## GH-200 Top Dumps | GH-200 Valid Braindumps

As we enter into such a competitive world, the hardest part of standing out from the crowd is that your skills are recognized then you will fit into the large and diverse workforce. The GH-200 certification is the best proof of your ability. However, it's not easy for those work officers who has less free time to prepare such an GH-200 Exam. Here comes GH-200 exam materials which contain all of the valid GH-200 study questions. You will never worry about the GH-200 exam.

## Microsoft GitHub Actions Sample Questions (Q59-Q64):

### NEW QUESTION # 59

When should you use the GITHUB\_TOKEN in a workflow?

- A. when you want to access repository-level secrets
- B. when you want to connect to the runner via SSH
- C. when you want to call an action from the marketplace
- D. when you want to make authenticated calls to the GitHub API

**Answer: D**

Explanation:

Use GITHUB\_TOKEN for authentication in workflows

At the start of each workflow job, GitHub automatically creates a unique GITHUB\_TOKEN secret to use in your workflow. You can use the GITHUB\_TOKEN to authenticate in the workflow job.

Reference:

[https://docs.github.com/en/actions/tutorials/authenticate-with-github\\_token](https://docs.github.com/en/actions/tutorials/authenticate-with-github_token)

### NEW QUESTION # 60

In which of the following scenarios should you use self-hosted runners? (Each correct answer presents a complete solution. Choose two.)

- A. when jobs must run for longer than 6 hours
- B. when you want to use macOS runners
- C. when a workflow job needs to install software from the local network
- D. when GitHub Actions minutes must be used for the workflow runs
- E. when the workflow jobs must be run on Windows 10

**Answer: A,C**

Explanation:

[B] You can use self-hosted runner to run more than 6 hours job.

Self-hosted runners give you the opportunity to persist whatever you like for your jobs and not be subject to the six-hour time-out in hosted virtual environments.

[C] Give you more control of hardware, operating system, and software tools than GitHub-hosted runners provide.

All runners can run Linux, Windows, or macOS.

<https://docs.github.com/en/enterprise-cloud@latest/actions/concepts/runners/self-hosted-runners>

### NEW QUESTION # 61

Which step is using the dbserver environment variable correctly?

- A. steps:  
- name: Hello world  
run: echo \$dbserver  
environment:  
dbserver: orgserver1
- B. steps:  
- name: Hello world  
run: echo \$dbserver  
env:  
dbserver: orgserver1
- C. steps:  
- name: Hello world  
run: echo \$dbserver  
env:  
- name: dbserver  
value: orgserver1
- D. steps:  
- name: Hello world  
run: echo \$dbserver  
variables:  
dbserver: orgserver1

**Answer: B**

Explanation:

Store information in variables

GitHub sets default variables for each GitHub Actions workflow run. You can also set custom variables for use in a single workflow or multiple workflows.

Defining environment variables for a single workflow

To set a custom environment variable for a single workflow, you can define it using the `env` key in the workflow file. The scope of a custom variable set by this method is limited to the element in which it is defined. You can define variables that are scoped for:

The entire workflow, by using `env` at the top level of the workflow file.

The contents of a job within a workflow, by using `jobs.<job_id>.env`.

A specific step within a job, by using `jobs.<job_id>.steps[*].env`.

<https://docs.github.com/en/actions/how-to/write-workflows/choose-what-workflows-do/use-variables>

### NEW QUESTION # 62

As a developer, what options should you recommend to implement standards for automation reuse? (Choose two.)

- A. Create reusable actions and workflows that can be called from other workflows.
- B. Create workflow templates and store them in the organization's `.github` repository.
- C. Create a marketplace partition to publish reusable automation for the company.
- D. Store shared corporate actions in subfolders in a defined and documented internally accessible repository.

**Answer: A,B**

Explanation:

Creating workflow templates in the organization's `.github` repository allows the organization to standardize workflows and make them easily reusable across multiple repositories. This ensures consistency and simplifies maintenance.

Creating reusable actions and workflows that can be called from other workflows helps modularize and standardize automation tasks. These reusable components can be maintained centrally and called from different workflows across repositories.

### NEW QUESTION # 63

As a developer, you need to add the correct syntax to allow the following workflow file to be triggered by multiple types of events.

Which two code blocks should you add starting at line 5?

(Each correct answer presents a complete solution. Choose two.)

- A. `on: [push, commit]`
- B. `on:`  
`branches:`  
`- 'main'`  
`- 'dev'`
- C. `on: [push, pull_request]`
- D. `on:`  
`push:`  
`branches:`  
`- main`  
`release:`  
`types:`  
`- created`
- E. `on:`  
`env:`  
`- 'prod'`  
`- 'qa'`  
`- 'test'`
- F. `on:`  
`schedule:`  
`- cron: '*/*15 * * * *'`  
`initiate:`  
`- 'main'`

**Answer: F**

Explanation:

To automatically trigger a workflow, use `on` to define which events can cause the workflow to run.

You can define single or multiple events that can trigger a workflow, or set a time schedule. You can also restrict the execution of a workflow to only occur for specific files, tags, or branch changes.

[A] `push` and `pull_request` are both events that can trigger a workflow.

Note: Using multiple events

You can specify a single event or multiple events. For example, a workflow with the following `on` value will run when a push is made to any branch in the repository or when someone forks the repository:

`on: [push, fork]`

If you specify multiple events, only one of those events needs to occur to trigger your workflow. If multiple triggering events for your workflow occur at the same time, multiple workflow runs will be triggered.

[C] `on:schedule`

You can use `on:schedule` to define a time schedule for your workflows.
