

Top Nutanix NCP-DB-6.10 Valid Exam Vce & Authoritative PracticeVCE - Leading Offer in Qualification Exams

Nutanix Database Automation 6.10 (NCP-DB-6.10) Exam Questions

P.S. Free & New NCP-DB-6.10 dumps are available on Google Drive shared by PracticeVCE: <https://drive.google.com/open?id=1vnElkbdvXyG55giGulgIoxje8hGo2PYO>

Our NCP-DB-6.10 exam dumps strive for providing you a comfortable study platform and continuously explore more functions to meet every customer's requirements. We may foresee the prosperous talent market with more and more workers attempting to reach a high level through the Nutanix certification. To deliver on the commitments of our NCP-DB-6.10 Test Prep that we have made for the majority of candidates, we prioritize the research and development of our NCP-DB-6.10 test braindumps, establishing action plans with clear goals of helping them get the Nutanix certification.

Generally speaking, preparing for the NCP-DB-6.10 exam is a very hard and even some suffering process. Because time is limited, sometimes we have to spare time to do other things to review the exam content, which makes the preparation process full of pressure and anxiety. But from the point of view of customers, our NCP-DB-6.10 Study Materials will not let you suffer from this. As mentioned above, our NCP-DB-6.10 study materials have been carefully written, each topic is the essence of the content. Only should you spend about 20 - 30 hours to study NCP-DB-6.10 study materials carefully can you take the exam.

Reliable NCP-DB-6.10 Exam Materials, NCP-DB-6.10 Latest Test Camp

Are you looking for the best study materials for the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 exam? PracticeVCE is the only place to go! You may be fully prepared to pass the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) test with their comprehensive Nutanix NCP-DB-6.10 exam questions. PracticeVCE provides the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) Exam Questions and answers guide in PDF format, making it simple to download and use on any device. You can study at your own pace and convenience with the Nutanix NCP-DB-6.10 PDF Questions, without having to attend any in-person seminars. This means you may study for the NCP-DB-6.10 exam from the comfort of your own home whenever you want.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q253-Q258):

NEW QUESTION # 253

An administrator created an NDB managed VLAN called PGSQLVLAN40 After deploying PostgreSQL HA, it was noticed that the databases were able to communicate with everything on VLAN 40 only. What can the administrator do to fix the current issue and going forward?

- A. Delete the data base servers, VLAN name PGSQLVLAN40 and redeploy the same information under a different VLAN name.
- B. Change the Default Gateway on the PostgreSQL servers and update NDB for VLAN PGSQLVLAN40.
- C. Engage the networking team as this is a network related issue.

- D. Use VLAN 1 for the PostgreSQL deployment.

Answer: C

Explanation:

The scenario describes a PostgreSQL HA deployment managed by NDB, where an NDB- managed VLAN (PGSQLVLAN40) restricts database communication to only within VLAN 40. This indicates a network isolation issue, likely due to VLAN segmentation or routing misconfiguration, preventing communication with external networks or other VLANs. Since NDB manages the VLAN and assigns it to the database VMs, the issue lies beyond NDB's direct control and involves the underlying network infrastructure (e.g., switches, routers, or Prism Element network settings).

NEW QUESTION # 254

How is a software profile created?

- A. In the Ere IJI select Profiles Software, and then a database engine, OS version, and database version,
- B. In the Ere IJI select Profiles Software, and then a template VM.
- C. Create a software profile from a registered Database Server VM.
- D. Clone a software profile provided by Era and modify as needed.

Answer: A

Explanation:

Nutanix Database Automation (NCP-DB) simplifies database provisioning using predefined profiles customized to your environment. Software profiles, which are templates of the OS and database engine, allow you to maintain consistent software versions. You then use additional profiles to customize that deployment.

NEW QUESTION # 255

What must be configured in Prism Element to allow the NDB server and CVMs to facilitate iSCSI connections?

- A. Backplane IP
- B. Data Services IP
- C. Virtual IP
- D. Secondary DNS IP

Answer: B

Explanation:

To enable iSCSI connections between the Nutanix Database Service (NDB) server, Controller VMs (CVMs), and Prism Element, a Data Services IP must be configured in Prism Element. The Data Services IP acts as a cluster-wide address that facilitates iSCSI target discovery and connectivity. It is used by Nutanix Volumes (a block storage service) to present storage to external clients or services, such as the NDB server, via the iSCSI protocol. This IP ensures that iSCSI traffic is routed correctly and remains available even if a CVM fails, as ownership of the Data Services IP can move to another CVM in the cluster.

NEW QUESTION # 256

An administrator needs to register a Nutanix cluster with NDB. Which condition requires the administrator to create a manual storage mapping between the remote container and NDB provisioning container?

- A. DB VMs are stored in the NDB Server or NDB Provisioning container.
- B. Nutanix Database Service High Availability is enabled on the cluster.
- C. Disaster Recovery Network Segmentation is enabled on the cluster.
- D. NDB Server container and NDB Provisioning container are separate.

Answer: D

Explanation:

When registering a Nutanix cluster with NDB, a manual storage mapping between the remote container and the NDB provisioning container is required if the NDB Server container and NDB Provisioning container are separate. This separation occurs when the storage containers used by the NDB server (for its own operations) and the provisioning container (for database VMs) are distinct,

either due to multi-cluster setups or custom configurations. Manual mapping ensures NDB can correctly allocate storage resources and manage database provisioning across these containers.

NEW QUESTION # 257

Which default roles are available within Era for Role-Based Access Control?

- A. Super Admin
Database Admin
Database Infrastructure Admin
Infrastructure Admin
- B. Super Admin
Database Admin
Database Infrastructure Admin
prism Infrastructure Admin
- C. Era Oracle Admin
Era SQLServer Admin
Era PostgreSQL Admin
Era Mariadb Admin
- D. prism Admin
Era Super Admin
Era Database Admin
Era Infrastructure Admin

Answer: D

Explanation:

Nutanix Era offers Role-Based Access Control capabilities by organically embedding them in the product. It provides the ability to add and remove users from Era, create and assign roles to users, and associate various privileges with a role. The default roles available within Era for Role- Based Access Control are:

prism Admin
Era Super Admin
Era Database Admin
Era Infrastructure Admin

These roles allow for the management of both physical resources like IP addresses and VLANs along with database entities like databases, time-machines, clones, and so on.

NEW QUESTION # 258

.....

Our NCP-DB-6.10 study materials are compiled and verified by the first-rate experts in the industry domestically and they are linked closely with the real exam. Our products' contents cover the entire syllabus of the exam and refer to the past years' exam papers. Our test bank provides all the questions which may appear in the real exam and all the important information about the exam. You can use the practice test software to test whether you have mastered the NCP-DB-6.10 Study Materials and the function of stimulating the exam to be familiar with the real exam's pace, atmosphere and environment. So our NCP-DB-6.10 study materials are real-exam-based and convenient for the clients to prepare for the exam.
