Believe that users will get the most satisfactory answer after consultation on our NCP-EUC exam questions. Our online service staff is professionally trained, and users' needs about NCP-EUC test guide can be clearly understood by them. The most complete online service of our company will be answered by you, whether it is before the purchase of NCP-EUC training guide or the installation process, or after using the NCP-EUC latest questions, no matter what problem the user has encountered. We will give you the best service and suggestion on the NCP-EUC study material.

Nutanix Certified Professional - End-User Computing (NCP-EUC) exam is a comprehensive certification exam designed to test the knowledge and skills of IT professionals in the area of end-user computing. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification is offered by Nutanix, a leading provider of hyperconverged infrastructure solutions. The NCP-EUC exam is intended for IT professionals who specialize in the deployment, management, and maintenance of Nutanix end-user computing solutions.

Nutanix NCP-EUC (Nutanix Certified Professional - End-User Computing) Certification Exam is a highly respected certification in the field of end-user computing. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification is designed to validate the skills and knowledge required to deploy, manage, and support Nutanix infrastructure for end-user computing solutions. NCP-EUC Exam includes a range of topics, such as desktop and application virtualization, end-user management, and endpoint security.

Nutanix NCP-EUC (Nutanix Certified Professional - End-User Computing) certification exam is designed to test the skills and knowledge of IT professionals who specialize in end-user computing. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification is intended for professionals who want to validate their expertise in designing, deploying, and managing Nutanix end-user computing solutions. The NCP-EUC certification exam is one of the most in-demand certifications in the IT industry, as it recognizes the proficiency of professionals in the field of end-user computing.

The only goal of all experts and professors in our company is to design the best and suitable study materials for all people. According to the different demands of many customers, they have designed the three different versions of the NCP-EUC Study Materials for all customers. They sincerely hope that all people who use the NCP-EUC study materials from our company can pass the exam and get the related certification successfully.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q96-Q101):

NEW QUESTION # 96

By default, Prism Central provides 18 predefined system report configurations that address common use cases and requirements of an organization's infrastructure management.

What is a valid action for predefined report configurations?

- A. Edit
- **B. Schedule**
- C. Delete
- D. Export

Answer: B

Explanation:

According to the Prism Central Guide regarding Reporting, predefined system reports (such as Cluster Efficiency, Environment Summary, etc.) are built-in templates provided by Nutanix. The documentation explicitly states that while administrators can view and run these reports, they cannot delete or modify (Edit) the structure of these predefined reports directly.

However, the valid action an administrator can perform on a predefined report is to Schedule it. Scheduling allows the report to run automatically at specified intervals and email the results to recipients. If modification is required, the administrator must first clone the predefined report to create a custom copy, which can then be edited; the original remains locked.

NEW QUESTION # 97

An administrator is using Citrix Studio to configure policies for their existing CVAD environment on to a Nutanix Files share. The administrator would like to use Citrix Director to reset user profiles.

How should the user profiles be configured?

- **A. use Nutanix Files distributed shares. Deploy Citrix Profile Management user stores inside the user's top-level directory.**
- B. Redirect user's Desktop, Documents and Favorites to a Nutanix Files general share.
- C. Redirect user's Desktop, Documents and Favorites to a Nutanix Files home share.
- D. use Nutanix Files standard shares
Deploy Citrix Profile Management user stores inside the user's top-level directory

Answer: A

Explanation:

This is because this option will allow the administrator to use Citrix Director to reset user profiles on a Nutanix Files share that provides high performance, scalability, and resilience³.

Citrix Profile Management is a solution that allows administrators to manage user profiles and settings across different devices and sessions¹². Nutanix Files is a software-defined file storage solution that provides high performance and scalability for file data¹².

Nutanix Files supports all forms of profile management with efficient metadata caching techniques that optimize for faster VDI logon times¹². Nutanix Files offers two types of shares: standard shares and distributed shares³. Standard shares are hosted on a single file server, while distributed shares are hosted on multiple file servers for load balancing and high availability³.

