# Hot Pdf NSE7_SSE_AD-25 Torrent | Pass-Sure NSE7_SSE_AD-25 Valid Test Blueprint: Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator

If you are still struggling to get the Fortinet NSE7_SSE_AD-25 exam certification, ExamsTorrent will help you achieve your dream. ExamsTorrent's Fortinet NSE7_SSE_AD-25 exam training materials is the best training materials. We can provide you with a good learning platform. How do you prepare for this exam to ensure you pass the exam successfully? The answer is very simple. If you have the appropriate time to learn, then select ExamsTorrent's Fortinet NSE7_SSE_AD-25 Exam Training materials. With it, you will be happy and relaxed to prepare for the exam.

A lot of progress is being made in the Fortinet sector today. Many companies offer job opportunities to qualified candidates, but they have specific NSE7_SSE_AD-25 certification criteria to select qualified candidates. Thus, they can filter out effective and qualified candidates from the population. Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) must be

taken and passed to become a certified individual.

NSE7_SSE_AD-25 Valid Test Blueprint, New NSE7_SSE_AD-25 Learning Materials

Candidates who want to be satisfied with the Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) preparation material before buying can try a free demo. Customers who choose this platform to prepare for the Fortinet NSE7_SSE_AD-25 Exam require a high level of satisfaction. For this reason, ExamsTorrent has a support team that works around the clock to help NSE7_SSE_AD-25 applicants find answers to their concerns.

Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q17-Q22):

NEW QUESTION # 17
Which two of the following can release the network lockdown on the endpoint applied by FortiSASE? (Choose two.)

- A. When the endpoint is rebooted
- B. When the endpoint connects to the FortiSASE tunnel
- C. When the endpoint is determined as on-net
- D. When the endpoint is determined as compliant using ZTNA tags

Answer: B,D

Explanation:
FortiSASE releases network lockdown when the endpoint re-establishes the tunnel connection or when it is verified as compliant through ZTNA tag evaluation, ensuring it meets security posture requirements.

NEW QUESTION # 18
What is the purpose of the grace period for off-net endpoints in the FortiSASE Network Lockdown feature?
(Choose one answer)

- A. To bypass security policies for specific applications
- B. To allow users to attempt VPN reconnection before restrictions are applied1
- C. To permanently block network access for non-compliant endpoints
- D. To automatically reset the FortiClient configuration

Answer: B

Explanation:
In the FortiSASE architecture, Network Lockdown is a security feature designed to prevent off-net (off-fabric) endpoints from accessing the internet or local network without the protection of the SASE security stack.
* Triggering Lockdown: When an endpoint is determined to be "off-net"-meaning it does not satisfy the on-net rule sets defined in its endpoint profile-a timer starts for a configurable grace period.
* Function of the Grace Period: During this period, the endpoint maintains full access to the LAN and the internet.4 The specific purpose of this grace period is to provide the user with a window of time to attempt a connection to the FortiSASE VPN tunnel or an alternate corporate tunnel.5 This ensures that users can authenticate and regain a secure "on-net" status before any connectivity restrictions are enforced.
* Enforcement: If the grace period expires and the endpoint has failed to establish a VPN connection, FortiClient enforces a strict lockdown.7 In this state, the device cannot reach the LAN or the internet, except for specifically defined "Exempt Destinations" (such as captive portal login pages or the FortiSASE portal itself).
* Resetting the Timer: Any attempt to connect to the tunnel during the grace period resets the timer, providing additional opportunities for the user to remediate their connection status.8 According to the FortiSASE 25 Administrator Study Guide, the grace period is an essential user-experience setting that balances strict "zero-trust" security with the practical need for users to access the network briefly to establish their secure tunnel.

NEW QUESTION # 19
Refer to the exhibits.

A FortiSASE administrator has configured an antivirus profile in the security profile group and applied it to the internet access policy.
Remote users are still able to download the eicar.com-zip file from https://eicar.org.
Traffic logs show traffic is allowed by the policy.
Which configuration on FortiSASE is allowing users to perform the download?

- A. Web filter is allowing the traffic.
- B. Force certificate inspection is enabled in the policy.
- C. IPS is disabled in the security profile group.
- D. The HTTPS protocol is not enabled in the antivirus profile.

