Pass 300-715 Exam with Cisco's Exam Questions and Achieve 100% Success

on Your First Try

There are many users who worry that if they fail to pass the exam after purchasing our 300-715 latest exam torrents, the money will be wasted, and the cost of the test seems too great to be worth. The 300-715 exam questions in order to let users do not have such concerns, solemnly promise all users who purchase the 300-715 latest exam torrents, the user after failed in the exam as long as to provide the corresponding certificate and failure scores scanning or screenshots of 300-715 Exam, we immediately give money refund to the user, and the process is simple, does not require users to wait too long a time. Of course, if you have any other questions, users can contact the customer service of 300-715 test torrent online at any time, they will solve questions as soon as possible for the users, let users enjoy the high quality and efficiency refund services.

To pass the Cisco 300-715 exam, candidates need to have a solid understanding of the fundamentals of network security and identity management, as well as hands-on experience with configuring and managing Cisco ISE solutions. 300-715 exam consists of 60-70 questions and lasts for 90 minutes, and candidates can take it online or at a Pearson VUE testing center. Earning the Cisco 300-715 Certification demonstrates to employers and peers that a professional has the skills and knowledge needed to implement and manage secure network access using Cisco ISE solutions.

Cisco Implementing and Configuring Cisco Identity Services Engine Sample Questions (Q130-Q135):

NEW QUESTION # 130
A customer wants to set up the Sponsor portal and delegate the authentication flow to a third party for added security while using Kerberos Which database should be used to accomplish this goal?

- A. LDAP
- B. RSA Token Server
- C. Active Directory
- D. Local Database

Answer: C

Explanation:
Explanation
https://www.cisco.com/c/en/us/td/docs/security/ise/2-6/admin_guide/b_ise_admin_guide_26/b_ise_admin_guide

NEW QUESTION # 131
Which component of the 802.1X authentication process provides the identity credentials and communicates using EAP at Layer 2?

- A. authenticator
- B. supplicant
- C. authentication database
- D. authentication server

Answer: B

NEW QUESTION # 132
An engineer is configuring a posture policy for Windows 10 endpoints and wants to ensure that users in each AD group have different conditions to meet to be compliant.
What must be done to accomplish this task?

- A. Use the authorization policy within the policy set to group each AD group with their respective posture policy
- B. identify The users groups needed for different policies and create service conditions to map each one to its posture requirement
- C. Change the posture requirements to use an AD group for each use case then use those requirements in the posture policy
- D. Configure a simple condition for each AD group and use it in the posture policy for each use case

Answer: A

NEW QUESTION # 133
An administrator must provide administrative access to the helpdesk users on production Cisco IOS routers. The solution must meet these requirements:
- Authenticate the users against Microsoft AD.
- Validate IOS commands run by users.
These configurations have been performed:
- joined Cisco ISE to AD
- retrieved AD groups
- added a router to Cisco ISE
- enabled Device Admin Service in Cisco ISE
- configured an authorization policy
- configured the routers for authentication and authorization
Which two components must be configured? (Choose two.)

- A. TACACS profile
- B. access control list to filter the IOS commands
- C. authentication profile
- D. TACACS command sets
- E. authorization profile

Answer: A,D

NEW QUESTION # 134
Which two default endpoint identity groups does Cisco ISE create? (Choose two)

- A. block list
- B. unknown
- C. endpoint
- D. allow list
- E. profiled

Answer: B,E

Explanation:
Reference:
https://www.cisco.com/c/en/us/td/docs/security/ise/2-
1/admin_guide/b_ise_admin_guide_21/b_ise_admin_guide_20_chapter_010100.html Default Endpoint Identity Groups Created for Endpoints Cisco ISE creates the following five endpoint identity groups by default: Blacklist, GuestEndpoints, Profiled, RegisteredDevices, and Unknown. In addition, it creates two more identity groups, such as Cisco-IP-Phone and Workstation, which are associated to the Profiled (parent) identity group. A parent group is the default identity group that exists in the system. Cisco ISE creates the following endpoint identity groups:
Blacklist-This endpoint identity group includes endpoints that are statically assigned to this group in Cisco ISE and endpoints that are block listed in the device registration portal. An authorization profile can be defined in Cisco ISE to permit, or deny network access to endpoints in this group.
GuestEndpoints-This endpoint identity group includes endpoints that are used by guest users.
Profiled-This endpoint identity group includes endpoints that match endpoint profiling policies except Cisco IP phones and workstations in Cisco ISE.
RegisteredDevices-This endpoint identity group includes endpoints, which are registered devices that are added by an employee through the devices registration portal. The profiling service continues to profile these devices normally when they are assigned to this group. Endpoints are statically assigned to this group in Cisco ISE, and the profiling service cannot reassign them to any other identity group. These devices will appear like any other endpoint in the endpoints list. You can edit, delete, and block these devices that you added through the device registration portal from the endpoints list in the Endpoints page in Cisco ISE. Devices that you have blocked in the device registration portal are assigned to the Blacklist endpoint identity group, and an authorization profile that exists in Cisco ISE redirects blocked devices to a URL, which displays "Unauthorised Network Access", a default portal page to the blocked devices.
Unknown-This endpoint identity group includes endpoints that do not match any profile in Cisco ISE.
In addition to the above system created endpoint identity groups, Cisco ISE creates the following endpoint identity groups, which are associated to the Profiled identity group:
Cisco-IP-Phone-An identity group that contains all the profiled Cisco IP phones on your network.
Workstation-An identity group that contains all the profiled workstations on your network.
