

100% Pass Quiz 2026 Microsoft Fantastic DP-600: Implementing Analytics Solutions Using Microsoft Fabric Best Study Material

BONUS!!! Download part of PracticeDump DP-600 dumps for free: <https://drive.google.com/open?id=1mtrBr0o4yJANgTgY8XOnoAjKD5LRRmrS>

PracticeDump is the website that has been known to learn IT technology. PracticeDump gets high praise from our customers in real test questions and answers. It is the real website that can help you to pass Microsoft DP-600 certificate. Why is PracticeDump very popular? Because PracticeDump has a group of IT elite which is committed to provide you with the best test questions and test answers. Therefore, PracticeDump will provide you with more and better certification training materials to satisfy your need.

Microsoft DP-600 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Implement and manage semantic models: This section of the exam measures the skills of architects and focuses on designing and optimizing semantic models to support enterprise-scale analytics. It evaluates understanding of storage modes and implementing star schemas and complex relationships, such as bridge tables and many-to-many joins. Architects must write DAX-based calculations using variables, iterators, and filtering techniques. The use of calculation groups, dynamic format strings, and field parameters is included. The section also includes configuring large semantic models and designing composite models. For optimization, candidates are expected to improve report visual and DAX performance, configure Direct Lake behaviors, and implement incremental refresh strategies effectively.

Topic 2	<ul style="list-style-type: none"> • Prepare data: This section of the exam measures the skills of engineers and covers essential data preparation tasks. It includes establishing data connections and discovering sources through tools like the OneLake data hub and the real-time hub. Candidates must demonstrate knowledge of selecting the appropriate storage type—lakehouse, warehouse, or eventhouse—depending on the use case. It also includes implementing OneLake integrations with Eventhouse and semantic models. The transformation part involves creating views, stored procedures, and functions, as well as enriching, merging, denormalizing, and aggregating data. Engineers are also expected to handle data quality issues like duplicates, missing values, and nulls, along with converting data types and filtering. Furthermore, querying and analyzing data using tools like SQL, KQL, and the Visual Query Editor is tested in this domain.
Topic 3	<ul style="list-style-type: none"> • Maintain a data analytics solution: This section of the exam measures the skills of administrators and covers tasks related to enforcing security and managing the Power BI environment. It involves setting up access controls at both workspace and item levels, ensuring appropriate permissions for users and groups. Row-level, column-level, object-level, and file-level access controls are also included, alongside the application of sensitivity labels to classify data securely. This section also tests the ability to endorse Power BI items for organizational use and oversee the complete development lifecycle of analytics assets by configuring version control, managing Power BI Desktop projects, setting up deployment pipelines, assessing downstream impacts from various data assets, and handling semantic model deployments using XMLA endpoint. Reusable asset management is also a part of this domain.

Test DP-600 Questions Answers | DP-600 Instant Download

The pass rate of DP-600 study materials are 98.95%, if you buy DP-600 study material from us, we can ensure you pass the exam successfully. Besides you can get DP-600 exam dumps in ten minutes after your payment. You can use the DP-600 exam dumps freely, if you have any questions in the process of your learning, you can consult the service staff, and they have the professional knowledge about DP-600 Learning Materials, so don't hesitate to ask for help from them.

Microsoft Implementing Analytics Solutions Using Microsoft Fabric Sample Questions (Q150-Q155):

NEW QUESTION # 150

You have a Fabric tenant that contains a warehouse named Warehouse1. Warehouse1 contains a fact table named FactSales that has one billion rows. You run the following T-SQL statement.

```
CREATE TABLE test.FactSales AS CLONE OF Dbo.FactSales;
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation:

* A replica of dbo.Sales is created in the test schema by copying the metadata only. - Yes

* Additional schema changes to dbo.FactSales will also apply to test.FactSales. - No

* Additional data changes to dbo.FactSales will also apply to test.FactSales. - No The CREATE TABLE AS CLONE statement creates a copy of an existing table, including its data and any associated data structures, like indexes. Therefore, the statement does not merely copy metadata; it also copies the data. However, subsequent schema changes to the original table do not automatically propagate to the cloned table. Any data changes in the original table after the clone operation will not be reflected in the clone unless explicitly updated.

References =

* CREATE TABLE AS SELECT (CTAS) in SQL Data Warehouse

NEW QUESTION # 151

You have a Fabric warehouse that contains a table named Sales.Orders. Sales.Orders contains the following columns.

□

You need to write a T-SQL query that will return the following columns.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

For the PeriodDate that returns the first day of the month for OrderDate, you should use DATEFROMPARTS as it allows you to construct a date from its individual components (year, month, day).

For the DayName that returns the name of the day for OrderDate, you should use DATENAME with the weekday date part to get the full name of the weekday.

The complete SQL query should look like this:

```
SELECT OrderID, CustomerID,  
DATEFROMPARTS(YEAR(OrderDate), MONTH(OrderDate), 1) AS PeriodDate,  
DATENAME(weekday, OrderDate) AS DayName  
FROM Sales.Orders
```

Select DATEFROMPARTS for the PeriodDate and weekday for the DayName in the answer area.

NEW QUESTION # 152

You have a Fabric tenant that contains a semantic model. The model contains data about retail stores.

You need to write a DAX query that will be executed by using the XMLA endpoint. The query must return the total amount of sales from the same period last year.

How should you complete the DAX expression? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 153

You have a Fabric tenant that contains a warehouse.

You use a dataflow to load a new dataset from OneLake to the warehouse.

You need to add a PowerQuery step to identify the maximum values for the numeric columns.

Which function should you include in the step?

- A. Table.Range
- **B. Table.Profile**
- C. Table.MaxN
- D. Table.Max

Answer: B

Explanation:

<https://learn.microsoft.com/en-us/powerquery-m/table-profile>

NEW QUESTION # 154

You have two Microsoft Power BI queries named Employee and Retired Roles.

You need to merge the Employee query with the Retired Roles query. The solution must ensure that rows in the Employee query that match the Retired Roles query are removed.

Which column and Join Kind should you use in Power Query Editor? To answer, select the appropriate options in the answer area.

NOTE: Each correct answer is worth one point.

Answer:

□ Explanation:
