## 2023 Juniper JNCIA-DevOps JN0-223☒☒☒☒☒☒-killtest

IT初心者におすすめの資格を紹介

note

참고: Itexamdump에서 Google Drive로 공유하는 무료, 최신 JN0-253 시험 문제집이 있습니다:  
[https://drive.google.com/open?id=1b87U\\_qUfBnOdThaDmrxvZHs2XfvenC-F](https://drive.google.com/open?id=1b87U_qUfBnOdThaDmrxvZHs2XfvenC-F)

우리 Itexamdump에서는 최고이자 최신의Juniper 인증JN0-253덤프자료를 제공 함으로 여러분을 도와Juniper 인증 JN0-253인증자격증을 쉽게 취득할 수 있게 해드립니다.만약 아직도Juniper 인증JN0-253시험패스를 위하여 고군분투하고 있다면 바로 우리 Itexamdump를 선택함으로 여러분의 고민을 날려버릴수 있습니다.

최근들어 Juniper JN0-253시험이 큰 인기몰이를 하고 있는 가장 핫한 IT인증시험입니다. Juniper JN0-253덤프는 Juniper JN0-253시험 최근문제를 해석한 기출문제 모음집으로서 시험패스가 한결 쉬워지도록 도와드리는 최고의 자료입니다. Juniper JN0-253인증시험을 패스하여 자격증을 취득하면 보다 쉽고 빠르게 승진할수 있고 연봉인상에도 많은 도움을 얻을수 있습니다.

### Juniper JN0-253덤프문제은행 - JN0-253시험패스 가능 덤프공부

우리사이트가 다른 덤프사이트보다 우수한 점은 바로 자료들이 모두 전면적이고 적중률과 정확입니다. 때문에 우리Itexamdump를 선택함으로Juniper인증JN0-253시험준비에는 최고의 자료입니다. 여러분이 성공을 위한 최고의 자료입니다.

### Juniper JN0-253 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"><li>Juniper Mist Network Operations and Management: This domain examines operational features across Wi-Fi, Wired, WAN, Routing, and Access Assurance, delivering specialized management capabilities for different network infrastructure layers.</li></ul>
주제 2	<ul style="list-style-type: none"><li>Juniper Mist Cloud Operations: This domain covers three API types (RESTful, WebSocket, Webhook) for programmatic integration, plus support resources including ticketing systems and documentation.</li></ul>
주제 3	<ul style="list-style-type: none"><li>Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.</li></ul>
주제 4	<ul style="list-style-type: none"><li>Juniper Mist Monitoring and Analytics: This domain focuses on monitoring tools including service-level expectations, packet captures, AI-driven insights, automated alerts, and audit logs for comprehensive network visibility.</li></ul>

## 최신 JNCIA-MistAI JN0-253 무료샘플문제 (Q24-Q29):

### 질문 # 24

At which two configuration levels are WLAN objects created? (Choose two.)

- A. device level
- **B. site level**
- C. user level
- **D. org level**

정답: B,D

### 설명:

Site Level: WLAN objects can be created at the site level, allowing specific configurations for different locations within an organization. This helps in customizing WLAN settings based on the unique requirements of each site.

Org Level: WLAN objects can also be created at the organization level, which provides a standardized configuration that can be applied across multiple sites. This ensures consistency in WLAN settings throughout the entire organization.

### 질문 # 25

Exhibit:

Referring to the exhibit, which Roaming Classifier is responsible for the sub-threshold SLEs?

- A. Signal Quality
- B. Ethernet
- C. WiFi Interference
- **D. Capacity**

정답: D

### 설명:

In the Juniper Mist dashboard, Service Level Expectations (SLEs) are metrics that measure user experience in key areas such as connection, throughput, and roaming. Each SLE is composed of classifiers, which help identify the underlying cause of degraded performance or sub-threshold scores.

According to the Juniper Mist AI documentation, the Roaming SLE tracks client transitions between access points and evaluates the quality of those roaming events. The contributing classifiers typically include Signal Quality, Wi-Fi Interference, Ethernet, and Capacity. In this exhibit, the bar for Capacity is the longest under the "Roaming Classifiers" section, indicating that it has the most significant impact on the Sub-Threshold SLE value (10.6%). This means roaming performance is primarily being limited by insufficient capacity - often due to AP radio congestion or a high number of concurrent clients impacting handoff efficiency.

Hence, the Capacity classifier is responsible for the sub-threshold SLEs.

### 질문 # 26

Exhibit:

Referring to the exhibit, which SLE would an administrator investigate to troubleshoot weak signal issues?

- A. Roaming
- **B. Coverage**
- C. Successful Connects
- D. Throughput

정답: B

### 설명:

In Juniper Mist Wireless Assurance, Service Level Expectations (SLEs) are key metrics that measure different aspects of the end-user experience. Each SLE focuses on a distinct area of network performance such as Connection, Roaming, Throughput, and Coverage.

The Coverage SLE specifically measures whether wireless clients are receiving adequate signal strength (RSSI) and signal quality (SNR) from access points. According to the Juniper Mist AI Operations and SLE Analytics Guide, this metric is defined as:

"The Coverage SLE quantifies the percentage of client sessions that meet the required signal strength and quality thresholds. Low

coverage indicates areas with weak or inconsistent RF signal levels." When users experience weak signal or dead zones, the Coverage SLE provides insight into where and why these issues occur. Mist AI identifies sub-classifiers such as Signal Quality, Wi-Fi Interference, or Airtime Utilization, allowing administrators to isolate the cause of poor signal conditions. Therefore, in the exhibit shown, an administrator would investigate the Coverage SLE (79%), as it directly relates to signal weakness or RF coverage problems.

### 질문 # 27

What are three methods for requesting authentication in the Juniper Mist API? (Choose three.)

- A. Enable MFA with Okta Verify.
- B. Use OAuth2 linked to an OAuth provider.
- C. Enable basic authentication with a token.
- D. Use RADIUS certificates.
- E. Use an HTTPS login with a user name and password.

정답: B,C,E

### 설명:

The three valid methods for requesting authentication with the Juniper Mist API are:

Use an HTTPS login with a user name and password: The Mist API accepts HTTPS requests where credentials are provided directly for session/token generation and user administration.

Use OAuth2 linked to an OAuth provider: "Juniper Mist APIs offer authentication via OAuth2 with various OAuth-compatible identity providers, such as Okta, for secure and federated access." Enable basic authentication with a token: Mist APIs accept programmatic requests using tokens (API tokens or bearer tokens) for automation, scripting, and integration—each token mapping to specific scopes and user permissions.

Enabling MFA with Okta Verify enhances user portal security but is not an API authentication mechanism.

RADIUS certificates are used for infrastructure 802.1X authentication, not for API access.

Juniper Mist API Authentication Mechanisms

### 질문 # 28

Which two statements correctly describe Mist claim codes and activation codes? (Choose two.)

- A. Claim codes may be used to claim multiple APs at once.
- B. An activation code is printed on a sticker on the AP.
- C. Activation codes may be used to claim multiple APs at once.
- D. Claim codes may be used to claim only one AP.

정답: C,D

### 설명:

Claim Codes: Claim codes are unique to each AP and can be used to claim only one AP at a time. This ensures each device is correctly registered and managed individually within the Mist system.

Activation Codes: Activation codes can be used to claim multiple APs at once, facilitating bulk onboarding and simplifying the setup process for large deployments.

### 질문 # 29
