Reliable CIS-PA Braindumps Free - Test CIS-PA Centres

CIS-PA materials trends are not always easy to forecast, but they have predictable pattern for them by ten-year experience who often accurately predict points of knowledge occurring in next CIS-PA preparation materials. Our professional experts can give you the latest and the most accurate CIS-PA Training Material for that they have beening in this filed for so many years and know every aspect of the change of CIS-PA practice questions. You can trust in our CIS-PA learning braindump for sure.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q23-Q28):

NEW QUESTION # 23

What is the default aggregation for the Metric tile in a Data Visualization?

- A. AVERAGE
- **B. COUNT**
- C. MIN
- D. SUM

Answer: B

Explanation:

In Platform Analytics data visualizations, the Metric tile is designed to display a single summarized value. By default, the aggregation used for a Metric tile is COUNT. This means the tile displays the total number of records or scores returned by the data source unless the aggregation is explicitly changed by the user.

COUNT is the most commonly used aggregation because Metric tiles are often used to show key headline numbers such as total incidents, open requests, or completed tasks. Other aggregations like AVERAGE, MIN, or SUM are available options, but they must be manually selected during configuration. ServiceNow documentation confirms that COUNT is the default aggregation applied to Metric visualizations, making option A the correct answer.

NEW QUESTION # 24

How can a Breakdown be applied to multiple Indicators based on different Facts tables?

- A. Create a separate breakdown record for each indicator facts table
- B. Configure the indicators to use the same indicator source
- C. Create a mapping script to define the relationship between the indicator facts tables and the breakdown source
- **D. Create a separate breakdown mapping for each indicator facts table**

Answer: D

Explanation:

A single Breakdown can be reused across multiple indicators—even when those indicators are based on different facts tables—by creating a separate Breakdown Mapping for each indicator facts table.

The Breakdown defines what is being analyzed, while the Breakdown Mapping defines how the indicator facts relate to the breakdown source. Because different facts tables may store data differently, each requires its own mapping configuration. A scripted mapping is only required when no direct relationship exists, not simply because facts tables differ. ServiceNow documentation clearly states that reuse across facts tables is achieved through multiple mappings, making option D the correct answer.

NEW QUESTION # 25

Which configuration confirms that an Automated Breakdown is using a Bucket Group?

- A. The Facts table of the Breakdown is set to [pa_buckets]
- B. The Related list conditions of the Breakdown Source identify the Bucket Groups
- C. The Default elements filter of the Breakdown specifies the Bucket Groups
- **D. The Facts table of the Breakdown Source is set to [pa_buckets]**

Answer: D

Explanation:

An Automated Breakdown is confirmed to be using a Bucket Group when the Facts table of the Breakdown Source is set to Bucket [pa_buckets]. Bucket Groups define how numeric or duration values are grouped, but the actual bucketed analytics data is stored in the pa_bucket table during data collection.

The Breakdown Source is responsible for defining where the breakdown facts originate. If its Facts table is pa_buckets, this indicates that the breakdown is based on bucketed values generated by a Bucket Group. The Breakdown record itself does not define the facts table, and default element filters or related list conditions do not establish the use of bucket data.

ServiceNow Platform Analytics documentation clearly states that all bucket-based breakdowns must reference pa_buckets at the Breakdown Source level, making option C the correct and definitive answer.

NEW QUESTION # 26

Which method in ServiceNow can be used to calculate the rate of performance per reporting period using time series aggregations?

- A. pa.getChange()
- B. pa.getIndicator()
- C. pa.getRate()
- D. gs.getDuration()

Answer: C

Explanation:

The pa.getRate() method is used in Platform Analytics to calculate rates of performance over time, such as incidents resolved per day, requests closed per week, or changes per reporting period. This method works on time series data and applies aggregation logic to derive a rate rather than a raw count or sum.

pa.getChange() is used to calculate the difference between two data points, not a rate. pa.getIndicator() retrieves indicator metadata and does not perform calculations. gs.getDuration() is a general-purpose GlideSystem utility for calculating durations and is unrelated to analytics time series processing. ServiceNow documentation clearly identifies pa.getRate() as the appropriate API for rate-based calculations using historical indicator scores, making option D the correct answer.

NEW QUESTION # 27

What configuration setting should be used to run a Historical Collection Job?

- A. Weekly
- B. Daily
- C. Once or On Demand
- D. Monthly

Answer: C

Explanation:

A Historical Collection Job is designed to collect past data for a defined historical period and is typically executed on demand. Unlike scheduled collection jobs (daily, weekly, or monthly), historical jobs are not intended to run repeatedly.

ServiceNow documentation specifies that historical collections are initiated manually to backfill data for indicators that were created after records already existed. Running them on a recurring schedule could lead to duplicated or incorrect data. Therefore, the correct configuration is Once or On Demand, making option A the correct answer.

NEW QUESTION # 28

.....

Everyone has a utopian dream in own heart. Dreams of imaginary make people feel disheartened. In fact, as long as you take the right approach, everything is possible. You can pass the ServiceNow CIS-PA Exam easily. Why? Because you have Actual4Labs's ServiceNow CIS-PA exam training materials. Actual4Labs's ServiceNow CIS-PA exam training materials are the best training materials for IT certification. It is famous for the most comprehensive and updated by the highest rate. It also can save time and effort. With it, you will pass the exam easily. If you pass the exam, you will have the self-confidence, with the confidence you will succeed.
