Associate-Cloud-Engineer Latest Exam Cram & Associate-Cloud-Engineer Valid Exam Book

The Associate-Cloud-Engineer study material provided by ActualTestsIT can make you enjoy a boost up in your career and help you get the Associate-Cloud-Engineer certification easily. The 99% pass rate can ensure you get high scores in the actual test. In

order to benefit more candidates, we often give some promotion about our Associate-Cloud-Engineer Pdf Files. You will get the most valid and best useful Associate-Cloud-Engineer study material with a reasonable price. Besides, you will enjoy the money refund policy in case of failure.

Google Associate Cloud Engineer Exam Sample Questions (Q292-Q297):

NEW QUESTION # 292

You are using Data Studio to visualize a table from your data warehouse that is built on top of BigQuery. Data is appended to the data warehouse during the day. At night, the daily summary is recalculated by overwriting the table. You just noticed that the charts in Data Studio are broken, and you want to analyze the problem. What should you do?

- A. Review the Error Reporting page in the Cloud Console to find any errors.
- B. Use the BigQuery interface to review the nightly Job and look for any errors
- C. Use Cloud Debugger to find out why the data was not refreshed correctly
- D. In Cloud Logging create a filter for your Data Studio report

Answer: C

NEW QUESTION # 293

You have one GCP account running in your default region and zone and another account running in a non- default region and zone. You want to start a new Compute Engine instance in these two Google Cloud Platform accounts using the command line interface. What should you do?

- A. Create two configurations using `gcloud config configurations create [NAME]`. Run `gcloud config configurations activate [NAME]` to switch between accounts when running the commands to start the Compute Engine instances.
- B. Activate two configurations using `gcloud configurations activate [NAME]`. Run `gcloud config list` to start the Compute Engine instances.
- C. Activate two configurations using `gcloud configurations activate [NAME]`. Run `gcloud configurations list` to start the Compute Engine instances.
- D. Create two configurations using `gcloud config configurations create [NAME]`. Run `gcloud configurations list` to start the Compute Engine instances.

Answer: A

Explanation:

"Run `gcloud configurations list` to start the Compute Engine instances". How the heck are you expecting to "start" GCE instances doing "configuration list".

Each `gcloud` configuration has a 1 to 1 relationship with the region (if a region is defined). Since we have two different regions, we would need to create two separate configurations using `gcloud config configurations createRef`:

<https://cloud.google.com/sdk/gcloud/reference/config/configurations/create> Secondly, you can activate each configuration

independently by running `gcloud config configurations activate`

`[NAME]`Ref: <https://cloud.google.com/sdk/gcloud/reference/config/configurations/activate> Finally, while each configuration is active, you can run the `gcloud compute instances start [NAME]` command to start the instance in the configurations

region.<https://cloud.google.com/sdk/gcloud/reference/compute/instances/start>

NEW QUESTION # 294

You need to grant access for three users so that they can view and edit table data on a Cloud Spanner instance. What should you do?

- A. Run `gcloud iam roles describe roles/spanner.databaseUser`. Add the users to the role.
- B. Run `gcloud iam roles describe roles/spanner.databaseUser`. Add the users to a new group. Add the group to the role.
- C. Run `gcloud iam roles describe roles/spanner.viewer` - `-project my-project`. Add the users to a new group. Add the group to the role.
- D. Run `gcloud iam roles describe roles/spanner.viewer` - `-project my-project`. Add the users to the role.

Answer: A

NEW QUESTION # 295

You want to deploy a new containerized application into Google Cloud by using a Kubernetes manifest. You want to have full control over the Kubernetes deployment, and at the same time, you want to minimize configuring infrastructure. What should you do?

- A. Deploy the application on GKE Standard.
- **B. Deploy the application on GKE Autopilot.**
- C. Deploy the application on Cloud Functions.
- D. Deploy the application on Cloud Run.

Answer: B

NEW QUESTION # 296

You are the team lead of a group of 10 developers. You provided each developer with an individual Google Cloud Project that they can use as their personal sandbox to experiment with different Google Cloud solutions. You want to be notified if any of the developers are spending above \$500 per month on their sandbox environment. What should you do?

- A. Create a separate billing account per sandbox project and enable BigQuery billing exports. Create a Data Studio dashboard to plot the spending per billing account.
- **B. Create a budget per project and configure budget alerts on all of these budgets.**
- C. Create a single budget for all projects and configure budget alerts on this budget.
- D. Create a single billing account for all sandbox projects and enable BigQuery billing exports. Create a Data Studio dashboard to plot the spending per project.

Answer: B

Explanation:

Key is anyone goes above \$500 means it requires project level.
