve your professional ability after practicing. JN0-232 Exam Materials contain both questions and answers, and it's convenient for you to have a quickly check after practicing. We also have online and offline chat service, if you have any questions about JN0-232 exam dumps, you can consult us.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q87-Q92):

NEW QUESTION # 87

Which Web filtering solution uses a direct Internet-based service for URL categorization?

- A. Juniper ATP Cloud
- B. Websense Redirect
- C. local blocklist
- **D. Juniper Enhanced Web Filtering**

Answer: D

Explanation:

Juniper Enhanced Web Filtering is a web filtering solution that uses a direct Internet-based service for URL categorization. This service allows Enhanced Web Filtering to quickly and accurately categorize URLs and other web content, providing real-time protection against malicious content. Additionally, Enhanced Web Filtering is able to provide detailed reporting on web usage, as well as the ability to define and enforce acceptable use policies.

NEW QUESTION # 88

Your company is adding IP cameras to your facility to increase physical security. You are asked to help protect these IoT devices from becoming zombies in a DDoS attack. Which Juniper ATP feature should you configure to accomplish this task?

- A. allowlists
- **B. C&C feeds**
- C. static NAT
- D. IPsec

Answer: B

Explanation:

Juniper ATP should be configured with C&C feeds that contain lists of malicious domains and IP addresses in order to prevent IP cameras from becoming zombies in a DDoS attack. This is an important step to ensure that the IP cameras are protected from malicious requests - and thus, they will not be able to be used in any DDoS attacks against the facility.

NEW QUESTION # 89

What must also be enabled when using source NAT if the address pool is in the same subnet as the interface?

- A. dynamic DNS
- B. destination NAT
- **C. proxy ARP**
- D. static NAT

Answer: C

Explanation:

When the source NAT address pool belongs to the same subnet as the egress interface, the SRX must respond to ARP requests for those translated IPs. Enabling proxy ARP allows the firewall to reply on behalf of those NAT pool addresses, ensuring proper packet delivery.

NEW QUESTION # 90

You are troubleshooting first path traffic not passing through an SRX Series Firewall. You have determined that the traffic is ingressing and egressing the correct interfaces using a route lookup.

In this scenario, what is the next step in troubleshooting why the device may be dropping the traffic?

- **A. Verify that the interfaces are in the correct security zones.**
- B. Verify that source NAT is occurring.
- C. Verify the routing protocol being used.
- D. Verify that the correct ALG is being used.

Answer: A

Explanation:

After confirming correct routing:

* The next step is to verify security zone assignments (Option A). If interfaces are not correctly assigned to zones, traffic will not be evaluated against proper inter-zone or intra-zone security policies, causing drops.
* Option B: The routing protocol is irrelevant once the correct route lookup is confirmed.
* Option C: NAT is checked later in the flow, not the immediate next step after routing.
* Option D: ALG is only needed for specific applications (FTP, SIP), not general troubleshooting.
Correct Next Step: Verify that interfaces are assigned to the correct security zones.

NEW QUESTION # 91

Which two statements are correct about a Juniper Packet Forwarding Engine? (Choose two.)

- A. The Packet Forwarding Engine creates the routing and switching tables.
- **B. The Packet Forwarding Engine is managed by the Routing Engine.**
- **C. The Packet Forwarding Engine is responsible for forwarding transit traffic.**
- D. The Packet Forwarding Engine manages the Routing Engine.

Answer: B,C

Explanation:

The Packet Forwarding Engine (PFE) is responsible for forwarding transit traffic, meaning it handles the actual packet processing and forwarding based on decisions made by the control plane.

The Routing Engine (RE) manages the PFE by installing forwarding tables and controlling its operation, while the PFE executes those forwarding instructions at high speed.

NEW QUESTION # 92

.....

It is our biggest goal to try to get every candidate through the exam. Although the passing rate of our JN0-232 simulating exam is nearly 100%, we can refund money in full if you are still worried that you may not pass the JN0-232 exam. You don't need to worry about the complexity of the refund process at all, we've made it quite simple. And if you really want to pass the exam instead of refund, you can wait for our updates for we will update our JN0-232 Study Guide for sure to make you pass the exam.

Free JN0-232 Pdf Guide: https://www.dumpkiller.com/JN0-232_braindumps.html

The JN0-232 test braindumps: Security, Associate (JNCIA-SEC) is the important exam product which is valid for most candidates who are eager to prepare and pass exam.
