Reliable D-PWF-OE-00 Test Blueprint | Study D-PWF-OE-00 Center

For a long time, high quality is our D-PWF-OE-00 exam torrent constantly attract students to participate in the use of important factors, only the guarantee of high quality, to provide students with a better teaching method, and at the same time the D-PWF-OE-00 practice materials bring more outstanding teaching effect. And with the three different versions of our D-PWF-OE-00 Exam Questions on the web, so high-quality D-PWF-OE-00 learning guide help the students know how to choose suitable for their own learning method, our D-PWF-OE-00 study materials are a very good option for you to pass the exam.

EMC D-PWF-OE-00 Exam Syllabus Topics:

Topic	Details
Topic 1	• PowerFlex Security: This section addresses security administration through managing user accounts and access privileges, integrating CloudLink for encryption, and configuring system alerting.
Topic 2	• PowerFlex Components and Resource Discovery: This domain covers identifying PowerFlex hardware models and software components, using management interfaces to interact with the system, and completing essential post-installation configuration tasks.
Topic 3	• PowerFlex Upgrades: This domain covers understanding upgrade procedures and executing cluster upgrades to newer software versions.

EMC Dell PowerFlex Operate Exam Sample Questions (Q74-Q79):

NEW QUESTION # 74
What actions can administrators perform to manage PowerFlex shared file systems? (Choose two).

- A. Enable data access for multiple nodes
- B. Configure snapshots for shared file systems
- C. Assign file systems to fault sets
- D. Deduplicate shared file system data

Answer: A,B

Explanation:
PowerFlex File (NAS) extends the block capabilities to support file-level access.
* Enable data access for multiple nodes (Option B): The fundamental purpose of a shared file system (NAS) is to allow multiple clients (Linux via NFS, Windows via SMB) to access the same dataset simultaneously over the network. PowerFlex File manages the exports and shares that facilitate this concurrency.
* Configure snapshots for shared file systems (Option C): Just like block volumes, PowerFlex File systems support snapshots. These file-system level snapshots allow users to recover deleted files or administrators to roll back the entire file system to a previous point in time.
Incorrect Options:
* Assign file systems to fault sets (A): Fault Sets are a block-layer construct for physical SDS nodes. File systems are logical entities that reside on the storage provided by the block layer; they are not directly assigned to Fault Sets.
* Deduplicate shared file system data (D): Deduplication occurs at the underlying Storage Pool level (inline), not as a management action performed on a specific file system.

NEW QUESTION # 75
What is the benefit of enabling deduplication in PowerFlex storage?

- A. Reduces data redundancy and capacity footprint
- B. Ensures fault tolerance
- C. Enhances data replication speed
- D. Increases node discovery rates

Answer: A

Explanation:
Deduplication (often paired with compression) is an efficiency feature available in PowerFlex Fine Granularity (FG) storage pools.
* Reduces data redundancy (Option A): The primary purpose of inline deduplication is to identify repeated data patterns (blocks) as they are written to the system. Instead of writing the same 4KB block of zeroes or identical OS files multiple times, PowerFlex writes it once and creates pointers for subsequent writes. This significantly reduces the physical storage capacity required to store data, particularly in VDI (Virtual Desktop Infrastructure) or virtualized server environments where many VMs share similar OS files.
Note: Deduplication is a trade-off; it saves space but requires more CPU/RAM overhead on the Storage Data Servers (SDS).

NEW QUESTION # 76
CloudLink integration in PowerFlex provides encryption for data in transit. True. False.

- A. True
- B. False

Answer: A,B

Explanation:

* False: CloudLink is primarily a Data at Rest Encryption (D@RE) and Key Management solution.
* Detail: CloudLink integrates with PowerFlex to manage the keys for Self-Encrypting Drives (SEDs) or software-based encryption (SDRE). This protects data if a physical drive is stolen from the datacenter.
* Data in Transit: Encryption of data "in flight" (between SDC and SDS, or SDS and SDS) is handled by the PowerFlex native Secure Data Transfer (SDT) protocol (introduced in v4.0) or external network encryption (IPsec/VPN). While CloudLink might manage the keys for SDT in newer versions, the core definition of the CloudLink integration feature in PowerFlex exams historically refers to D@RE.

NEW QUESTION # 77
What is the primary purpose of snapshots in PowerFlex?

* A. Improve storage performance metrics
* B. Enable point-in-time data recovery
* C. Reduce storage redundancy
* D. Automate data replication between clusters

Answer: B

Explanation:
* Enable point-in-time data recovery (Option B): A snapshot freezes the state of a volume at a specific second. If data is subsequently corrupted, deleted, or encrypted by ransomware, the administrator can use the snapshot to restore the data exactly as it was at that "point in time," minimizing data loss.

NEW QUESTION # 78
What are the benefits of using snapshots in PowerFlex? (Choose two).

* A. Reduce fault tolerance across clusters
* B. Create a point-in-time copy of data
* C. Enable quick data recovery
* D. Minimize storage capacity usage

Answer: B,C

Explanation:
* Enable quick data recovery (Option A): Snapshots provide a "rewind" button. If a database is corrupted or a file is accidentally deleted at 2:00 PM, an administrator can instantly restore the volume to the state captured in the 1:00 PM snapshot.
* Create a point-in-time copy of data (Option D): This is the definition of a snapshot. It freezes the view of the data at a specific second. This is crucial for backups (backup software backs up the static snapshot while the production application continues to write to the live volume) or for creating test/dev clones of production data.
