That is the reason Actual4Exams has compiled a triple-formatted C_S4TM_2023 exam study material that fulfills almost all of your preparation needs. The SAP C_S4TM_2023 Practice Test is compiled under the supervision of 90,000 SAP professionals that assure the passing of the SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management (C_S4TM_2023) exam on your first attempt.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q43-Q48):

NEW QUESTION # 43

You are implementing a side-by-side scenario integrating sales orders and outbound deliveries to transportation management. Sales order integration has created 30 freight units for 1 sales order (1 freight unit per sales order item). During planning, the freight units were assigned to 3 trucks (10 freight units per truck).

Based on this planning result, delivery creation is triggered. During packaging, up to 3 items can be packed into 1 case. What is the minimum number of freight units that exist in transportation management at the end of this process?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

In a side-by-side scenario integrating SAP S/4HANA Transportation Management with sales orders and outbound deliveries, the process is as follows:

- * Initially, 30 freight units are created from one sales order (1 freight unit per item).
- * During planning, these are assigned to 3 trucks (10 freight units per truck).
- * Delivery creation is triggered based on the planning result, and during packaging, up to 3 items can be packed into 1 case. Since each freight unit corresponds to one sales order item, 3 items per case means 3 freight units can be consolidated into 1 freight unit (representing the case).

With 30 freight units, consolidating 3 freight units per case results in:

- * $30 / 3 = 10$ freight units (each representing one case).

Thus, the minimum number of freight units in transportation management after packaging is 10. According to the SAP documentation, freight units can be consolidated during the packaging process in integration scenarios, reducing the number of freight units while maintaining the planning result (assignment to trucks).

The other options are incorrect:

- * A (12) and D (6) do not align with the consolidation math ($30 / 3 = 10$).
- * C (3) assumes one freight unit per truck, which ignores the packaging consolidation.