NEW QUESTION # 98

A company is using Citrix for virtual desktops on Nutanix with AHV. The studio has 10,000 users who will be connecting to this infrastructure and have deployed a dedicated Files cluster for holding the user home shares.

Since this is a dedicated cluster with dual Intel 6242 28 GHz 16 Core processors and 192GB of RAM, what should be done for the FSVM and CVM configuration to allow for optimal performance?

- A. Leave the CVM vCPUs at 12 and increase the FSVM vCPUs to 8,
- **B. Leave the CVM RAM at 32GB and increase the FSVM RAM to 96GB.**
- C. Increase the CVM RAM to 64GB and the FSVM RAM to 96GB.
- D. Increase the CVM vCPUs to 16 and the FSVM vCPUs to 12.

Answer: B

Explanation:

<https://portal.nutanix.com/page/documents/solutions/details?targetId=TN-2041-Nutanix-Files:file-server-virtual-machines.html>

<https://next.nutanix.com/files-storage-71/command-line-access-to-nutanix-file-server-vm-fsvm-via-ssh-nutanix-files-33420> The file server VM (FSVM) is a virtual machine that runs on Nutanix Files and provides file services such as SMB shares and NFS exports. The FSVM is based on CentOS and incorporates all the security and hardening that goes into the Nutanix Controller VM (CVM)². The CVM is a virtual machine that runs on each node of a Nutanix cluster and provides storage management, data protection, cluster coordination, and other services³.

The FSVMs have some default configuration settings that can be changed depending on your workload requirements. For example, you can change the number of vCPUs, RAM, network interfaces, or disk size of an FSVM². However, you should not change these settings without consulting Nutanix Support first.

One of the factors that affects the performance of an FSVM is its memory allocation. The more memory an FSVM has, the more cache it can use for file operations. This can improve the throughput and latency of file serving workloads⁴. Therefore, increasing the FSVM RAM to 96GB can help optimize its performance for a large number of users.

NEW QUESTION # 99

An administrator is deploying a VDI solution with non-persistent desktops. Management wants to allow users to maintain a personalized desktop environment while maintaining a fast and consistent sign-in experience. What should the administrator do to meet this requirement?

- A. Deploy a files distributed share for profiles
- **B. Implement container-based profiles**
- C. Utilize roaming profiles
- D. Configure local profiles

Answer: B

Explanation:

For non-persistent VDI environments where speed and personalization are required, Container-based profiles (such as FSLogix Profile Containers or Citrix Profile Management containers) are the industry standard and Nutanix recommended solution.

Unlike Roaming Profiles (Option D), which must copy thousands of files over the network at login (causing slow logins and "bloat"), Container-based profiles encapsulate the entire user profile into a single virtual disk (VHD/VHDX). This disk is mounted instantly over the network when the user logs in. This provides the user with their personalized settings immediately-mimicking a local profile-without the performance penalty of file copying, ensuring the fast and consistent sign-in experience requested by management.

NEW QUESTION # 100

An administrator has finished setting up a Frame environment and has to finish preparing the Sandbox image. During the publishing and testing phase, the administrator notices issue with the Sysprep process.

Which tool can the administrator use to prepare the Sysprep of the sandbox with error parsing?

- A. Frame Guest Agent 8
- B. Windows Sysprep Built in tool
- **C. Frame Sysprep Helper Tool**
- D. Frame Guest Agent 7

Answer: C

Explanation:

Sysprep is a Microsoft tool that prepares a Windows installation for cloning, auditing, and customer delivery²³. The Frame Sysprep Helper Tool is designed to simplify the Microsoft Sysprep process by parsing errors reported by sysprep and immediately repairing them when possible¹. Therefore, the tool that the administrator can use to prepare the Sysprep of the sandbox with error parsing is A (Frame Sysprep Helper Tool).

NEW QUESTION # 101

.....

After successful competition of the Nutanix NCP-EUC certification, the certified candidates can put their career on the right track and achieve their professional career objectives in a short time period. For the recognition of skills and knowledge, more career opportunities, professional development, and higher salary potential, the Nutanix NCP-EUC Certification Exam is the proven way to achieve these tasks quickly.
