BTW, DOWNLOAD part of ExamsLabs JN0-336 dumps from Cloud Storage: <https://drive.google.com/open?id=1vnHcNovaitqJrNrK-zh7Ow9GcripQfl>

As promising learners in this area, every exam candidates need to prove self-ability to working environment to get higher chance and opportunities for self-fulfillment. Our JN0-336 practice materials with excellent quality and attractive prices are your ideal choices which can represent all commodities in this field as exemplary roles. And our JN0-336 Exam Questions can give a brand new experience on the studying styles for we have three different versions of our JN0-336 study guide.

The advantages of our JN0-336 cram guide is plenty and the price is absolutely reasonable. The clients can not only download and try out our products freely before you buy them but also enjoy the free update and online customer service at any time during one day. The clients can use the practice software to test if they have mastered the JN0-336 Test Guide and use the function of stimulating the test to improve their performances in the real test. So our products are absolutely your first choice to prepare for the test JN0-336 certification.

Get Juniper JN0-336 Dumps - 100% Success Guaranteed

Our JN0-336 practice prep provides you with a brand-new learning method that lets you get rid of heavy schoolbags, lose boring

textbooks, and let you master all the important knowledge in the process of making a question. Please believe that with JN0-336 Real Exam, you will fall in love with learning. Our JN0-336 exam questions are contained in three versions: the PDF, Software and APP online which can cater to different needs of our customers.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q104-Q109):

NEW QUESTION # 104

After JSA receives external events and flows, which two steps occur? (Choose two.)

- A. Before the information is filtered, the information is formatted
- B. After the information is filtered, JSA responds with active measures
- C. Before formatting the data, the data is analyzed for relevant information.
- D. After formatting the data, the data is stored in an asset database.

Answer: A,D

Explanation:

When JSA (Juniper Secure Analytics) receives external events and flows, the typical processing steps are:

Option C. Before the information is filtered, the information is formatted.

Data formatting is an initial step in the process where raw data from events and flows is converted into a standard format that can be more easily processed and analyzed by JSA.

Option A. After formatting the data, the data is stored in an asset database.

Once the data is formatted, it is stored in an asset database. This database acts as a repository for all the formatted data, enabling JSA to perform further analysis, correlation, and eventually, to maintain a comprehensive view of the network assets and activities. These steps are part of JSA's comprehensive approach to security event management, which involves collecting, normalizing, and analyzing data to identify potential security threats and vulnerabilities efficiently.

NEW QUESTION # 105

You want to manually failover the primary Routing Engine in an SRX Series high availability cluster pair. Which step is necessary to accomplish this task?

- A. Manually request the failover and identify the secondary node
- B. Issue the set chassis cluster disable reboot command on the primary node.
- C. Adjust the priority in the configuration on the secondary node.
- D. Implement the control link recover/ solution before adjusting the priorities.

Answer: A

Explanation:

This step involves issuing a command to manually initiate a failover from the primary Routing Engine to the secondary. This can typically be done using a command like `request chassis cluster failover redundancy-group <group-number> node <node-id>`, where `<group-number>` is the redundancy group you are failing over, and `<node-id>` specifies the node to which you want to failover (usually the secondary node). This command forces the designated node to take over as primary for the specified redundancy group.

NEW QUESTION # 106

On an SRX5800, which port is used for chassis cluster out-of-band management?

- A. Txp0
- B. user-defined
- C. ge-0/0/0
- D. fxp1

Answer: B

NEW QUESTION # 107

Which method does the IoT Security feature use to identify traffic sourced from IoT devices?

- A. The SRX Series device streams metadata from the IoT device transit traffic to Juniper ATP Cloud Juniper ATP Cloud.
- B. The SRX Series device identifies IoT devices using their MAC address.
- C. The SRX Series device streams transit traffic received from the IoT device to Juniper ATP Cloud.
- **D. The SRX Series device identifies IoT devices from metadata extracted from their transit traffic.**

Answer: D

Explanation:

The metadata is used to identify the type of device, its associated activities and its threat profile. This information is used to determine the appropriate security policy for the device. For more information on IoT Security, please refer to the Juniper Security, Specialist (JNCIS-SEC) study guide.

NEW QUESTION # 108

You are troubleshooting unexpected issues on your JIMS server due to out of order event log timestamps. Which action should you take to solve this issue?

- **A. Enable time synchronization on the domain controllers.**
- B. Enable time synchronization on the client devices.
- C. Enable time synchronization on the SRX Series devices.
- D. Enable time synchronization on the JIMS server.

Answer: A

Explanation:

To solve the issue of out of order event log timestamps on your JIMS server, you should enable time synchronization on the domain controllers. JIMS (Juniper Identity Management Service) is a Windows service that collects user, device, and group information from Active Directory domains or syslog sources and provides it to SRX Series devices and CSO for identity-based security policies. JIMS relies on the timestamps of the event logs generated by the domain controllers to track user logins, logouts, and IP address changes. If the domain controllers have different or inaccurate clocks, the event logs may have out of order or incorrect timestamps, which can cause JIMS to miss or misinterpret some events and affect its accuracy and performance. Therefore, you should ensure that all the domain controllers in your network are synchronized with a reliable time source, such as an NTP server or a Windows Time service. NEW QUESTION # 109

.....

Are you still feeling distressed for expensive learning materials? Are you still struggling with complicated and difficult explanations in textbooks? Do you still hesitate in numerous tutorial materials? JN0-336 study guide can help you to solve all these questions. JN0-336 certification training is compiled by many experts over many years according to the examination outline of the calendar year and industry trends. With JN0-336 Study Guide, you only need to spend 20 to 30 hours practicing to take the exam. In addition, JN0-336 certification training has a dedicated expert who updates all data content on a daily basis and sends the updated content to the customer at the first time. Therefore, using JN0-336 guide torrent, you don't need to worry about missing any exam focus.
