Test Integration-Architect Dumps.zip | Integration-Architect Vce Exam

Many people would like to fall back on the most authoritative company no matter when they have any question about preparing for Integration-Architect exam. Our company is definitely one of the most authoritative companies in the international market for Integration-Architect exam. What's more, we will provide the most considerate after sale service for our customers in twenty four hours a day seven days a week, therefore, our company is really the best choice for you to buy the Integration-Architect Training Materials.

Salesforce Certified Integration Architect Sample Questions (Q123-Q128):

NEW QUESTION # 123

Northern Trail Outfitters (NTO) is planning to create a native employee-facing mobile app with the look and feel of Salesforce Lightning Experience. The mobile app needs to integrate with NTO's Salesforce org. Which Salesforce API should be used to implement this integration?

- A. User Interface API
- B. REST API
- C. Connect REST API

Answer: A

Explanation:

When building custom mobile or web applications that aim to replicate the look and feel of Salesforce Lightning Experience, the User Interface (UI) API is the architecturally recommended choice.

The UI API is specifically designed to provide the metadata and data needed to build high-fidelity user interfaces. Unlike the standard REST API (Option B), which returns raw record data, the UI API returns both data and metadata in a single response.

This includes information about page layouts, field-level security, picklist values, and localized labels. By using the UI API, the mobile app can dynamically render fields according to the user's permissions and the organization's layout configurations, ensuring that the custom app stays in sync with changes made in Salesforce Setup without requiring code updates in the mobile app. Connect REST API (Option A) is primarily used for Chatter, Communities (Experience Cloud), and CMS content, and while it is useful for those specific social features, it does not provide the layout and record-level metadata required for a full CRM interface. The UI API is the same underlying technology that powers the Salesforce mobile app and Lightning Experience itself. Therefore, utilizing this API allows NTO's developers to build a native app that perfectly mimics the Lightning Experience while reducing the amount of custom logic needed to handle complex Salesforce UI requirements.

NEW QUESTION # 124

Which three considerations should an Integration Architect consider when recommending Platform Event as a Integration solution?
Choose 3 answers

- A. Inability to create a Lightning record page for platform events.
- B. When you delete an event definition, it's permanently removed and can't be restored.
- C. You can use Event Monitoring to track user activity, such as logins and running reports.
- D. Inability to query event messages using SOQL
- E. Subscribe to an AssetToken Event stream to monitor OAuth 2.0 authentication activity. C

Answer: A,B,D

NEW QUESTION # 125

Northern Trail Outfitters (NTO) has recently changed their Corporate Security Guidelines. The guidelines require that all cloud applications pass through a secure firewall before accessing on-premise resources. NTO is evaluating middleware solutions to integrate cloud applications with on-premise resources and services.

What are two considerations an Integration Architect should evaluate before choosing a middleware solution?

Choose 2 answers

- A. The middleware solution enforces the OAuth security protocol.
- B. The middleware solution is capable of establishing a secure API gateway between cloud applications and on-premise resources.
- C. An API gateway component is deployable behind a Demilitarized Zone (DMZ) or perimeter network.
- D. The middleware solution is able to interface directly with databases via an ODBC connection string.

Answer: B,C

NEW QUESTION # 126

An Enterprise Customer is planning to implement Salesforce to support case management. Below, is their current system landscape diagram

Considering Salesforce capabilities, what should the Integration Architect evaluate when integrating Salesforce with the current system landscape?

- A. Integrating Salesforce with Data Warehouse, Order Management and Email Management System
- B. Integrating Salesforce with Email Management System, Order Management System and Case Management System
- C. Integrating Salesforce with Order Management System, Email Management System and Case Management System
- D. Integrating Salesforce with Order Management System, Data Warehouse and Case Management System

Answer: A

NEW QUESTION # 127

A large enterprise customer operating in a high regulated industry is planning to implement Salesforce for customer facing associates in both Sales and Service, and back-office staff. The business processes that Salesforce supports are critical to the business.

Salesforce will be integrated to multiple back-office systems to provide a single interface for associates.

Reliability and monitoring of these integrations are required as associates support customers.

Which integration solution should the architect consider when planning the implementation?

- A. Build a custom integration gateway to support back-office system integrations and ensure reliability and monitoring capabilities.
- **B. Leverage Middleware for all back-office system integrations ensuring real time alerting, monitoring and reporting capabilities.**
- C. Decouple back-office system callouts into separate distinct services that have inbuilt error logging and monitoring frameworks.
- D. Architect Services in back-office systems to support callouts from Salesforce and build reliability, monitoring and reporting capabilities.

Answer: B

Explanation:

Leveraging Middleware for all back-office system integrations ensuring real time alerting, monitoring and reporting capabilities is the best integration solution for this scenario. Middleware is a software layer that acts as an intermediary between Salesforce and other systems, providing a common platform for data transformation, routing, orchestration, security, error handling, logging, and monitoring. Middleware can help to ensure reliability and performance of the integrations, as well as provide visibility and control over the integration processes. Middleware can also support various integration patterns and protocols, such as SOAP, REST, JMS, etc. Reference: Salesforce Integration Architecture Designer Resource Guide, page 14

NEW QUESTION # 128

.....

Different from other similar education platforms, the Integration-Architect study materials will allocate materials for multi-plate distribution, rather than random accumulation without classification. How users improve their learning efficiency is greatly influenced by the scientific and rational design and layout of the learning platform. The Integration-Architect study materials are absorbed in the advantages of the traditional learning platform and realize their shortcomings, so as to develop the Integration-Architect Study Materials more suitable for users of various cultural levels. If just only one or two plates, the user will inevitably be tired in the process of learning on the memory and visual fatigue, and the Integration-Architect study materials provided many study parts of the plates is good enough to arouse the enthusiasm of the user, allow the user to keep attention of highly concentrated.
