질문 # 18

You have configured the performance SLA with the probe mode as Prefer Passive.
What are two observable impacts of this configuration? (Choose two.)

- A. During passive monitoring, the SLA performance rule cannot detect dead members.
- B. FortiGate passively monitors the member if ICMP traffic is passing through the member.
- C. FortiGate can offload the traffic that is subject to passive monitoring to hardware.
- D. After FortiGate switches to active mode, the SLA performance rule falls back to passive monitoring after 3 minutes.
- E. FortiGate passively monitors the member if TCP traffic is passing through the member.

정답: B,E

설명:

FortiGate passively monitors the member if TCP traffic is passing through the member # With Prefer Passive mode, FortiGate inspects existing traffic (like TCP flows) to measure performance metrics without generating its own probes.
FortiGate passively monitors the member if ICMP traffic is passing through the member # Similarly, when ICMP flows exist, FortiGate uses them for SLA checks.

질문 # 19

Refer to the exhibit. An administrator configures SD-WAN rules for a DIA setup using the FortiGate GUI. The page to configure the source and destination part of the rule looks as shown in the exhibit. The GUI page shows no option to configure an application as the destination of the SD-WAN rule Why?

- A. FortiGate allows the configuration of applications as the destination of SD-WAN rules only on the CLI.
- B. You must enable the feature first using the GUI menu System > Feature Visibility.
- C. You must enable the feature on the CLI.
- D. You cannot use applications as the destination when FortiGate is used for a DIA setup.

정답: D

질문 # 20

Refer to the exhibit, which shows the SD-WAN rule status and configuration.

Based on the exhibit, which change in the measured latency will first make HUB1-VPN3 the new preferred member?

- A. When HUB1-VPN1 has a latency of 200 ms
- B. When HUB1-VPN3 has a latency of 80 ms

- C. When HUB1-VPN3 has a latency of 90 ms
- D. When HUB1-VPN3 has a lower latency than HUB1-VPN1 and HUB1-VPN2

정답: A

설명:

The rule is in priority mode with HUB1-VPN1 (seq 4) as the first preferred member, HUB1-VPN2 second, and HUB1-VPN3 third. Latency itself does not cause HUB1-VPN3 to become preferred unless a higher-priority member fails SLA. If HUB1-VPN1's latency exceeds the SLA threshold (here simulated by latency reaching 200 ms), FortiGate stops using it and moves down the priority list. That is when HUB1-VPN3 could become the active path.

질문 # 21

Refer to the exhibit. An administrator checks the status of an SD-WAN topology using the FortiManager SD-WAN monitor menus. All members are configured with one or two SLAs. Which two conclusions can you draw from the output shown? (Choose two.)

- A. This SD-WAN topology contains only two branch devices.
- B. branch2_fgt establishes six tunnels to the hubs and they are all up.
- C. One member of branch2_fgt is missing the SLAs.
- D. The template view should be used to see the hub devices.

정답: A,C

설명:

The monitor shows only two devices (branch1_fgt and branch2_fgt), indicating the topology contains two branch devices. HUB1-VPN2 under branch2_fgt has an orange X, indicating it's up but not meeting SLA requirements - likely due to missing or failing SLA targets.

질문 # 22

Refer to the exhibit.

The administrator used the SD-WAN overlay template to prepare an IPsec tunnels configuration for a hub-and-spoke SD-WAN topology. The exhibit shows the FortiManager installation preview for one FortiGate device. Based on the exhibit, which statement best describes the configuration applied to the FortiGate device?

- A. It is a hub device. It can send ADVPN shortcut offers.
- B. It is a spoke device that establishes dynamic IPsec tunnels to the hub. It can send ADVPN shortcut requests.
- C. It is a hub device. It will automatically discover the spoke devices and add them to the SD-WAN topology.
- D. It is a spoke device that establishes dynamic IPsec tunnels to the hub. The local subnet range is 10.10.128.0/23.

정답: A
