A Cisco ACI environment is configured to integrate with a vCenter environment using the VMM domain name west_coast_VMM. Within the ACI environment, only tenant west_coast has EPGs associated with west_coast_VMM. This deployment is new, so these EPGs currently do not have any members. A systems engineer is setting up vCenter, creates a VDS named west-coast-VMM, and deletes the VDS named west_coast_VMM. NEW QUESTION # 214

What happens to the traffic flow when the Cisco ACI fabric has a stale endpoint entry for the destination endpoint?

- **A. The leaf switch sends the traffic to the wrong destination leaf.**
- B. The leaf switch does not learn the source endpoint through data plane learning.
- C. The leaf switch drops the traffic that is destined to the endpoint.
- D. The leaf switch floods the traffic to the endpoint throughout the fabric.