Answer: B

Explanation:
The core of this issue lies in the difference between Certificate Inspection and Deep SSL Inspection within the FortiSASE security framework.
* The Limitation of Certificate Inspection: When "Force Certificate Inspection" is enabled in a FortiSASE firewall policy, the system only inspects the SSL handshake-specifically the SNI (Server Name Indication) and certificate headers. It does not decrypt the actual data payload of the HTTPS session.
* Antivirus Scanning Requirements: To detect and block malicious files like the EICAR test file when they are downloaded over an encrypted HTTPS connection (such as https://eicar.org), the FortiSASE antivirus engine must be able to "see" inside the encrypted tunnel. This requires Deep Inspection (Full SSL Inspection), where FortiSASE acts as a "man-in-the-middle" to decrypt, scan, and then re-encrypt the traffic.
* Exhibit Analysis: The Secure Internet Access policy exhibit clearly shows the toggle for Force Certificate Inspection is enabled (set to "ON"). As specified in the Fortinet technical documentation, enabling this option forces the policy to use Certificate Inspection only, overriding any Deep Inspection settings that might be defined in the Profile Group.
* Conclusion: Because the traffic is only undergoing certificate-level inspection, the antivirus engine cannot analyze the encrypted eicar.com-zip file payload, allowing the download to proceed even though an antivirus profile is active in the group.

NEW QUESTION # 20
Which two benefits come from integrating SoCaaS with FortiSASE? (Choose two answers)

- A. Provides bandwidth usage analytics
- B. Centralized visibility of all threat events
- C. Continuous threat monitoring of all connected endpoints
- D. Eliminates the need of endpoint projection software

Answer: B,C

NEW QUESTION # 21
Refer to the exhibits.

A FortiSASE administrator has configured FortiSASE as a spoke to a FortiGate hub. The tunnel is up to the FortiGate hub.
However, the remote FortiClient is not able to access the web server hosted behind the FortiGate hub. What is the reason for the access failure? (Choose one answer)

- A. The server subnet BGP route was not received on FortiSASE.
- B. A private access policy has denied the traffic because of failed compliance.
- C. The hub is not advertising the required routes.
- D. The hub firewall policy does not include the FortiClient address range.

Answer: D

Explanation:
Based on the detailed analysis of the provided exhibits (image_65feb6.jpg), the connectivity failure is caused by a mismatch in the Hub firewall policy configuration.
* Endpoint Analysis: The Network Diagram shows the FortiClient endpoint has an IP address of
100.65.80.2/20 and currently carries the FortiSASE-Compliant ZTNA tag.

* FortiSASE Policy Validation: The Private access policy on FortiSASE shows an "Accept" rule for traffic originating from "FortiSASE-Compliant" sources destined for "All Private Access Traffic". This confirms the traffic is successfully leaving the FortiSASE PoP.
* Routing Validation: The Learned BGP Routes on FortiSASE table shows the prefix 10.160.160.0/24 (the Server subnet) is correctly received via Next Hop 10.11.11.1. Routing is correctly established.
* Hub Firewall Policy Error: Examining the Hub firewall policy (edit 7), the srcaddr is set to " SASE_Remote_Access". Looking at the address object definition for "SASE_Remote_Access," it is configured with the subnet 10.11.11.0 255.255.255.0.
* The Conflict: The FortiClient's actual IP address (100.65.80.2) does not fall within the 10.11.11.0/24 range defined in the policy's source address. On a FortiGate hub, for traffic to be permitted through the tunnel to the internal server, the firewall policy must include the specific subnet assigned to the remote clients, not just the tunnel interface subnet. Because the FortiClient address range is missing from the hub's policy, the traffic is dropped at the hub.

NEW QUESTION # 22

......

NSE7_SSE_AD-25 questions and answers are written to the highest standards of technical accuracy by our professional experts. With our NSE7_SSE_AD-25 free demo, you can check out the questions quality, validity of our Fortinet practice torrent before you choose to buy it. You just need 20-30 hours to study with our NSE7_SSE_AD-25 practice dumps, and you can attend the actual test and successfully pass. The NSE7_SSE_AD-25 vce torrent will be the best and valuable study tool for your preparation.
