After you buy our XK0-006 Dumps, we promise you that we will offer free update service in one year. If you fail the exam, we also promise full refund.

CompTIA Linux+ Certification Exam Sample Questions (Q72-Q77):

NEW QUESTION # 72

Which of the following best describes JSON?

- A. A file format for exchanging information or data between systems
- B. An open-source platform that facilitates the creation and administration of isolated environments
- C. A software-based technique that allows a computer to simulate one or more machines so they appear to be real
- D. A programming language that developers use to build dynamic websites

Answer: A

Explanation:

JSON (JavaScript Object Notation) is a lightweight data-interchange format that is easy for humans to read and write, and easy for machines to parse and generate. JSON is commonly used to transmit data between a server and a client, as it is language-independent and can be used in many environments.

NEW QUESTION # 73

A systems administrator wants to review the logs from an Apache 2 error.logfile in real time and save the information to another file for later review. Which of the following commands should the administrator use?

- A. `tail -f /var/log/apache2/error.log > logfile.txt`
- B. `tail -f /var/log/apache2/error.log >> logfile.txt`
- C. `tail -f /var/log/apache2/error.log | logfile.txt`
- D. `tail -f /var/log/apache2/error.log | tee logfile.txt`

Answer: D

Explanation:

Using tee allows output to be viewed in real time on the terminal while simultaneously writing it to logfile.txt. This meets both requirements: monitoring live updates and saving them for later review.

NEW QUESTION # 74

A systems administrator wants to check if the ntpd service is configured to start on startup. Which of the following commands will show that information when run?

- A. `systemctl stop ntpd.service`
- B. `systemctl is-active ntpd.service`
- C. `systemctl is-enabled ntpd.service`
- D. `systemctl start ntpd.service`

Answer: C

NEW QUESTION # 75

Following the completion of monthly server patching, a Linux administrator receives reports that a critical application is not functioning. Which of the following commands should help the administrator determine which packages were installed?

- A. `dnf history`
- B. `dnf search`
- C. `dnf list`
- D. `dnf info`

Answer: A

Explanation:

The dnf history command shows a log of past package operations (install, update, remove), allowing the administrator to review which packages were installed or updated during the patching process.

NEW QUESTION # 76

A Linux server is not starting up because files in the /boot/partition are corrupt. After the initial GRUB screen, the following message is displayed:

Probing EDD (edd=off to disable)... ok

uncompression error

--system halted

Which of the following steps should the Linux administrator take to recover the system without destroying the existing installation? (Choose two.)

- A. Replace the hard drive.
- B. Reinstall the kernel packages.
- C. Start up the system using rescue boot media.
- D. Start up in single-user mode.
- E. Increase the amount of swap memory.
- F. Reinstall the OS.

Answer: B,C

Explanation:

Using rescue boot media lets you boot the machine, mount the existing partitions, and access the corrupted /boot files without reinstalling the OS.

Reinstalling the kernel packages restores the missing or corrupt files in /boot (e.g., vmlinuz and initramfs), allowing GRUB to load and uncompress the kernel properly.

NEW QUESTION # 77

.....

Certification has become a prerequisite for employment and career growth in the CompTIA industry for reputable companies. To advance comfortably in your career, passing the XK0-006 exam is a valuable validation of your expertise. However, many test takers struggle to find updated CompTIA Linux+ Certification Exam(XK0-006) dumps and fail to prepare effectively in a short period, resulting in a loss of time, money, and motivation.
